## I. TAX REVENUE PERFORMANCE

### 1. Headlines.

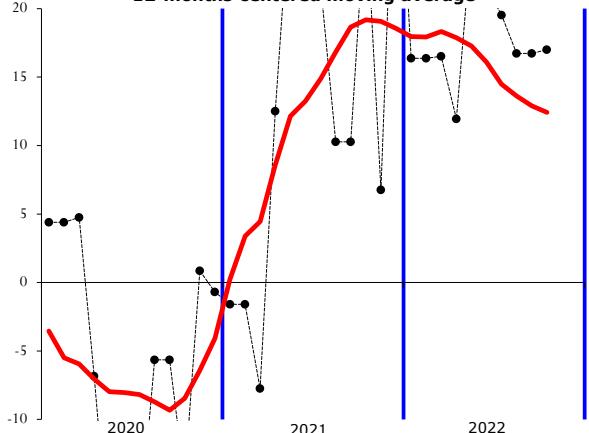

**Total Tax Revenue added €41.9 billion in October, 11.7% above the same month in 2021.** Gross collection soared by 17.9%, while the refunds paid virtually doubled the figure recorded in the same period of 2021 (92.5%). October's is the highest collection in the year as the usual monthly self-assessments converge with SMEs' third quarter self-assessments (related to payroll withholdings, payments on account and VAT) and Corporation Tax second instalment.

Four were the main features behind tax revenue performance in this month. The first of them was the strong increment in corporate profit, which steered to a 29% boost in the CT second instalment. The second one was the stability in the high paces scored by monthly self-assessments in both payroll withholdings (above 10%) and VAT (upper 30%). The third was the slowdown seen in SMEs revenue growth paces, once the comparison is made with periods not affected by restraints any longer. Anyhow, the increase rates were still robust (13.6% the payroll withholdings, 13.4% the payments on account and 9.2% the VAT). Finally, there was an extraordinary augment in the amount of refunds paid not linked to economic activity (€1,745 million out of €2,929 million total).

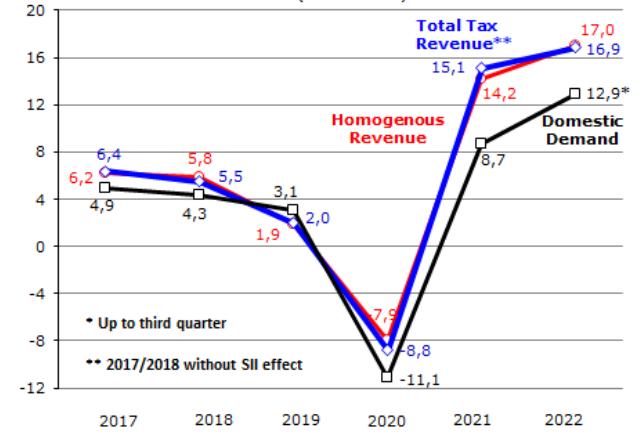

**Total Tax Revenue jumped by 16.9% up to October** (16.7% the gross receipts, 15.8% the refunds paid). **Homogeneous Tax Revenue ramped up 17%,** the same pace recorded until September.

The three key factors behind revenue evolution kept on being the same, albeit a fourth element entered the scene after the submission of payments on account from both corporations and personal businesses. The first constituent is VAT collection boost. It climbed by 17.9% until October, far above the increment of consumer prices in the same period and despite tax rate cut on households' electricity consumption. The second one is related to payroll withholdings that accumulated a 12.6% increase to date thanks to the rise in hiring, the upsurges in salaries and pensions as well as to the effective tax rate growth driven by them. The third explanatory factor lies on the enhancing outcomes in gross collection from annual returns in both Personal Income Tax and Corporation Tax, (above 31% jointly, coming mainly from 2021 annual returns). Lastly, as pointed out before, a fourth element has to be added: the instalments. In the case of Corporation Tax they scaled by 18.7% up to October, though it has to be reminded that the first instalment in 2021 was unusually high due to an extraordinary payment (without it, the growth would be higher than 25% this year). As of personal businesses, payments on account advanced by 21.7% across the year.

**R1. Homogeneous Tax Revenue: annual rate and 12-months centered moving average**

**R2. Tax Revenue and Domestic Demand (annual rates)**

The impact in 2022 from law and management changes affecting revenue widened noticeably in October. **They brought about a collection loss of €6,264 million to date**, 3.2% less, which is to say that without such changes revenue would have gained 20.1%. Table 0 shows the measures considered, broken down by items and figures.

