#### I. TAX REVENUE PERFORMANCE

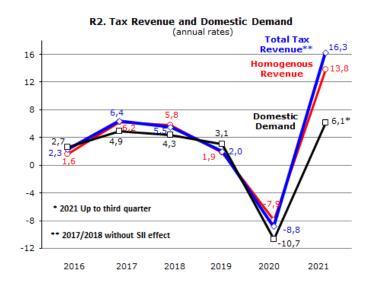

#### 1. Headlines.

Total tax collection scaled up to €37.5 billion in October, 26.3% above the same month a year earlier. Gross receipts advance was close to 23%, while the amount of refunds paid contracted by 7.1%.

October collection is the largest in the year because in addition to the usual monthly self-assessments the quarterly self-assessments, belonging to the third quarter in this case, are submitted by taxpayers and chiefly because Corporation tax second instalment, which is referred to the period April-September, is entered. Precisely, this latter shapes up the analysis as it is compared with 2020-second instalment, which was hard hit by lockdown. Due to this circumstance, the best way to evaluate October's outcome is to compare with some results seen in the same month of 2019. Thus, for instance, **October net collection in 2021 was 10.6% above such period, 8.2% the gross one**. The items that already overcame 2019 records in September, kept that distance in October, in general terms, while those that were still below 2019 paces went closing the gap noticeably. This is currently the case of VAT, which nearly reaches the levels previous to pandemic outbreak, despite the rate lowering for electricity (also in October began to be seen the effect of the rate lowering in the Tax on Electric Energy Production). About the bettering shown by revenue evolution in this month, collection from SMEs played a leading role: their gross payments grew up strongly both in payroll withholdings and in VAT and are now clearly above the figures recorded in 2019. The same can be reported about CT second instalment, despite a part of its boost was due to an extraordinary payment, as it happened in the first instalment, but even subtracting outliers, 2021 receipts are above the two first instalments in 2019 by €350 million.

Total tax Revenue climbed up by 16.3% until October (+12% the gross receipts and -3.1% the refunds). When contrasting with 2019 data, tax revenue is 4.5% higher so far (3.1% up to September). In homogeneous terms, tax revenue went up by 13.8% to date (11% until September) and is 3.6% higher than in 2019.

The impact of law and management changes was €1,392 million estimate until October. The effect from each of the measures can be found in the Table below. It has to be reminded that this Table is worked out with the aim of evaluating all those factors that could bias the year-on-year variation rates and, therefore, some of the impacts are in fact linked to measures passed in 2020.

The figure is alike to that estimated up to September (€1,501 million), though in October alterations with different signs arose. Among them, the gradual lessening of the effect brought about by the measures passed in order to ease businesses' liquidity, in force during 2020, under the first state of alert and at the end of the year, stood out. In the first case, RDLs 7, 8, 11 & 15/2020 had a negative effect in 2020 and a positive one in 2021. Their impacts were decreasing given that they brought about a deferment of payments, so that there was a high initial effect that went reducing as the debts were entered. Specifically, a good part of the deferred sums was recovered in October and this explains the significant fall of the effect in this month (slightly above €700 million). Regarding the second case (RDL 35/2020), it was an akin measure but, since it was applied in the first quarter of the current year, the effect was the opposite: it had a negative impact on revenue in April 2021 but the deferred sums were mainly recovered this October so that the effect has been reduced by nearly €200 million, compared to September. The whole impact on revenue of this set of measures contracts by €516 million if compared to the prior month.

Table 0
IMPACT OF DISCRETIONARY TAX MEASURES

Rate lowering for surgical masks (RDL 34 /2020)			- 117			- 117
Other COVID measures	- 37	- 15				- 52
Increase in tax relief for donations (RDL 17/2020)	- 37					- 37
Widening of deductions for foreign filmmaking (RDL 17/2020)		- 15				- 15
2021 Budget	108	55	242		723	1 128
Rates rise for PIT General Tax Base	108					108
Changes in art. 21 of CT Law (exemption to avoid double taxation)		55				55
Rates rise on sugary drinks			242			242
Rate rise for Insurance Premium Tax					391	391
Tax on Financial Transactions					237	237
Digital Services Tax					95	95
Other	27	- 398	- 735	- 72	- 94	-1 272
VAT rate lowering for electricity (RDL 12/2021)			- 262			- 262
Rate lowering in the Tax on Electric Energy Production (RDL 17/2021)				-72		- 72
Extraordinary receipts and refunds	27	- 398	- 473		- 94	- 938

A large portion of this shrinkage was counterbalanced by the higher influence of the law changes related to COVID products and of the extraordinary receipts and refunds. In both cases the impact takes place also because of the events happened in 2020. Regarding the first set, the effect is linked to the moments in which receipts losses began to be noticed. Relating to the second group, the impact is connected to the payment of the refunds linked to the Court ruling on RDL 2/2016, about CT instalments, which reached their peak in October 2020.