Rate lowering in Electricity Excise Tax (RDL 17/2021)				-1 705		-1 705
Removal of the Tax on the Value of Electric Energy Production (RDL 17/2021)					-3 093	-3 093
<b>Other</b>	<b>- 7</b>	<b>-2 138</b>	<b>529</b>	<b>- 157</b>	<b>-1 773</b>	
Measures related to premises leases and housing refurbishment	- 7					- 7
Fee on inland waters use				- 130		- 130
Extraordinary receipts and refunds	-2 138	529		- 27	-1 636	

The most relevant change, comparing to the previous month, was located in the extraordinary refunds, afore mentioned. They all affect to Corporation Tax and all of them come from closed fiscal years (they have nothing to do with current collection). They are the sum of a reimbursement driven by a High Court ruling plus the refunds linked to the Deferred Tax Assets (€1,745 million overall).

As of the rest, the only significant novelty is the updating of the effects from the measures intended to hold off electricity prices. In this month, the Electricity Excise Tax impact is worth mentioning because it added only a part of the collection loss, since October 2021 was the first month in which the tax rate cut started to be noticeable (the measure was passed by mid-September). Provided that Table 0 only includes impacts affecting the comparison with the previous year, October's matches just with half a month and, from now on, the amount will be not incremented any more. For this same reason, only the additional cut from 10% to 5% will be included in VAT effect. These two measures plus the temporary withdrawal of the Tax on the Value of Electric Energy Production amounted to a €6,009 million loss to date.

**2. Main items evolution.**

- Personal Income Tax in homogeneous terms enlarged by 16.1% to date.**

Payroll withholdings, the main constituent of the tax, expanded by 11.4% in October, pace alike to the average recorded in the latest five months. The accumulated rate is higher, 12.6%, as a signal of the slowing trend seen in this revenue, which is sharper in the private sector. The evolution of this sector can be followed in Table A14, in which the outcomes are split into large corporations and SMEs. In the former, there is a stable tendency in the last months, with a 10.4% increase (10.7% year-to-date). The peaks were achieved between March and May (14.6% average in those months), overlapping the moments in which the hiring was highest. Afterwards, growth went slackening as labour market was less dynamic, but it was in turn enhanced by salaries increases (average salary growth has steadied at around 4% in the last months) and by effective tax rate rises (some upper than 3%). Regarding small businesses, payroll withholdings climbed up by 13.6% in the third quarter. In this case, the performance is neatly a cooling-off one (the overall growth is 16.5%) and can be explained mainly by the ongoing contrast with periods in which economy was making up for lost ground (it has to be reminded

that the comparison in the first half of the year was being made with quarters in which there still were restraints to economic activity). In the last quarter, nearly half the growth rate is linked to jobs data improvement and the rest comes from both average salary increments and tax rate rise.

Relating to Public Administrations' withholdings, they scaled by 10% in October. This pace is slightly below those recorded in the preceding months and the one scored to date (11.1%). It could be described as a slowing down performance since the beginning of the year (period in which the boost from pensions updating took place) yet, by and large, in the last months the trend has shifted to stability. This becomes clearer in pensions withholdings, which are jumping by around 17% each and every month, close to 10% due to tax rate rise (more than three percentage points just linked to the entering into the system of new retirees) and the rest because of pension bill increment (5.5% the average pension and above 1% the increase in the number of pensioners). On their side, withholdings linked to salaries showed a slightly above 5% growth, thanks chiefly to the advance in the average salary and the effective tax rate, given that the number of employees on payroll scarcely enlarges.

In October, SMEs' third quarter payments on account were submitted. Revenue from this item raised by 13.4% (21.8% to date). As in other rates, the lesser strength in the growth compared to the first leg of the year has to do with the comparison with periods in which there were no restraints to economic activity any longer.

(\*) Rates worked out for the quarterly or annual period in which there are available data.

(\*\*) After amending receipts displaced to May (RDL 14/2020) and deferments increase (RDLs 7, 11, 15 & 35/2020).

(1) Import VAT included.

(2) Growth rates shown in this table do not match exactly with stat tables included in the report due to the amendments previously explained.

Table A15 contains the main outcomes up to October from PIT 2021 annual return campaign. Regarding receipts, the situation, compared to the previous month, remains being virtually the same (the second instalment was cashed at the beginning of November) so that the growth rate keeps nearly unchanged (25.6%). As stated before, this is one of the factors behind revenue evolution in 2022. The chief causes underlying the strong growth in the positive net tax liability were the law changes deployed (tax rates rise on savings base and new thresholds for payments into the pension schemes) as well as the increment of incomes not completely subject either to withholdings or to payments on account (economic activities and capital gains). Relating to refunds, the amount requested by taxpayers fell down and, logically, so they did the figures paid back, though these last in lower proportion (in other words, the quotient refunds paid / total amount expected is currently higher, compared to the same period last year).

**TABLE A15**

<b>ANNUAL RETURN</b>	<b>322</b>	<b>-1.984</b>	<b>116,2%</b>			

Concerning the rest of items, capital withholdings boosted by 20.6% in October (9.1% year-to-date), pace that is alike to other months in which there were no extraordinary factors. Withholdings on leases showed a certain lessening (7% in October, 11.3% to date), in tune with other items affected by restraints to activity. Lastly, withholdings on capital gains scored a deep plunge in the month (-41.7%, similar to August's), after the soft advance occasionally seen in September (they receded by 1.4% up to October, contrasted with the record high level achieved in 2021).

- **Corporation Tax homogeneous revenue jumped by 25.6% up to October.**

The pace is higher than that estimated until September, yet the most relevant change, after October data came out, is the appraisal on the drivers that are behind this growth. Until the latest month, it was stated that the causes for the increment were mainly the following two: 2021 annual return receipts and the drop in the refunds paid to taxpayers (mostly belonging to 2020 fiscal year). However, there were two new facts in October: the first

one and most relevant was the submission of the second instalment, with a noticeably good outcome, and the other one was the payment of extraordinary refunds, already commented in previous sections of this report. The instalments have displaced 2021 annual return as the main explanatory factor for CT revenue evolution and the unusual refunds put an instant break on the fall that was being observed in the amount of refunds paid.

As far as 2022 second instalment is concerned, revenue surged by 29% (18.5% to date, because the first instalment was affected by the extraordinary receipts cashed with 2021 first instalment). Table A16 shows the outcomes displayed according to the size of the corporations. The overall gain in every set of companies was outstanding and reflects the improvement in profit evolution (in the case of small-medium corporations it needs to be recalled that most of them assessed the instalment on the basis of 2021 annual return, instead on the current profit). Nevertheless, the highest growth belongs to Consolidated Groups, which is besides calculated on a 2021 very high level (because of the assets sale carried out by a large corporation). As a matter of fact, in the 10 Groups with highest collection (excepting two, all of them belong to financial and energy sectors) the instalment was 2.5 times the amount paid in the same period last year, with a more than €2,400 million extra cash this year. Also as a result of this last fact, the minimum payment (worked out on profit instead on the tax base) was nearly half of the total collection in large corporations and Groups' second instalment.

\* Including the impact of the higher amount of deferments (RDL 35/2020).

\*\* Including the DTA refunds paid by offsetting with the first & second instalments liability (€161 and €398 million) in a large corporation.

Relating to annual return positive outcome, it rocketed by 42.3% until October (close to 46% the one coming from 2021 fiscal year). As pointed out in previous reports, this strong growth is linked to the comparison with 2020 annual return. Yet, even so, 2022 collection is higher than that from 2019. As a counterpart, annual return receipts' boost is running together with a noticeable enlargement of the amount of refunds claimed by taxpayers

(it is expected to reach €11,500 million, against €6,500 million in the last campaign). The impact from this augment in the refunds requested will start to be noticed in the coming months' collection, particularly in the first months next year.

- **Homogeneous VAT revenue rose by 19.2% year-to-date** (20.3% until September), 21% if the collection loss coming from the tax rate cut on electricity consumption were added.

Gross VAT from self-assessments, which is the revenue most linked to economy evolution, expanded by 17.9% in October (21.6% in the year). As it can be noticed consulting Table A14 data, the overall trend is a dampening one, though with different performances depending on the set of taxpayers considered. Regarding large corporations (self-assessments matching mainly with August accrual) the growth rate meant an upsurge, returning to the paces seen before September, month in which there was a transitory downturn: this revenue climbed by 30.4% in the month (25.1% to date). On their side, SMEs' receipts (third quarter self-assessments) raised by 9.2% in October, reaching a 15% accumulated. As seen when analysing the withholdings, this last pace meant a slowdown, albeit it has to be taken into account that growth rates in the first leg of the year were pushed up by the comparison with periods in 2021 either still affected by restraints or hard hit by Filomena storm.