About the rest of the measures, it is worth mentioning the rates lowering on electricity and the changes in the exemption included in art. 21 of Corporation Tax Law. Concerning the first of them, the impact is €334 million up to October, from which €262 million belong to the VAT rate lowering, from 21% to 10%, to some consumptions (household's mainly) and €72 million to rate lowering from 5.11% to 0.5% in the Tax on Electric Energy Production, in force since September 16<sup>th</sup> (which is to say that the impact reflected in Table 0 matches only with half a month).

As to the modification of art 21 in Corporation Tax Law, which is being applied to CT instalments along 2021, there was a positive impact on the two first instalments of €55 million estimate overall. This figure is lower than forecasted, but two issues have to be taken into account. The first one is that the measure was estimated for the whole year without the possibility of making any consideration about the way in which the income affected by the law change is entered across the year. The second one and the most important is related to the fact that, given the strong increment of profit this year, the law change affects mainly to corporations which work out the instalments on the accounting profit, instead of on the tax base. Thus, the measure has allowed the tax base growing up by more than €1,450 million, but only a 15% of the whole increase matches with corporations which assessed the instalment on such base. The rest of the increment refers to corporations that would have payed the same amount of money for the instalment whether the law change had occurred or not and, therefore, they will notice the change when they self-assess the 2021 annual return.

#### 2. Main items evolution.

<sup>\*</sup>Rates worked out for the quarterly or annual period in which there are available data

#### • Personal Income Tax homogeneous revenue increased by 8.1% to date.

There were improvements in every item, compared to the previous month. Homogeneous accumulated pace was 7.7% by then, four tenths less than that estimated in October. The conclusion is the same when likened to 2019: the net revenue is in 2021 an 8.8% above the one recorded two years ago (8.6% until September), 7.3% homogeneous (6.8% up to the prior month).

Payroll withholdings, the main constituent of the tax, increased by 6.6% in October, the same pace scored year-to-date. Concerning the evolution of these withholdings, two groups of facts have to be considered. On the one hand, there is a distortion brought about by the comparison with the last year (due to both the lockdown in the second quarter and the outliers from some large corporations in the third quarter). On the other hand is the uneven performance of the different groups of taxpayers in the past and in the current year, differentiating not only between private and public sectors but also by groups and components within them (large vs. small businesses in the first case and salaries/pensions in the other one).

In October, payroll withholdings enlarged by 10.3% in the private sector (5.7% year-to-date; see Table A14). The growth is nearly the same than in the previous quarter but in the third quarter the rebound effect linked to activity stoppage under lockdown in 2020 has to be taken into account. Additionally, in August and in October 2020 unusually high increments in some large corporations were recorded and this explains the low growth in the set of large corporations during the third quarter (3%) and in October (0.5%), as well as the divergent

performance when compared to SMEs (+17.3% in the fourth quarter). For all these circumstances, it is advisable to compare with 2019. When it is done, it can be seen that private sector payroll withholdings are currently 4.9% above 2019, with different paces in large corporations (4.2%) and SMEs (6.1%). Nevertheless, it needs to be recalled that the improvement comes from the effective tax rates (until September, the wage bill is nearly the same than in 2019 in large corporations and more than 3% below in SMEs), as a consequence, in turn, of the deep changes seen in the sectoral structure of employment, from one year to another.

Regarding Public Administrations, the evolution is very different too, depending on the constituents (either salaries or pensions). Overall, the increase was 4% in October, which is below 7.1% accumulated in the year. The lessening comes from the salaries, which have shown such trend in the last months and that will be sharper in the last quarter of the year when it is to be compared with a period in 2020 in which there was a strong growth in employees number and in payroll thanks to the recruitments carried out in the healthcare and education sectors and because of the salaries' updating in the State Security bodies. Yet, regarding pensions, the tone is one of steadiness, hardly without any change in the last months. The accumulated increment is higher than 7%, with alike rises in pensions' bill and effective tax rate.

Concerning the rest of revenue, the boost of the payments on account from personal businesses was outstanding. As to the third quarter, entered in October, the upswing drove to a 21.8% growth. Certainly, it is being compared with periods of low activity in some of the most representative sectors within this size of business (retail, catering and haulage), but the outcome is still good when comparing to 2019 (5% above from January to October).

Regarding capital withholdings, the skyrocketing of those linked to mutual investment funds gains continued (nearly 77% in October, close to 93% to date). Withholdings on movable capital yields and on leases recorded positive rates (until October, 5.1% and 3.9% each), but they are still deep under the levels seen in 2019 (-14.1% in the first case, -7.6% in the second one).