Gross VAT, being more closely linked to the recent economic situation, allows to figure out the tax trend but in moments in which there is a strong increment in the amount of refunds paid to taxpayers, as it is currently happening, its use can drive to overrate the growth tendency. Indeed, so it is: refunds paid soared by 30% until October, but the monthly refunds, more narrowly related to the accrued VAT, rocketed by 38.3% (nearly the same than the refunds claimed until September).

- **Homogeneous Excise Taxes increased 2.1% up to October.** This set of taxes is burdened by the rate lowering in Electricity Excise Tax. As seen before, this fact drove to a €1,705 million revenue loss. Without it, homogeneous Excise Taxes collection would have gained 12.1%.

Excise Taxes total net revenue receded by 5.2% in October (2%, if Electricity Excise Tax were excluded). As in the latest months, the fall was due to the bad performance of Fuel Excise Tax, which declined by 3.1% (+6.7% to date). Prices remained being the chief explanatory factor, although economy evolution was also shaping the course of diesel-oil consumption (it fell down for the fourth month in a row while gasolines consumption only scored a slight drop in July's accrued tax). Together with this, there was also a descent in Tobacco Excise Tax (-3.6%) associated with the comparison to actually high levels in 2021, but it is not going to be reason enough to avoid an accumulated positive rate at the end of the year (6.2% until October). Alcohol taxes (July's accrual) went up by 12.4%, a moderate pace when compared with the overall growth (30.8%) that can be explained, as it has been done in other items, by the comparison with already typical periods not subject to restrictions.

**MAIN TAX BASES AND ACCRUED TAX REVENUE EVOLUTION**

Table A17 shows the recent evolution of tax bases, accrued taxes, aggregate average rate and total tax revenue. Quarterly data for these and other related series are available on AEAT web page from 1995 onwards (section of Stats, under the names of "Recaudación Tributaria" and "Informes Mensuales de Recaudación Tributaria").

(\*) Rates worked out using the data available up to date.

**Main Tax Bases** advanced by 13.4% in the third quarter of 2022, nearly two points and a half below the pace recorded in the first semester, although in this case the comparison is done with periods in which there still were some restraints to economic activity. Year-to-date growth is 14.9%, nearly two percentage points above 2021 rate estimate, albeit part of the boost was driven by prices hike.

Tax bases cooling-off in the third quarter can be seen in both bases linked to income and those related to spending. Conversely, CT base expansion exceeds the first quarter's, which was affected by the high pace scored in the same period a year before, partially conditioned by some extraordinary operations. In the case of spending subject to VAT, the slowdown in the third quarter is sharper when inflation effect is detracted. In turn, consumers rein in spending, together with a milder prices hike in the main benchmark products (gasolines and diesel oil for vehicles), had a relevant influence in the lessening of the value of consumptions subject to Excise Taxes.

In accumulated terms, the pace in tax bases linked to income (11%) as far as the growth rate in tax bases related to spending (20.8%) are above those recorded in 2021.

The moderation in gross households' income increase kept on going in the third quarter of the year, with a 6.8% increment compared to 8.9% in the second and 10.7% in the first quarter (8.8% to date). The slowdown was particularly marked in capital incomes (mainly those linked to mutual investment funds) and businesses' profit, while the hold back in the wage bill was milder thanks to the upturn in the gross average compensation, which partially counterbalanced the softer growth in the number of employees on payroll. On its side, pension bill remained scoring a pace alike the one seen in the previous quarter.

Earned income went up by 6.6% in the third quarter, half a point less than in the second, accumulating an 8.3% growth in 2022 to date. The softer pace in this income is down to private sector moderation, with a 9.6% advance in the wage bill against 12.5% in the first semester. A part of this weakening can be explained by the comparison with 2021 periods in which a 'usual' level of activity was already recovered (it needs to be reminded again that in the first half of that year the contrast was done with quarters still affected by limitations to activity). The slowdown was sharper in SMEs, whose incomes enlarged by 10%, nearly five points below the previous quarter, while large corporations' expanded by 9.2% in the third quarter (9.8% in the second one). In both cases, the softer pace was mainly driven by a less dynamic hiring by employers, despite staff levels growth kept on being high. Conversely, income from public sources jumped more intensely in the third quarter (2.9%, compared to 1.8% in the second quarter), thanks to the positive evolution of public wage bill backed on a higher augment in the average salary, a pension bill steady growth and a lesser drop in unemployment benefits.

The set of households' capital incomes expanded by 4.9% in the third quarter, pace that diverges noticeably from the 18.3% scored in the first half of the year. As noted before, capital gains (particularly those from investment funds) receded strikingly in the third quarter (-4.5%, -31.9% those subject to withholdings). In turn, movable capital incomes slowed down their growth in the quarter, in tune with dividends evolution, which showed softer paces after the strong upswing seen in the previous quarter. On their side, yields from bank accounts advanced by the second quarter in a row, although at a noticeably lower speed. Income from premises' leases (mostly subject to withholdings) slowed down too, albeit they kept a lively pace (10.9% in the quarter, 13% year-to-date).

Lastly, personal businesses' income climbed by 13.2% in the third quarter, against 23.3% in the first one. Given the features associated to these businesses, which are focused on accommodation, catering and personal / leisure services, the growth rate lessening also stems from the comparison with periods in which there were not so many restraints to activity as in the first leg of 2021.

Corporation Tax consolidated base jumped by 22.6% until September, a certainly brisk pace, even more if the contrast with a period in 2021 in which there were extraordinary operations (a bank merger and the assets sales carried out by a large corporation) is taken into account. In the second instalment, in which the period April-September is assessed, collection enlarged by 18.8%, 22.7% the instalment base. The advance was alike in consolidated Groups (18.8% and 23.2% each) and in large corporations non-belonging to Groups (18.7%, 22.2%). Yet, some differences can be found out in a more accurate review. Thus, for instance, in the Groups that calculated the instalment following the minimum payment rule the increment in the accounting profit (which is the instalment base) was particularly intense (42.4%) and it was mainly focused on energy and financial big Groups. On their side, those small / medium companies that assess the instalment on the current outcome saw their profit soar by 39%, though the instalment base reduced the expansion to 19.6%.

Final Spending subject to VAT increased by 11.8% in the third quarter, which meant a noticeable slowdown when compared to first semester pace (19.4%). It can be partially explained by the fact that spending was still affected by some limitations to activity in the first half of 2021. Across the year, spending subject to VAT boosted by 16.8% (7.1% subtracting prices hike effect). The lessening has been more evident in its main constituent, the households' spending, which passed from a 21.8% pace in the first semester to the 13.3% scored in the third quarter. Expenditure in new housing enhanced by 16.9% year-to-date, 13.9% in the third quarter. Public Administrations spending rose by 4.9% up to September, 1.9% in the third quarter.

The value of consumptions subject to Excise Taxes also decelerated in the third quarter (40.9%, 45.5% to date). Except in electricity, in which there was a slightly higher level of consumption after a two-quarters-period falling, consumptions evolution was not so favourable in the third quarter, with milder increments in alcohols (in the previous quarters the comparison was made with 2021 periods in which there still were restraints) and tobacco (even so, it keeps currently scoring higher increments than in the preceding years) while fuels consumptions receded (driven by the dip in the diesel-oil for vehicles consumption and by the lower increments in the rest of products). Regarding prices, even though the rises are still high the hike in gasolines and diesel-oil was softer than in the previous quarter, while the escalations in tobacco and electricity were alike those seen in the second quarter.

Accrued taxes surged 14.3% until September, 13.8% without annual returns, pace alike to the one recorded in the first half of the year. The growth was some below the pace seen in the tax bases because of the slight reduction in the effective tax rate across the year, as a combination of a higher tax rate on income and a lower tax rate on spending. Relating the former, the average effective tax rate grew up on households' income (pushed up by the higher average salaries and pensions as a result of the ongoing inflationary bout) as much as on Corporation Tax base (due to the minimum payment rule, according to which the instalment is worked out on the current profit instead on the tax base). As of the effective tax rate on spending, the drop was the result of the drastic rate cut in Electricity Excise Tax and of the still ongoing prices hike in fuels.