<sup>(\*)</sup> Rates worked out for the guarterly or annual period in which there are available data.

<sup>(\*\*)</sup> Once amended the displacements to May 2020 (RDL 2020) and the higher deferments (RDLs 7, 11, 15 & 35/2020).

<sup>(1)</sup> Import VAT included.

Relating to PIT 2020 annual return campaign, summarized in Table A15, there were hardly some novelties with respect to the prior month (the last relevant changes in this item will take place with the second instalment of the positive annual returns, which will enter in the next month). As stated in previous reports, the main feature of the current campaign is the fall of both receipts (-4.2%) and refunds (-5.7%). Concerning these latter, the payment pace slowed down slightly in October and this means that the fall reflected in the Table is a little higher than the one expected for the whole year (-5.1%).

#### TABLE A15 PIT 2020 ANUAL RETURN

(data up to October)

		(€ million) PIT 2019	<b>)</b> %	Percentage on expected amounts PIT 2020 PIT 2019 Difference

ANNUAL RETURN	-1 984	-2 218	10,5%						

#### • Corporation Tax homogeneous revenue climbed up by 43.2% year-to-date.

Accumulated growth gained in October nearly 20 percentage points, compared to September. The cause for this drastic change was the submission of the second instalment, whose outcome is shown in Table A16.

CT second instalment shot up by 69.6% (together with the first instalment, this item grew by 64.2% to date). As it happened in other periods and with other items across the year, this pace is not truly significant since it comes from the contrast with the months in 2020 most hard hit by pandemic (this instalment refers to the profit gained by corporations from April to September). Yet, if the comparison is made with 2019 an increment can be seen too, 8.6% in this case (13.4% if both instalments are summed up). A part of the boost has no much to do with the operating profit but with some extraordinary transactions (a merger operation in the first instalment and assets sales by a corporation in the second), but even subtracting those unusual receipts the situation in 2021 would continue to be favourable (amending outliers the growth would still be +2%, compared to 2019). As shown in the Table, the instalment increase is particularly sharp in the Groups, fact that can be explained by the two operations mentioned before and by the deeper drop recorded in 2020. Both the strong rise in this year and the severe plunge in the last year can be explained by the weight of the minimum payment rule in these corporations (the calculation is made on the accounting profit, instead on the tax base) and by their uneven performance. The minimum payment sank by more than 50% in 2020 and increased more than fourfold now. A wider overview, comparing to 2019, shows that the accumulated instalments in Groups (without outliers) would be 2.9% above then-rate. All this is consistent with the path followed by profit up to September: without outliers, it would closely double 2020 figure and it would be alike to 2019's.

Total excluding 'other receipts'	-21,0	-33,6	-10,9	56,7	64,1			61,3
Large Corporations and Groups Groups Large Corporations	-24,9 -32,1 -14,2	-36,1 -47,0 -17,9	-12,5 -16,7 -6,4	69,9 107,5 25,7	73,3 120,8 21,4			72,1 116,0 22,9
Small corporations	-1,5	-13,9	-5,1	7,3	11,8			9,8

<sup>\*</sup> Receipts displaced to May (RDL 14/2020) and higher deferments effect (RDL 7/2020) included.

As to the rest of corporations, in those non-belonging to Groups the increment of the sum of the two first instalments was 22.9% (2.5% if compared to 2019), though the profit grew up some more (around 30%; 0.8% on 2019 figure). Regarding small-medium size corporations, the situation is quite different depending on the way of taxation. The payments of those that work out CT instalments on profit went up by more than 30% (+4.3% on 2019's), at a similar pace than their own profit. Conversely, the payments of the rest of small corporations (those that assess the instalment on the last annual return) receded close to 2%, given that they were worked out on 2020 annual return outcome. This explains that small corporations recorded the lowest growth rate among all companies (contrasting with 2019, accumulated instalments figure is currently almost the same).

#### Homogeneous VAT revenue increased by 12.8% until October.

There was a noticeable improvement in October, compared to the preceding performance. The comparison with 2020 made the growth rates lessen in the previous months, but the distance to 2019 figures, which is the best landmark, went reducing. This evolution strengthened in October so that the result was that both net and homogeneous VAT were so far only 0.2% below 2019 (2.5% and 1.3% each until September).