Chart A17.2a  
AGGREGATE TAX BASE AND ACCRUED TAX REVENUE  
(annual rates)

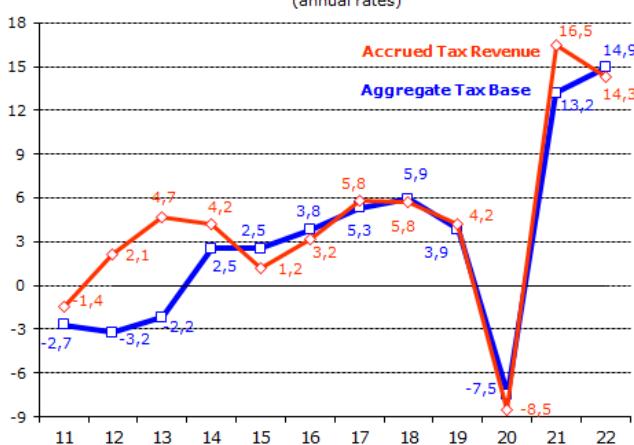

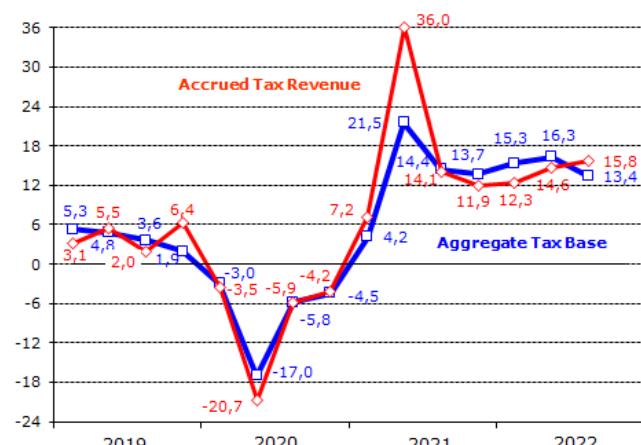

Chart A17.2b  
AGGREGATE TAX BASE AND ACCRUED TAX REVENUE  
(quarterly rates)

Accrued Personal Income Tax went up 11% in the first quarter, with an increasing weight of the effective tax rate: it rose by 3.9% (households' income heightened by 6.8%, as commented before). The accumulated increment until September was 12.7% estimate (13.3% without annual return) with a 3.6% average effective tax rate advance, due to the augment in the rates on salaries and pensions, as stated previously, which was derived in turn from the raises scored by average salaries and pensions.

In the case of pensions' withholdings, more than a half out of the 19.2% overall soar comes from the effective tax rate rise (nonetheless, it has to be reminded that in periods with much softer expansion in pensions the trending path was a growth rate outstripping 3% and it was due to the entering into the system of new retirees with higher pensions). These withholdings have kept a remarkably steadiness since February: they score paces around 17%, after the peak recorded in January linked to the compensatory pay for the purchasing power loss in 2021, steered by prices hike.

About salaries, withholdings achieved an 11.8% development until September, against 12.3% in the first semester. The share of tax rate increment was around two percentage points, with some differences connected with the set of payers. Private sector withholdings went up by 12.9% in the third quarter, more than two and a half points below the first semester, slowdown that is softer than that scored by the wage bill thanks to the higher rise of the effective tax rate. This counterbalancing effect is focused on SMEs' withholdings (14.8% in the last quarter, compared to 18.1% in the first half of the year). The wage bill deceleration was much wider, passing from 16.1% in the first semester to 10% in the third quarter, yet the 4.4% augment in the average effective tax rate (linked to a similar increase in the average salary) partially balanced the slowdown in withholdings figure. Conversely, relating to large corporations the income growth lessening was not so sharp, but the slowdown in the average tax rate was added and the final outcome was a clear weakening in overall withholdings performance. As to the public salaries, withholdings kept stable.

Movable capital withholdings put a break on their advance in an abrupt way, from 29.6% estimate in the first semester to 4.1% in the third quarter. This evolution was driven by the plunge in withholdings on mutual investment funds' gains and by the slowdown in withholdings on dividends and premises' leases, in tune with the evolution seen in the income subject to taxation. Lastly, payments on account showed also a milder advance in the third quarter, accumulating a 20.8% boost until September, rate that is some higher than the SMEs' profit estimate (in the first quarter of 2021, the measures deployed to support personal businesses assessing income under modules objective scheme were still in force).

Accrued Corporation Tax heightened by 25.4% up to September (18% without the annual return). The enhancing performance of instalments (18.3%, 31.4% without the unusual receipts cashed a year before) explains this increment, which backed on both tax bases increase and the higher contribution of the minimum payment, especially in the consolidated Groups. As in the first instalment, Groups scored the highest pace in the second one (47.8% without extraordinary revenue, 40.7% to date), but the advance was remarkable too in large corporations non-belonging to Groups (26.8%) as well as in SMEs (27.6%, 30.4% those which assess the instalment on the last annual return and 23% those other that assess the payment on the current profit).

Accrued VAT enlarged by 16.5% in the first three quarters of the year, in tune with the evolution of spending subject to tax. As in withholdings, a loss of speed is also observed in gross VAT along the third quarter (17.9%, compared to 22.5% in the first semester), being particularly intense in quarterly self-assessments (8.7% in the third quarter, 17.8% up to June) that is the set that comprises the sectors hardest hit by restraints to mobility in the first half of 2021. Gross VAT boosted by 22.6% in monthly self-assessments, which meant an around two percentage points loss, compared to the pace recorded in the first semester. On their side, the amount of refunds claimed by taxpayers kept on growing at a very high rate (45.5% in the third quarter, 37.9% to date) due to prices and exports evolution. All these factors pushed net accrued VAT to climb by 11.6% in the third quarter, 16.6% up to September.

Accrued Excise Taxes receded by 4.4% in the third quarter, leaving the accumulated pace in 0.9% until September. Amending the effect of the rate cut in Electricity Excise Tax, the growth would be 5.2% in the quarter and 11% year-to-date. The lesser growth can be explained, on the one hand, by the rein in consumptions driven by the prices hike and, on the other hand, by the comparison of the first two quarters of the year with periods in 2021 still affected by limitations to economic activity. Regarding Fuel Excise Tax, the most weighty item inside excise taxes group, the performance of the accrued tax reflects consumptions progress. Thus, consumption of diesel-oil for vehicles, more closely linked to the ongoing economy evolution, shrank by 3.7% in the last quarter, burdened by a 49.3% prices escalation (77.3% before taxation). In turn, gasolines consumptions went up by 2.2% (18.6% until June) while subsidized diesel-oil's, linked to farming, fishing and heating use, advanced by 1.3%, after two quarters declining. Electricity Excise Tax remained sinking around 80% due to the drastic tax rate cut, provided that consumption slightly expanded in the third quarter despite the strong rise in prices. Tobacco excise Tax grew up by 1.9% in the quarter (6.4% to date) thanks to the average tax rate increment driven by changes in consumptions distribution among the different products. Lastly, both Alcohol Excise Tax (12% in the third quarter, 25.9% to date) and Beer Excise Tax (3.3% and 8.5%) slowed down noticeably their growth paces, in tune with their consumptions' performances. The last two items are the best reflecting the deceleration derived from the comparison with those 2021 levels which were already nearer to 'usual' standards. If accrued collection is contrasted with that recorded in 2019, the growth is 9%, which is to say slightly below 3% per year, pace that is higher than the average between 2016 and 2019.

#### **IV. METHODOLOGICAL NOTES AND SOURCES**

Tax Revenue Monthly Report (TRMR) reflects the monthly level and evolution of **taxes yield managed by Spanish Tax Agency (A.E.A.T.)** on behalf of the Central Government and the Local Authorities (Regional Governments called “Autonomous Communities” and Town Councils or “Municipalities” inside the common fiscal territory).

### 1. Cash method to measure revenue.

TRMR tax revenue is presented as **cash and net yield** (gross receipts minus refunds). The net measure explains the emergence of negative figures in some months.

For a more accurate reading, the rates of TRMR tables are subject to some limits. Thus, the sign of PIT annual return or net VAT rates is inverted in order to show their improvement or worsening more clearly. Besides, the rate is omitted if it is the result of an undefined or undetermined expression, or if the increase/fall is extravagant because one of the figures compared is too small.

### 2. Budget Non-financial receipts scope.

**Budget field** of tax revenue managed by A.E.A.T. includes:

- Personal Income Tax, Corporation Tax and Non-Residents Income Tax, as well as other direct taxes belonging to Chapter I of the Budget. Insurance and pensions fund contributions from public officials are excluded;
- Value Added Tax, Excise Taxes and other indirect taxes contained in Chapter II of the Budget;
- Fees, Levies and other Chapter III receipts, comprising surcharges, interests and penalties.