The improvement came hand in hand with gross VAT bettering: +11.8% in October (14.2% without receipts from closed fiscal years that, as mentioned in the law changes section, reached a high level in 2020 because of the recovery of the deferments granted in the early stages of pandemic). The good performance of these receipts can be explained by the rebound seen in the monthly self-assessments as well as by the high level shown by

<sup>\*\*</sup> Higher deferments effect (RDL 35/2020) included.

the receipts from the quarterly self-assessments related to the third quarter of the year (see Table A14). As stated before, the comparison with rates from previous months is not reliable because they were calculated on the periods of 2020 most hard hit by pandemic. Taking 2019 as the reference period, monthly receipts are currently the same, but in the quarterly SMEs self-assessments October's growth hopped and this fact allows accumulated revenue from these businesses to be now above the figure recorded in 2019 (+1.3%). With such boost, the year-to-date whole gross VAT growth is also positive when related to 2019 (+0.4%, after the previous -0.6%).

Leaving apart the economic recovery that is taking place in the last months (total sales of large and small corporations grew up by 6% in real terms, in the third quarter of the year), tax revenue increment was given further fuel by prices hike too. Both factors explain the power of gross VAT advance, although they also are behind the growth of the amount of monthly refunds claimed by taxpayers, which have increased nearly by 10% to date, with a close to 20% increment in the last two months.

#### Homogeneous Excise Taxes enlarged by 5.9% up to October.

October figure was fairly good, though it is not easy to evaluate the overall evolution of these taxes after two months of quite uneven performance linked to the erratic trend of Tobacco Excise Tax and, from this month on, to the impact of the rate lowering in Electricity Excise Tax. In addition, it was expectable a certain growth rates lessening due to the comparison with a period in which restraints were eased (it needs to be recalled that October was the month with the softest fall in 2020). Anyways, it can be stated that there has been an overall improvement because, although these taxes continue to be far away from the levels recorded in 2019, October's data has reduced that gap significantly (-6.8% from January to October, -7.6% until September). This recovery can be seen particularly in the Fuel Excise Tax, which increased by 10.6% in October. This monthly rate is the same than the year-to-date one, it is more than one point above September's accumulated rate and nearly four points above January-October in 2019, fact that allows the current collection narrowing the gap with 2019 until -7% (-8.1% up to September). The bettering was seen in the main products, more intense in gasolines (close to 11%, compared to previous 3%), which were the most hard hit in 2020, but also in diesel oil for vehicles, which for the first time in the year recorded in October a consumption level higher than that of the same month in 2019. Tobacco Excise Tax enhanced by 8.9% in October (1% to date). The increment was remarkable, especially after taking into account the comparison with what already was a high level in 2020. The level reached in October 2021 has become one of the highest in the last two years. Electricity Excise Tax plunged by 22.1% (+1.6% in the year), as the result of the rate lowering (from 5.11% to 0.5%) -in force since the second fortnight of September- passed to counterbalance the electricity prices hike, already noticeable in collection (+20.5% in September). Without rate's lowering revenue would have climbed up to 42% estimate in October. Lastly, Taxes on alcohol receded by 1.4% in contrast with the last months' rises (49.9% in September, 77.5% in August). The fall was due to the increment of refunds paid (gross receipts went up by 5.6%) and, as in other cases, because of the good outcome in October 2020. It is expected for the coming months a new rebound, which will be steady well into 2022. They accumulate a 2.6% positive growth (-15.1%, compared to 2019).

#### MAIN TAX BASES AND ACCRUED TAX REVENUE EVOLUTION

Table A17 shows the recent evolution of tax bases, accrued taxes, aggregate average rate and total tax revenue. Quarterly data for these and other related series are available on AEAT web page from 1995 onwards (section of Stats, under the names of "Recaudación Tributaria" and "Informes Mensuales de Recaudación Tributaria").

<sup>(\*)</sup> Rates worked out using the data available up to date.

<u>Main Tax Bases</u> grew up by 13.2% in the third quarter of the year. This was a pace lessening, compared to the second quarter, but it has to be considered that every growth rate is this year conditioned by 2020 bases evolution. They reached their bottom in the second quarter, due to the lockdown after pandemic outbreak, and then recovered. This is why it is better to liken with 2019: bases are in the third quarter 6.3% above then and 2.6% higher year-to-date.

Contrasting with the previous quarters, the third one was particularly good in bases linked to spending (because of the evolution of spending subject to VAT and of the softer fall in the value of the products subject to excise taxes), but in the year as a whole the disparity between the performance of income and spending remains. The evolution was better in the

former though, seemingly, it appears to be just the opposite because of the comparison with 2020. Thus, tax bases linked to income developed by 9.2% in the three first quarters of the year and they are 5.1% higher than in 2019. Conversely, tax bases linked to spending, despite scoring an accumulated growth of 17.5%, are still below 2019 bases by 0.8%.

Gross households' income went up by 4.2% in the third quarter and by 5.5% year-to-date. Comparing with 2019, the figure is currently 4.7% above the one recorded by then. As mentioned previously, though the bettering is general it is stronger, logically, in the constituents that scored the lower outcomes over the past year (private sector salaries, capital income and businesses profit). A contrast with 2019 allows bypassing this issue. After doing this, an improvement is seen in any item, particularly in businesses profit and SMEs' wage bill, though this latter (-0.3%), movable capital income (-21.5%) and income from leases (-0.5%, -11.5% those from business premises) are still under 2019 records. Conversely, income from public sources (salaries, pensions and unemployment benefit), that grows slowly in 2021 because of the high level of unemployment benefits in 2020 (including furloughed workers and self-employed aids), are nearly a 13% above 2019 figures.

Earned income and other income subject to withholdings increased by 3.1% in the third quarter and by 5% thus far. Regarding salaries, the wage bills' rises in the private and the public sectors were alike (6.9% in the former, 6% in the latter), but quite diverse their starting points in 2020 (with a sharp drop in the private sector and an increment in the public one). Despite the advance in the third quarter, private sector has not reached 2019 levels yet. Large corporations' salaries already did it, when in the second quarter they were still 0.5% under pre-pandemic figures. Currently, they have reached the levels recorded from January to September in 2019. Contrariwise, SME's levels keep below, though the distance has considerably shortened (from -5% until June to -3% up to September). What is remarkable in the public sector is the lessening trend shown in the third quarter (4.3%, far below 7% in the first half of the year). The main reason is the entry on the scene of the comparison with 2020 periods in which the new recruitments in healthcare and education sectors began to have a visible impact on income. Therefore, this trend will go on in the fourth quarter, heightened by the salaries updating in the State Security forces that took place by the final stages of 2020.

Relating to the rest of the earned income, unemployment benefits, which include payments to furloughed workers (protected by ERTEs) and aids to self-employed taxpayers, fell down by 26.9% to date. The peak was touched in the second quarter of the past year and the level has been descending from then on. The drop was deeper than 40% in the second and third quarters of 2021 but, even so, the levels are still clearly higher than those recorded in 'standard' periods (the payments summed up to €5,500 million in the third quarter of 2021, when they amounted to €3,300 million average from 2017 to 2019). On their side, pensions were the most stable constituent. Year-to-date, pensions' bill expanded by 3.5%, eight tenths attributable to population growth and the rest to the average pension rise due, as usual, to the entry in the system of new retirees with a higher average pay.

Households' capital incomes enlarged by 20.8% as a whole in the third quarter. Together with the also high advance recorded in the second quarter (28.6%), they are currently close to recover the levels seen in 2019 (they are now just 1.1% below, when they were 4.7% lower until the second quarter). Nevertheless, the global outcome is highly conditioned by the boost of capital gains, the only constituent that is presently recording higher levels than in 2019. Their features are very different from those of the other two components (income from movable capital and leases) and this allows the whole figure to offset the losses scored over the past year due to the lack of transactions in the housing market: gains that, under different circumstances, could have been arisen before, are now surfacing. Moreover, a part of the gains, those coming from mutual investment funds, which before 2020 accounted for 9% on the total, are showing outstanding growth rates, to the point of doubling the yields generated in 2019 and 2020. On its side, movable capital income grew up strongly again in the third guarter of the year (13%, 15.4% in the second quarter), but the comparison level was so low that, as commented before, this income is still below the figures recorded in 2019. Dividends paid out, which are the main constituent, improved from June to September but they kept on losing more than 20%, compared to 2019. Lastly, income from leases accumulates a 6.3% increment to date thanks to the second and third guarters' outcomes. The level is 2.5% above 2019's but the performance is markedly unalike depending on the kind of real state. Income from business premises (the vast majority of leases income subject to withholdings) rises more softly than the total (3.8%) and the level is still far away from 2019 records.

The last component is the businesses' profit. It expanded by 19.8% in the third quarter (22.3% year-to-date). The shape of the personal businesses, mainly focused on catering, accommodation, leisure and other personal services, explains the strikingly negative performance seen across the past year and, by comparison, also the strong paces scored this year. Now, when contrasting with 2019, once passed the third quarter, income from economic activities surpassed the levels of 2019 (+1.5%). In aggregate terms, this is certainly a tiny advance but, considering that there are sectors that have not recovered normalcy yet (the number of foreign tourists has not gone back to then-records), the outcome can be described as good.

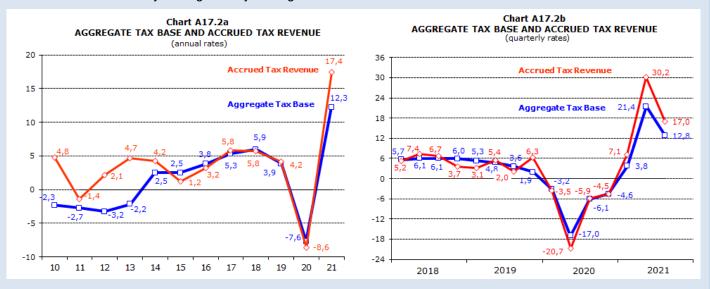

Corporation Tax consolidated base boosted by 34.5% until September. It has to be reminded again that it is being compared with the worst outcome in 2020 (in the second instalment, which is the source for the available information, the period assessed was April-September, matching with the months most hard hit by pandemic in 2020). Contrasting with 2019, the growth is softer, but still significant (7.2%). Profit increment was much higher (68.6%), in the same way that the plunge was deeper in 2020. Besides, a part of the augment hast to do with extraordinary transactions (a merger operation, on one hand, and assets sales by a large company, on the other hand). If the reference was 2019, profit would have gone up by 6.4% until September (2.6% without outliers). Paying attention to the size of the corporations, the Groups shown the most enhancing paces (5.6% the tax base and 11.4% the profit, above 2019 figures), higher than the large corporations non-belonging to Groups (4.9% and 2.5% each).

Regarding, bases linked to spending, <u>Spending subject to VAT</u> increased by 13.1% in the third quarter and this means that, up-to-date, it is already reaching the levels recorded in 2019 (comparing with 2019 quarters, the first and the second one were 3% below in 2021, while the third one is 6% above). This achievement is even more valuable if the hits struck by Filomena storm and by the high number of infections at the beginning of the year are considered. Though 2021 growth is being more intense in the households' spending, this has not returned yet to 2019 values (-1.8%). The other two constituents are the ones that are pushing up the spending level to reach 2019 records. In the case of brand new home purchasing, the increment is 17.5% to date, high pace that can be explained by the sales stoppage that took place in the last year, though it means also a relevant advance compared to 2019 (+9%). On the other hand, Public Administrations' spending went up at a similar pace than in 2020 (4.3% until the third quarter, 4.4% accumulated in 2020 at the end of the year).

Concerning the <u>Value of the Products subject to Excise Taxes</u>, the shape in the last two quarters is alike to that of the spending subject to VAT (21.7% in the third quarter and 35.9% in the second one), but year-to-date increase is lower (14.9%) and there is still a gap with pre-pandemic records (the value is currently 5.4% below 2019). There was also

in the third quarter a significant advance over the first half outcome, though in every item physical consumptions were still below 2019 figures (regarding Tobacco Excise Tax, this is true for cigarettes consumptions but it is not for other products). In addition, the weightiest prices in the calculation of the value of the products subject to these taxes, those of gasolines and diesel oil for vehicles, were higher than in 2019 only in the third quarter of the year.

Accrued Taxes boosted by 17.4% up to September (16.9% without annual returns). The growth rate is some lower in the main taxes (17.1%) due to the inclusion within the whole figure of the new taxes on Financial Transactions and on Digital Services and to the legal changes passed in the Insurance Premium Tax (see Table 0). A part of the increment has to do with an effective tax rate rise in the main taxes. It went up by 4.2%, on the one hand, because of the bounce back in CT instalments effective tax rate (due to the higher weight of the minimum payment rule and to some extraordinary transactions, as the merger operation in the first instalment and the sales of assets by a large corporation in the second one). On the other hand, it was driven by an internal rearrangement in the households' income, with a decreasing weight of the perceptions subject to close-to-zero rate. Thus, the effective tax rate lowering situation seen in the last year is gradually turning around.

Accrued Personal Income Tax ramped up by 10.1% until the third quarter of the year (7.8% without the annual return outcome, 6.4% when compared to the same period in 2019). Tax bases growth remained as the main cause of the enhancement, albeit an increasing contribution of the effective tax rate is being noticed. Regarding earned income and other income subject to withholdings, the weight of the benefits on the total has gone downwards since the second quarter of the year, pushing up the effective tax rate, to what the increment of the average compensations and tax rates in pensions and, to a lesser extent, in public salaries, are added. Conversely, the bettering in employment numbers and in the wage bill in activities with salary levels and, therefore, tax rates below average drives to an effective tax rates lessening. The outcome is an augment of the tax rate in 2021, not only comparing with the same period in 2020 but also contrasting with 2019. Hence, private sector withholdings keep on overcoming the figures recorded two years ago, despite the wage bill level is not totally recovered yet (same level in large corporations and -3% in SMEs). As to capital withholdings, current figures remain below those seen in 2019, in spite of the noticeable increment in the income subject to taxation in the two last quarters.

Accrued Corporation Tax shot up by 55.6% up to September (58.4% without annual return). Instalments evolution (62%, 45.8% without extraordinary receipts), driven by tax bases bettering and the higher weight of the minimum payment rule, explains this boost. As it had already happened in the first instalment, consolidated Groups were the kind of corporations that recorded the highest pace in the second instalment (more than doubled the figure self-assessed a year earlier) followed by the large corporations non-belonging to Groups (22.7% to date), while small corporations grew by 9.2% (33.1% those that work the instalments out on the current profit, 1.2% those that use the

last annual return to do it).

Accrued VAT enhanced by 17.7% in the first three quarters of the year, growth rate that is in tune with the spending subject to VAT (17.9%), while the level is aligned with that achieved in 2019 (-0.1%). Gross VAT evolution in the third quarter was positive (13.6%), with a stronger recovery in the quarterly self-assessments, 17.2%, which come from those sectors most hard hit by restraints to mobility, than in the monthly self-assessments (12%). Thanks to these evolutions, the pre-pandemic levels has been already overcome. There is currently a 1.3% advance from January to September when comparing to the same period in 2019 (1.6% in the monthly self-assessments, 0.8% in the quarterly self-assessments). This recovery is backed by a sales augment together with a prices hike, factors that explain also the intense increase in the amount of monthly refunds claimed by taxpayers in the third quarter (15.5%, 9.5% accumulated), which is now 3.6% higher than in the same period of 2019. Despite this, net accrued VAT is currently 0.8% above the figure recorded two years ago.

Accrued Excise Taxes enlarged by 7.8% in the third quarter, 9.2% until September, and it is the only group of taxes that has not reached yet the levels recorded in 2019 (-6.4%). Fuel Excise Tax grew up by 13.5% in the third quarter and this was a percentage lower than the drop scored a year before, so that the tax touched not yet the figure achieved in 2019 (-7.4%). The recovery continued being more intense in gasolines than in diesel-oil for vehicles. Accrued Tobacco Excise Tax increased by 2.4% in the last three guarters (2.8% for the cigarettes, -0.3% for the rest of the products). Consumptions advanced more than revenue did (3.5% the total consumptions; 4.1% the cigarette packets, 1.6% the rest), but the lower average prices pushed downwards the accrued tax, which is still under prepandemic levels. Electricity Excise Tax rose by 1.2% until September, with a 3.2% consumption increment. The difference was due to the strong growth of those tax bases to which some reductions are applied, as well as to VAT rate lowering (in force since the end of June) and Electricity Tax rate lowering itself (in force since the second fortnight of September). All this led to a fall of the average tax rate. Excise Tax on Alcohol and Derivative Beverages scored a robust boost in the third quarter and accumulates a 27.4% pace year-to-date, although it was not strong enough to reach the level recorded before COVID crisis (-11.1%, compared to January-September in 2019) as the result of the hardship caused by pandemic in catering and accommodation sectors. Worse went the Beer Excise Tax, which contracted by 1.3% in the third quarter, leaving in 5.3% the year-to-date growth (-5.2%, when likening with the same period in 2019). Coal Tax, which has become residual (it is currently representing just a 0.1% on the whole amount of accrued excise taxes), plunged by 29% to date.

VAT (quarterly) EXCISE TAXES (quarterly)
--

**IV. METHODOLOGICAL NOTES AND SOURCES** 

Tax Revenue Monthly Report (TRMR) reflects the monthly level and evolution of **taxes yield managed by Spanish Tax Agency (A.E.A.T.)** on behalf of the Central Government and the Local Authorities (Regional Governments called "Autonomous Communities" and Town Councils or "Municipalities" inside the common fiscal territory).

#### 1. Cash method to measure revenue.

TRMR tax revenue is presented as **cash and net yield** (gross receipts minus refunds). The net measure explains the emergence of negative figures in some months.

For a more accurate reading, the rates of TRMR tables are subject to some limits. Thus, the sign of PIT annual return or net VAT rates is inverted in order to show their improvement or worsening more clearly. Besides, the rate is omitted if it is the result of an undefined or undetermined expression, or if the increase/fall is extravagant because one of the figures compared is too small.

#### 2. Budget Non-financial receipts scope.

**Budget field** of tax revenue managed by A.E.A.T. includes:

- Personal Income Tax, Corporation Tax and Non-Residents Income Tax, as well as other direct taxes belonging to Chapter I of the Budget. Insurance and pensions fund contributions from public officials are excluded;
- Value Added Tax, Excise Taxes and other indirect taxes contained in Chapter II of the Budget;
- Fees, Levies and other Chapter III receipts, comprising surcharges, interests and penalties.

Monthly and yearly non-financial revenue evolution (Chapters I to VII of State Revenue Budget) can be consulted on line in "General Intervention Board of State Administration" (I.G.A.E.) web.

Revenue managed by A.E.A.T. means more than eighty seven per cent of State total non-financial revenue, before subtracting Local Authorities share.

#### 3. Territorial funding system.

**Autonomous Communities and Municipalities share** on total tax revenue is about 40% in the last years and it is carried out through:

- Twelve equal payments on account of final year yield of assigned taxes.
- The final settlement of year T-2 paid in year T (July).

#### 4. Homogeneous Tax Revenue.

Homogeneous Tax Revenue is obtained amending the distorting factors that make difficult the comparison of current year revenue figures with those of the same period in the previous year. The effects usually amended are:

- a) Large public withholders' payment delays;
- b) Changes in taxes self-assessments procedures;
- c) Endorsement of new taxes affecting one single year;
- d) Taxes removal;
- e) Different refunds schedules in each of the compared years.

#### 5. Quarterly series of tax bases and accrued taxes yield.

Quarterly series of tax bases and accrued taxes yield are published together with TRMR in February, April, July and October. The target is to make easier the analysis of tax revenue evolution through the information about the bases on which taxes are worked out and through the measure of yield following the accrual period (accrued revenue, instead of cash revenue). Tax bases and accrued revenue allows a more accurate taxes effective rates estimate, since they are not distorted by the gap between the period in which the tax is calculated and the period in which the tax is actually paid.

Tax bases and accrued revenue are estimated from the data contained in self-assessments and informative forms submitted by tax payers.

Bases are estimated for the four main tax items: PIT (gross households' income), CT (consolidated corporation tax base), VAT (spending subject to VAT) and Excise taxes (monetary value of consumptions, instead of physical units, in order to obtain an aggregate total base).

To work out the accrued revenue, for each form are added together the following keys: receipts (including tax current account receipts), deferments, requests for compensation of fiscal debts, inability to pay, and finally public outlays that, at the same time, are fiscal receipts. Then, from this gross accrued receipts are subtracted the keys of refunds claims (including tax current account refunds) to obtain accrued net taxes figure. The exceptions are, on one hand, PIT and CT annual returns because they are collected one year later. So, the current accrued taxes series published together with TRMR include an estimate of annual returns worked out from bases and withholdings. On the other hand, there is another exception in "Period VAT", which is the accrued VAT reference variable: it is a measure that approaches output and input VAT and, therefore, it does not depend on how the tax is assessed and it is closer to spending subject to VAT. Yet, gross accrued VAT, refunds claims and net accrued VAT are calculated too following the most widely used criteria.

#### 6. Monthly Receipts. October.

#### Personal Income Tax:

Monthly PIT withholdings (large companies and public sector); third quarter withholdings (small and medium-sized companies); third quarter instalment (individual businesses and professionals).

#### Corporate Income Tax:

April-September instalment.

#### VAT:

September monthly self-assessments; third quarter self-assessments (small and medium-sized companies not subject to monthly VAT system).

#### Manufacturing Excise Taxes:

Alcohol, Beer and Intermediate Products: July payments for large companies.

Fuels and Tobacco: September payments.

Electricity: September payments (large companies); third quarter payments (small and medium-sized companies).

#### 7. Other regular information and monthly tax calendar.

Besides the usual content, TRMR includes a more detailed analysis of main receipts in some months:

- (1) Large corporations and small businesses receipts evolution (February, April, July and October).
- (2) Bases of the main taxes and accrued tax revenue (February, April, July and October).
- (3) CT instalments (April, October and December).
- (4) PIT annual return (May, June, July, August, September, October and November).
- (5) CT annual return (August).

More information can be found on the AEAT's website (clicking Statistics link):

- Recaudación tributaria (Tax revenue reports, with English translations)
- Estadísticas por impuesto (Tax statistics: PIT, Property Tax, CT, VAT, tax data on Labour and Pensions, motor vehicle tax, excise taxes)
- Ventas, Empleo y Salarios en las Grandes Empresas (Large Companies Sales, Employment, and Wages monthly reports)
- Comercio exterior (Foreign trade statistics).

## In 2021, the expected dates for TRMR publication on A.E.A.T. website are:

March, 29	December 2020 report
March, 31	January 2021 report
March, 31	February 2021 report
April, 30	March 2021 report
May, 31	April 2021 report
June, 30	May 2021 report
July, 30	June 2021 report
September, 10	July 2021 report
September, 30	August 2021 report
October, 29	September 2021 report
November, 29	October 2021 report
December, 23	November 2021 report