Monthly and yearly non-financial revenue evolution (Chapters I to VII of State Revenue Budget) can be consulted on line in “General Intervention Board of State Administration” (I.G.A.E.) web.

Revenue managed by A.E.A.T. means more than eighty seven per cent of State total non-financial revenue, before subtracting Local Authorities share.

### 3. Territorial funding system.

**Autonomous Communities and Municipalities share** on total tax revenue is about 40% in the last years and it is carried out through:

- Twelve equal payments on account of final year yield of assigned taxes.
- The final settlement of year T-2 paid in year T (July).

#### **4. Homogeneous Tax Revenue.**

Homogeneous Tax Revenue is obtained amending the distorting factors that make difficult the comparison of current year revenue figures with those of the same period in the previous year. The effects usually amended are:

- a) Large public withholders' payment delays;
- b) Changes in taxes self-assessments procedures;
- c) Endorsement of new taxes affecting one single year;
- d) Taxes removal;
- e) Different refunds schedules in each of the compared years.

#### **5. Quarterly series of tax bases and accrued taxes yield.**

Quarterly series of tax bases and accrued taxes yield are published together with TRMR in February, April, July and October. The target is to make easier the analysis of tax revenue evolution through the information about the bases on which taxes are worked out and through the measure of yield following the accrual period (accrued revenue, instead of cash revenue). Tax bases and accrued revenue allows a more accurate taxes effective rates estimate, since they are not distorted by the gap between the period in which the tax is calculated and the period in which the tax is actually paid.

Tax bases and accrued revenue are estimated from the data contained in self-assessments and informative forms submitted by tax payers.

Bases are estimated for the four main tax items: PIT (gross households' income), CT (consolidated corporation tax base), VAT (spending subject to VAT) and Excise taxes (monetary value of consumptions, instead of physical units, in order to obtain an aggregate total base).

To work out the accrued revenue, for each form are added together the following keys: receipts (including tax current account receipts), deferments, requests for compensation of fiscal debts, inability to pay, and finally public outlays that, at the same time, are fiscal receipts. Then, from this gross accrued receipts are subtracted the keys of refunds claims (including tax current account refunds) to obtain accrued net taxes figure. The exceptions are, on one hand, PIT and CT annual returns because they are collected one year later. So, the current accrued taxes series published together with TRMR include an estimate of annual returns worked out from bases and withholdings. On the other hand, there is another exception in "Period VAT", which is the accrued VAT reference variable: it is a measure that approaches output and input VAT and, therefore, it does not depend on how the tax is assessed and it is closer to spending subject to VAT. Yet, gross accrued VAT, refunds claims and net accrued VAT are calculated too following the most widely used criteria.

## 6. Monthly Receipts. October.

### Personal Income Tax:

Monthly PIT withholdings (large companies and public sector); third quarter withholdings (small and medium-sized companies); third quarter instalment (individual businesses and professionals).

### Corporate Income Tax:

April-September instalment.

### VAT:

September monthly self-assessments; third quarter self-assessments (small and medium-sized companies not subject to monthly VAT system).

### Manufacturing Excise Taxes:

Alcohol, Beer and Intermediate Products: July payments for large companies.

Fuels and Tobacco: September payments.

Electricity: September payments (large companies); third quarter payments (small and medium-sized companies).

## 7. Other regular information and monthly tax calendar.

Besides the usual content, TRMR includes a more detailed analysis of main receipts in some months:

- (1) Large corporations and small businesses receipts evolution (February, April, July and October).
- (2) Bases of the main taxes and accrued tax revenue (February, April, July and October).
- (3) CT instalments (April, October and December).
- (4) PIT annual return (May, June, July, August, September, October and November).
- (5) CT annual return (August).

More information can be found on the AEAT's website (clicking *Statistics* link):

- *Recaudación tributaria* (Tax revenue reports, with English translations)
- *Estadísticas por impuesto* (Tax statistics: PIT, Property Tax, CT, VAT, tax data on Labour and Pensions, motor vehicle tax, excise taxes)
- *Ventas, Empleo y Salarios en las Grandes Empresas* (Large Companies Sales, Employment, and Wages monthly reports)
- *Comercio exterior* (Foreign trade statistics).

In 2022, the expected dates for TRMR publication on A.E.A.T. website are:
