1. Introduction

Pursuant to the objectives and strategy established in the “Project to modernise, improve and encourage the use of electronic means in the handling of Value Added Tax” for the new Immediate Supply of Information (SII) system, this document seeks to describe how information will be exchanged between taxpayers and the AEAT (Tax Agency).

In order to develop the project, its definition using standards that facilitate its development and that ensure high functionality has been deemed essential, which is why the use of web services that facilitate the supply of information almost in real-time has been proposed.

In summary, taxpayers must provide the Spanish Tax Agency with the following invoicing details:

- **Record:** Register of invoices issued and received, capital goods, cash transactions and a register for certain intra-EU transactions
- **Transaction type:** identified using CODES and SUBCODES. (Codes will be similar to those currently used in the 340 form: simplified invoice, corrected invoice, reverse charge, VAT on cash and other special schemes)
- **Invoice/simplified invoice details (Articles 6 and 7 of Royal Decree 1619/2012):** NIF (Taxpayer No.), identification, accrual and issue date, rates, bases and tax payable, etc.
- **Other details:** deductible tax payable, stating whether the transaction corresponds to current or capital goods, deduction period, corrections, etc.

2. Version control

2.1. Version 0.1

Creation of the document

2.2. Version 0.2

Change of input schema

2.3. Version 0.3

INPUT SCHEMA

INVOICES ISSUED

- Corrected and grouped invoices block. Rather than including the NIF/numSerie de factura/Fecha de expedición only the NumSerie/FechaExpedicion has been included as to avoid having to include the NIF pertaining to the issuer of the invoice again, which was already included in another tag.
- The total amount is now optional and not mandatory
- The collections tag has been deleted, as the supplies of collections are now undertaken in a different request. In other words, to register an invoice with the VAT payment scheme, first the invoice is registered with a request and subsequently, another request is sent with the supply of collections
- The option of including the DUA number instead of the number and series and admission date of the DUA instead of the issue date as part of the invoice's identification (IDFactura block), has been eliminated.
- A new value has been added to the list of possible values for the ClaveRegimenEspecialOTrascendencia tag. 15=Exportación. For Export transactions.
- An optional tag is included in the block that identifies the invoice (IDFactura) to register a new type of invoice that has been included: summary entries (NumSerieFacturaEmisorResumenFin). It will not form part of the primary code; however, if the invoice type is a summary entry, this field will be mandatory. This affects registration/amendment requests and removal requests.
- In the TipoFactura list, the following invoice type no longer appears F6- INVOICE THAT VOIDS A PREVIOUS INVOICE THAT IS DUE TO BE CORRECTED
- Within tipoDeRectificativa, type S2 invoices created according to the task to correct invoices that were previously voided with F6 have been removed. Ultimately, there are two correction types, S (replacement), and I (due to a difference), as in version 0.1
- In the TipoFactura list, the following invoice type has been included, F4 –

Summary entries

- VAT breakdown per transaction type:
 - o In the invoice breakdowns, the additional VAT amount and the additional VAT type are now optional as part of VAT.
 - o In the breakdown per transaction
 - In terms of service provision transactions, the additional VAT amount and the additional VAT type have been removed.
- Concerning transactions for the delivery of goods, the additional VAT amount and the additional VAT type are now optional as part of VAT

INVOICES RECEIVED

- An optional tag is included in the block that identifies the invoice (IDFactura) to register a new type of invoice that has been included: summary entries (NumSerieFacturaEmisorResumenFin). It will not form part of the primary code; however, if the invoice type is a summary entry, this field will be mandatory. This affects registrations, amendments and removals.
- The payments tag has been deleted, as the supplies of payments are now undertaken in a different request, in other words, to register an invoice with the VAT payment scheme, first the invoice is registered with a request for registration in the register of invoices received and subsequently, another request is sent with the key collection supply.
- The option of including the DUA number instead of the number and series and admission date of the DUA instead of the issue date as part of the invoice's identification (IDFactura block), has been eliminated.
- Corrected and grouped invoices block. Rather than including the NIF/numSerie de factura/Fecha de expedición only the NumSerie/FechaExpedicion has been included as to avoid having to include the NIF pertaining to the issuer of the invoice again, which was already included in another tag.
- The total amount is now optional and not mandatory
- The datosInmueble information block has been removed from this register.
- A block with Customs information has been included. Here, the DUA number and the DUA accounting date are included.
- In terms of the information included on the breakdown of VAT, a block has been added indicating whether the non-exempt part pertains to the taxpayer or not (NoExenta block).
- The cuotaDeducible tag is now mandatory.
- In the TipoFactura list, the following invoice type no longer appears F6- INVOICE THAT VOIDS A PREVIOUS INVOICE THAT IS DUE TO BE CORRECTED.
- In the TipoFactura list, the following invoice type has been included, F4 – Summary entries.
- The additional VAT amount and the additional VAT type are now optional in the breakdown of VAT.
- Within tipoDeRectificativa, type S2 invoices created according to the task to correct invoices that were previously voided with F6 have been removed. Ultimately, there are two correction types, S (replacement), and I (due to a difference), as in version 0.1

CAPITAL GOODS

- In the invoice identification (IDFactura) block, nombreRazon has been included in addition to the option that a NIF can include a foreign NIF (IDOtro block) so that in the request for identification, the NIF and NombreRazon are always included. This affects registration requests.

SPECIFIC INTRA-EU TRANSACTIONS

- The NombreRazon is included in the invoice identification (IDFactura) block so that in the request for identification, the NIF and NombreRazon are always included. This affects registration/amendment requests and removal requests

COLLECTIONS IN CASH

- The single request for registration/amendment/removal has been separated into two (although they include the same fields). This has been undertaken to follow the same philosophy in all registers, in other words, one request for registrations/amendments and another request for removals.

OUTPUT SCHEMA

- The response scheme has been changed, adding the corresponding information to the Cabecera and/or IDFactura blocks depending on the register in question and the request undertaken. In version 0.1, these blocks were common to all registers, with the exception of the amounts in cash register.
- Now, they are different to limit the output and stipulate the corresponding fields based on the input request for each register.
- Errors are no longer string-based, but numerical.

NEW OUTPUT ELEMENTS-SCHEMA

- Response to Supply of Collections
- Response to Supply of Payments

NEW PROCEDURE FOR MODIFYING A REGISTER

- The criteria has been changed and it is now possible to modify invoices from different years and/or periods in registrations; furthermore, it is not possible to modify invoices that are classed as removed (in version 0.2, this was not possible).

2.4. Version 0.4

OUTPUT SCHEMA

- The response scheme has been changed, adding the "DatosPresentacion" block containing the taxpayer's NIF and the Timestamp of the return.
- The response scheme has been changed, modifying the codes used for the invoice status and the overall sending status.

ADDITION OF THE CONSULTATION TASK

- Schema have been created to consult invoices/records submitted previously.

CHANGES TO NAMESPACE

- The "namespace" used in the schema has been changed.

2.5. Version 0.5

WSDL

- The SuministroInmediatoInfo.wsdl WSDL has been divided into the following WSDLs: SuministroPagosRecibidas.wsdl, SuministroOpIntracomunitarias.wsdl, SuministroCobrosEmitidas.wsdl, SuministroCobrosMetalico.wsdl, SuministroBienesInversion.wsdl, SuministroFactEmitidas.wsdl, SuministroFactRecibidas.wsdl. Each one has a different endpoint.

SCHEMA

- The Invoices Issued scheme has been changed, modifying the fields in the <NoSujeta> **block**.
- The Invoices Received scheme has been changed adding the <PorcentCompensacionREAGYP> and <ImporteCompensacionREAGYP> fields under the <DetalleIVA> block

SPECIAL SCHEME CODE OR IMPLICATION IN INVOICES ISSUED

- Code 15 for the invoices issued register has been changed

PROPERTIES CODE

- The description has been added to the list of properties codes

RECTIFICATION INVOICES

- A new category has been established for corrected invoices, adding types R4 and R5

EXAMPLES

- New example XMLs have been added

VALIDATIONS

- As part of failed NIF validations, the response will stipulate whether the error is attributable to the NIF not having been identified or the NIF format being incorrect (See codes in the validation document)

2.6. Version 0.6

WSDL

- The WSDL SuministroCobrosMetalico.wsdl has been deleted and SuministroOpTrascendTribu.wsdl has been created in its place, which describes tax-related transactions charged in cash on an annual basis and insurance transactions.

SCHEMA

- A new schema has been created for Insurance transactions.
- The Invoices Issued scheme has been changed, with the optional field <VariosDestinatarios> having been added.
- The Invoices Received scheme has been changed and now includes the <InversionSujetoPasivo> block. Therefore, in the <InversionSujetoPasivo> block, it will only be noted if there is an ISP with its corresponding breakdown (reverse charge) and, in the <DesgloseIVA> block, the other aspects of the transaction will be noted (regardless of their classification) with the corresponding breakdown.
- The <ReferenciaCatastral> field in the invoices issued scheme has been changed to optional
- The Invoices Issued scheme has been changed, with the optional field <Cupon> having been added.

SPECIAL SCHEME CODE OR IMPLICATION IN INVOICES ISSUED

- The table of the special scheme codes or effect on invoices received or issued has been changed

LIST OF INVOICE TYPES

- The list of invoice types is divided into two lists, one for invoices received and the other for invoices issued: L2_EMI and L2_REC1
- A new type of invoice has been added for the register of received invoices: F5-Importaciones (DUA)
- A new type of invoice has been added for the register of received invoices: F6-Otros justificantes contables

XML EXAMPLES

- An XML example has been included for received invoices
- An XML example has been included for capital goods
- An XML example has been included for certain intra-EU transactions
- An XML example has been included for collections in cash
- An XML example has been included for insurance transactions

2.7. Version 0.7

SCHEMA

- The size of the <NombreRazon> field has been increased to 120 characters. In the previous version, it was 40 characters.
- The <CSV> field has been added to the consultation response schemes. It includes the CSV associated with each register saved in SII.
- The optional <CSV> field has been added to the supply response schemes. This field is only sent if during the registration operation the register sent is rejected for being a duplicate or, during the removal operation, it is rejected because it has already been removed. The field contains the CSV associated with the register that already exists in SII.
- The <EstadoCuadre> field has been added to the issued and received invoices consultation response schemes. It gives information on the verification status associated with the invoice.
- The consultation schemes have been modified, with optional search fields being added to enable filtering of the consultations by these fields. The fiscal year and period are still mandatory fields for the filter.
- The optional <DatosDescuadreContraparte> block has been added to the issued and received invoices register consultation response schemes. It contains the counter party data which will be displayed only if there is a discrepancy, in other words, in the event that the <EstadoCuadre> field of the invoice is partially verified.
- The <Aduanas> block has been deleted from the received invoices register scheme.
- In the <DetalleIVA> block of the issued invoices register, the <TipolPositivo> and <CuotaRepercutida> fields have been made optional.
- A new scheme has been created for providing travel agencies (Provisions of transport services to travellers and air freight-baggage services that are documented in invoices issued in accordance with additional provision four of Royal Decree 1619/2012, of 30 November). It has been created within the "supply of other tax-related transactions charged on an annual basis" section (SuministroOpTrascendTribu.wsdI).
- The <PeriodoLiquidación> block has been added to the response schemes for

the supply of collections in cash and insurance transactions.

- Capital goods have been adapted to allow the same invoice to be supplied by varying the <IdentificacionBien> field. This implies including the <IdentificacionBien> field in the removal and consultation schemes. Furthermore, the supply response schemes will include the asset identification and fiscal year fields.
- The optional fields <ClaveRegimenEspecialOTrascendenciaAdicional1> and <ClaveRegimenEspecialOTrascendenciaAdicional2> have been added to the issued and received invoices schemes. Thus, the “special scheme codes or effect” can be combined. It is thus possible to provide information on more than one code (up to three), but the code provided in the <ClaveRegimenEspecialOTrascendencia> field will be the main one, as it is this first code that marks the validations to be considered.
- The optional <NumRegistroAcuerdoFacturacion> field has been added to the issued and received invoices schemes. This field will be the register number obtained when sending the corresponding invoice agreement.

IDENTIFICATION

- To send an issued invoice with a recipient NIF identification that has not been registered with the AEAT, a new type of identification 07-Not registered has been included in the counter party of the issued invoices register.
- For sending collections in cash and insurance transactions with recipient NIF identifications that have not been registered with the AEAT, a new type of identification 07-Not registered has been included in the counter party

XML EXAMPLES

- An XML example of a simplified invoice for issued invoices has been included
- An XML example for importing received invoices
- An XML example has been included for when the counter party is not registered in the issued invoices register
- An XML example has been included for consulting issued invoices by filtering by

fiscal year, period and counter party.

- An XML example has been included for consulting received invoices by filtering by fiscal year, period, NIF of the invoice issuer and submission date.
- An XML example has been included for travel agencies (Provisions of transport services to travellers and air freight-baggage services that are documented in invoices issued in accordance with additional provision four of Royal Decree 1619/2012, of 30 November)

COUNTRIES

The table of countries has been updated in accordance with the country codes established in Order EHA/3496/2011, of 15 December, in its Appendix II (Official State Gazette (BOE) of 26/12/2011)

VERIFICATION INFORMATION ON INVOICES ISSUED/RECEIVED IN THE CONSULTATION OF INVOICES SUBMITTED

- The table detailing the verification statuses of invoices has been included for issued and received invoices
- Invoices with a "Partially verified" status will include the <DatosDescuadreContraparte> block in the consultation response XML, with the information declared by the counter party (client/supplier) that does not match that included in the register declared by the taxpayer

SPECIAL SCHEME CODE OR IMPLICATION IN INVOICES ISSUED

- The names of the register register codes have been modified, in some cases, for the purposes of clarifying their content.
- The 16-First half of 2017 code has been added

SPECIAL SCHEME CODE OR EFFECT ON INVOICES RECEIVED

- Two codes (10 and 11) have been deleted from the Register of invoices received. Both codes have been deleted but the others shall remain with the same numbering.
- The names of the register register codes have been modified, in some cases, for the purposes of clarifying their content
- The 14-First half of 2017 code has been added

COMPATIBLE TRANSACTIONS WITH AND WITHOUT REVERSE CHARGE IN THE ISSUED INVOICES REGISTER

- A third option (S3) has been created for the <TipoNoExenta> field that implies that the invoice has both a part without a reverse charge and a part with a reverse charge

CONTENT WITH RETROACTIVE EFFECT TO BE SENT THE FIRST HALF OF 2017

- Details are given of how to send invoices from the first half of the year. Examples XMLs for sending are included

2.8. Version 1.0

- Production Version 1 July 2017
- WSDLs have been modified to incorporate production EndPoints
- The xsd SuministroInformacion has been modified with the current version of the scheme, which is 1.0.
- XML examples have been updated to version 1.0. Only the **<sii:IDVersionSii>1.0</sii:IDVersionSii> tag has been modified**

2.9. Version 1.1

- The xsd SuministroInformacion.xsd has been modified with the current version of the scheme, which is 1.1.
- The following tags have been renamed:
 - o <PeriodoImpositivo> has been renamed <PeriodoLiquidacion>.
 - o <EmitidaPorTerceros> has been renamed <EmitidaPorTercerosODestinatario>
 - o <ImporteTransmisionSujetoAIVA> has been renamed <ImporteTransmisionInmueblesSujetoAIVA>
- The name of the code "first half 2017" in both the register of invoices issued and

received has been changed to "first half of 2017 and other invoices prior to inclusion in the SII"

- A new type of "LC" invoice called "Customs - Complementary Settlement" has been created in the register of invoices received.
- A tag has been created in the register of invoices issued <FacturaSinIdentifDestinatarioArticulo6.1.d> to identify complete invoices in which it is not mandatory to identify the addressee
- A tag has been created in the register of invoices issued and received <FacturaSimplificadaArticulos7.2_7.3> to identify simplified invoices that identify the recipient in accordance with Sections 2 and 3 of Article 7 of RD 1619/2012
- A tag has been created in the register of invoices issued <FacturacionDispAdicionalTerceraYsextoyDelMercadoOrganizadoDelGas> to identify whether the invoice has been issued by a third party in accordance with a regulatory requirement (third and sixth additional provision of the Regulation regulating invoicing obligations or organised gas market regulations).
- A new code has been included in the field "means of payment/collection". It will now be code 05 "collection or payment by direct debit".
- In the register of issues, in the <TipoDesglose> block, the <DetalleExenta> tag has been added to allow the breakdown of the exempt amount according to the different causes of exemption that become compatible.
- An additional free content tag called <RefExterna> has been added to the registers of issued, received, investment goods and certain intra-EU transactions, so that internal company information associated with the invoice record can be added.
- "SuministroInmueblesAdicionales.wsd!" has been created, which describes the sending of additional properties when an invoice has more than 15 properties, which are allowed in the XML sending of issued invoices. A certain XML will be sent with the rest of the properties.
- The tag <NumRegistroAcuerdoFacturacion> has been created in the registers of investment goods and certain intra-EU transactions
- The <RegistroDuplicado> block has been created in the response of the information supply of all registers. This block will only be included in the XML response for duplicate rejected records. In this way it is possible to know the actual status of the registration within the SII
- The block <EntidadSucedida> has been created in the registers of issued, received, investment goods, certain intra-EU transactions and supply of other transactions with tax transcendence to identify the invoicing records made by an entity in its condition of successor of another entity due to corporate restructuring operations.
- The tag <RegPrevioGGEEoREDEMEoCompetencia> has been created in the registers of issued, received and certain intra-EU transactions for those invoicing records with difficulties to be sent on time because there is no record of the change of status to GGEE, of the inclusion in REDEME or of a change in the inspection competence
- The tag <Macrodato> has been created in the registers of issued and received invoices to identify those invoices with invoice amount above a threshold of 100,000,000 euros
- The new communication types A5 and A6 have been created for the register of

invoices issued. A5 to record VAT refunds for travellers and A6 if these records are to be modified.

- The outgoing and incoming consultation schemas have been modified, with the optional search block <FechaCuadre> being added to be able to filter consultations by this field.
- Quarterly periods have been included
- Schemas have been created for the new consultation that allows querying the invoices reported by clients and suppliers.

2.10. Version 1.1(bis)

- The value of the tag **<IDVersionSii>** has **not** been modified. The tag value is **<IDVersionSii>1.1</IDVersionSii>**.
- In the register of invoices received within the blocks **<InversionSujetoPasivo>** and **<DesgloseIVA>** the **optional** tag **<BienInversion>** has been added, which specifies investment good.
- **Optional tags have been added to the register of invoiced received:** **<ADeducirEnPeriodoPosterior>** **<EjercicioDeduccion>** and **<PeriodoDeduccion>** which specify that the invoice is deducted in a later period.
- Invoices received and issued can be consulted for the entire fiscal year. In this case, the value of the period tag in the consultation should be **<Periodo>0A</Periodo>**. A maximum of 10,000 records will be returned. If there is more data pending in the response, the service will have to be invoked in paginated form.
- "SuministroVentaBienesConsigna.wsdl" has been created, which describes the new Register of Certain Intra-EU Transactions. Sale of goods on consignment.
- A new value has been added to the list of Special system code or transcendence in invoices issued. 17= Transaction covered by one of the schemes provided for in Chapter XI of Title IX (OSS and IOSS)
- "ConsultaLLAA.wsdl" has been created to consult the Aggregate Registers (ARs).
- A new value has been added to the list of invoice type in invoices issued. The AJ (Profit Margin Adjustment) invoice rate to be effective 1 January 2023
- In the register of issues, the optional tag **<HidrocarburosExtraidosDeposito>** has been added.

3. General functional scheme

For Companies included in the group comprising Large companies, VAT groups and those entered under the monthly return scheme, invoicing information should be issued to the Spanish Tax Agency.

Information must be sent online, specifically via Web Services based on the XML message interface. The structure of said messages shall consist of a standard header with information on the owner of each register, before including a block with invoice details. All the aforementioned messages are returned synchronously.

Mass registrations, removals or amendments may be performed on each type of register.

Collections/payments may be added to invoices received and issued. The inclusion of collections/payments must be stated in an XML message sent separately to XML message for the supply of invoices issued and received. Collections/payments shall be

cancelled sending the collections/payments to be cancelled using a minus amount; in other words, there is no certain task for removing collections/payments.

Having sent the XML message, the AEAT will automatically perform a validation task, both in terms of the XML format and business rules.

If the message does not pass any of the XML format validations, a SoapFault-type message will be returned, indicating the certain error.

If the message passes the XML validations, business validations will be performed, with a response returned containing the result of the validation and whether it has been accepted or not by the AEAT.

Essentially, the XML sent by companies is an invoice container, with the corresponding details, identified using a single code. Amendments and removals may be made concerning details of the invoices issued. The maximum number of invoices per transmission is 10,000.

The unit of information, invoice, may be accepted, rejected or accepted with errors as a result of the validations performed at the time of submission.

If the invoices contain errors, only invoices for which no reason for rejection exists will be accepted. In the event of rejection, companies must make the necessary corrections and submit the return again, including the invoices that were initially rejected.

The XML response message sent by the AEAT will contain the list of invoices accepted, accepted with errors, and rejected along with the reason that they were not accepted or rejected with errors. The response will also contain the Secure Verification Code (SVC) that will be used to record the submission, unless all invoices sent are rejected.

In turn, the response will also include the overall result of the submission, which may be accepted (if there are no errors in any invoice), partially accepted (when there are invoices accepted, rejected or accepted with errors) and rejected (when all invoices have been rejected).

Registration and amendment tasks that may be performed on the invoice are included in the <TipoComunicacion> field of the transmission message. All invoices sent in an XML message must feature the same <TipoComunicacion>, in other words, in one single transmission, invoices may be included that responds to the same <TipoComunicacion> “registrations” or “amendments”. Both registrations and amendments may not be included at the same time.

The invoice removal task is undertaken in a removal-specific XML message, which shall contain a standard header and the list of all invoices to be removed in a single

transmission. Each invoice shall be identified via the contents of the <IDFactura> tag. Furthermore, the tax year and removal period for each invoice must be stated.

The <IDFactura> tag contains the fields for the unique identification of the invoice. When, as part of a subsequent return, an amendment needs to be made to said unit of information, the invoices to be amended must be sent, in addition to the <TipoComunicacion> tag value with the amendment value.

Mass requests undertaken using the web services defined for each of the register types will return a response in which the overall result of the transmission and the specific result of each invoice/record will be indicated.

The overall result of the transmission will be one of the following:

- Fully accepted
- Partially accepted
- Fully rejected

The partial result for each invoice/record included in the request will be one of the following:

- Accepted
- Accepted with errors
- Rejected

Description of the overall statuses of a request

Fully accepted

A submission that has been fully accepted means that all invoices or records included therein have passed both syntactic verifications and business verifications and therefore have been registered satisfactorily by the Agency.

Fully rejected

A submission that has been fully rejected may be attributable to one of two factors:

1. Either the structure defined in the submission does not comply with the defined scheme (it fails structural validations), or there are syntactic errors in the header and therefore the entire request has been rejected.
The response will return a SoapFault-type message, in which the specific error will be indicated.
2. None of the invoices/records included in the request pass corresponding syntactical or business validations (concerning the header) and therefore, they have all been rejected.

Partially accepted

A submission that has been partially accepted means that not all invoices or records included have been correctly accepted and therefore, those that have not been accepted have not passed one of the established validation types.

A correction must be submitted in order to accept the incorrect invoices or records.

This response type will be created when in a single transmission, there are invoices/records accepted or accepted with errors and rejected invoices/records

Types of Errors defined for invoices/records:

- **“Inadmissible” errors:** errors that cannot be accepted by the Agency under any circumstances in the submission of invoices or records for each register. These errors are caused as structural and syntactic validations concerning the transmission have not been passed or there are errors in the identification of the owner of the register. Records that cannot be processed as they feature contradictions or information that cannot be handled will be rejected. For example, accepting an error in the identification of the owner would mean that nobody can correct the error at a later stage, as nobody would be considered the owner of the record; therefore, it would have to be rejected.
- **“Admissible” errors:** errors that can be accepted by the Agency in the submission of invoices or records for each register. These errors may concern errors in invoices or records provoked by business validations run on invoices or records.
The response returned for this type of error will be shown as an admissible error in the response to inform the person submitting the invoice or record that an error has occurred, but that this has not prevented it from being recorded by the Agency.

Handling of admissible errors:

Acceptable errors will be recorded by the Agency's systems, but must be corrected in order to complete the processing and validation thereof.

To correct these errors, a correct *Amendment* request must be filed for the invoices or records accepted with errors.

4. Standards and requirements

4.1. Introduction.

The content of the message is in XML format. An XML document must fulfil the rules set out in the different schema, which stipulate rules in terms of formats, required fields, etc.; however, in any case, the consistency of data must be guaranteed at the source by those involved in the preparation and submission of data.

Each scheme is organised in Data Groups that contain Data Elements. They have been grouped in such a way that they consist of logical blocks, ensuring consistency with the scope of each scheme.

Submissions may be performed by the party liable for tax payments, a representative thereof for the purposes of this process or an authorised agent, who must have a recognised electronic certificate. Applications that send information to web services must be authenticated with the client's electronic certificate. Therefore, in order to use the services, the person in question must have a recognised electronic certificate accepted by the Tax Agency installed on the computer from which the information is sent. Said certificate may have been awarded to a Natural Person or Legal Entity. All NIFs must be validated against the Centralised Database retained by the AEAT.

4.2. Standards used.

The use of web services constitutes the basis of good practice for deploying services that make machine to machine interaction possible, that is, the integrated automation of a process in which various information systems are involved (those of citizen/company and the Tax Agency).

The aim is to use de facto standards for developing web services.

The structure of the messages is based on the creation of XML schema using the W3C recommendation dated 28 October 2004 at <http://www.w3.org/TR/xmlschema-0> and referenced by the namespace <http://www.w3.org/2001/XMLSchema>

Regarding SOAP, SOAP V1.1 available as W3C NOTE of 08-May-2000 at: <http://www.w3.org/TR/2000/NOTE-SOAP-20000508/> and referenced by the namespace <http://schemas.xmlsoap.org/soap/envelope/> will be used.

In SOAP-1.1, there are two styles to implement services, "rpc" mode and "document" mode. Based on current recommendations, "document" mode will always be used (style = "document") with no encryption (use = "literal"). This means that the input and output messages will be described entirely by their respective XML schema.

In the description of the services we will use WSDL 1.1 available as W3C NOTE of 14-March-2001 at: <http://www.w3.org/TR/2001/NOTE-wsdl-20010315> and referenced by the namespace <http://schemas.xmlsoap.org/wsdl/>

4.3. Transmission method.

Environment: Internet.

Protocol: HTTPS.

Messages: Web Service with SOAP 1.1 Document mode.

Certificate: Applications that send information to web services must be authenticated with the client's electronic certificate. In order to use the services, the person in question must have a recognised electronic certificate accepted by the Tax Agency installed on the computer from which the information is sent.

Signature: The XML exchanged will not be signed.

5. Design considerations

5.1. *Reporting incidents when processing requests concerning registers*

Any incidents processing the XML will be reported as described in the SOAP V1.1 protocol, in other words, using the Fault element.

In summary, responses to a request may be any of the following:

Result on the client's side	Action
An XML expected response is shown (May be accepting or rejecting the request)	OK. Message processed
A response with a Fault element and the "soapenv:Server" faultcode received	Resend message
A response with a Fault element and the "soapenv:Client" faultcode received	The message is not correctly formatted or contains incorrect information. Check the content of the "faultstring" element to resolve the problem before resending the message.
No progress with the transmission or the expected XML document has not been generated	Resend message

6. Design

6.1. *Structure of the messages.*

Request message

This will contain a SOAP layer and the BODY will feature the submission details. The message will be unsigned.

Response message

This will contain a SOAP layer and the BODY will feature the response details. The response will be unsigned.

6.2. *Message types.*

“Request” XML sent by companies comprising:

- Header
- List of invoices

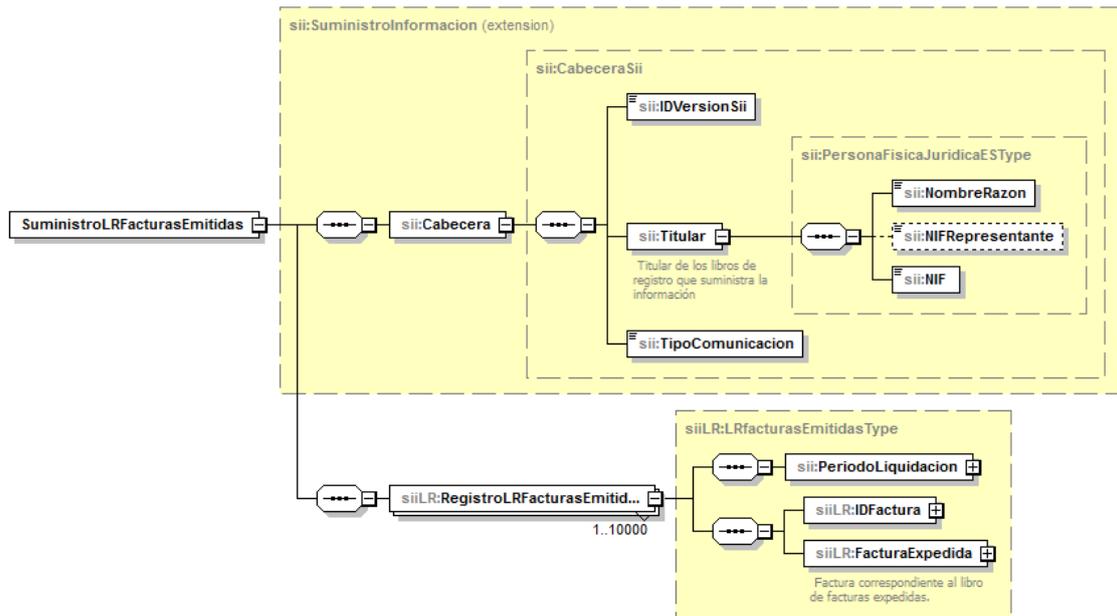

The tasks defined for each register are as follows:

6.2.1. Invoices issued register:

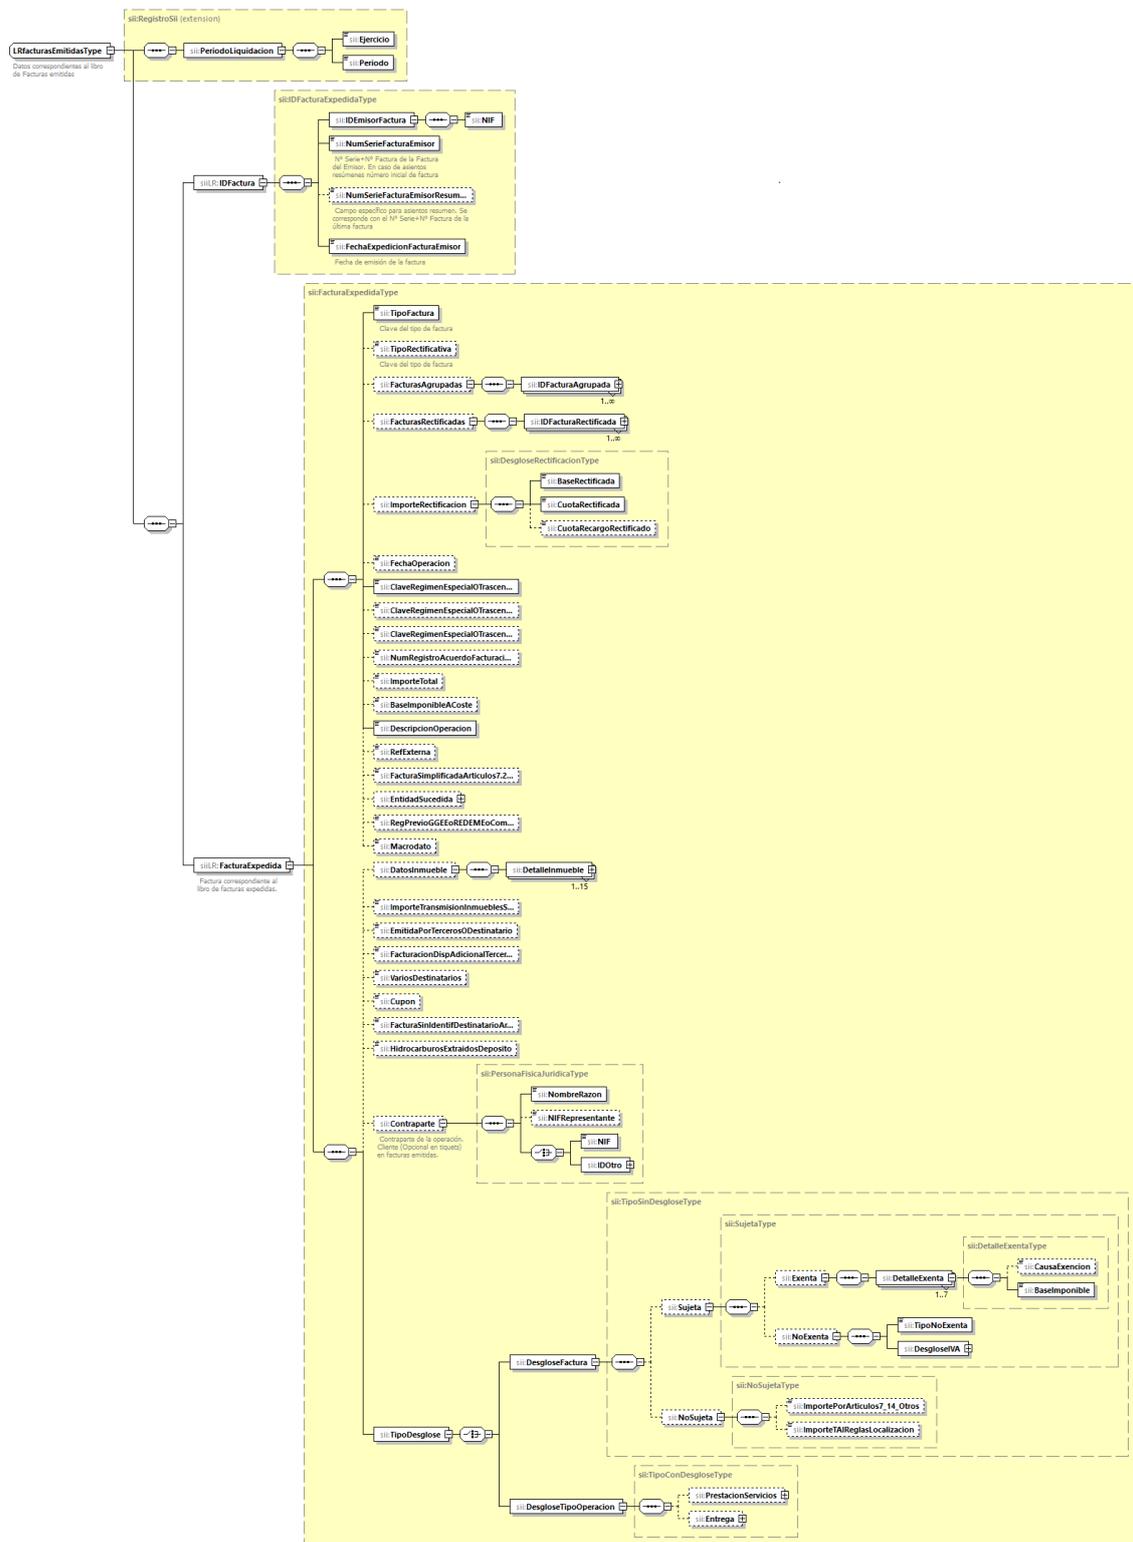

6.2.1.1. *Registration/Amendment of invoices*

The generic structure of the request will be as follows:

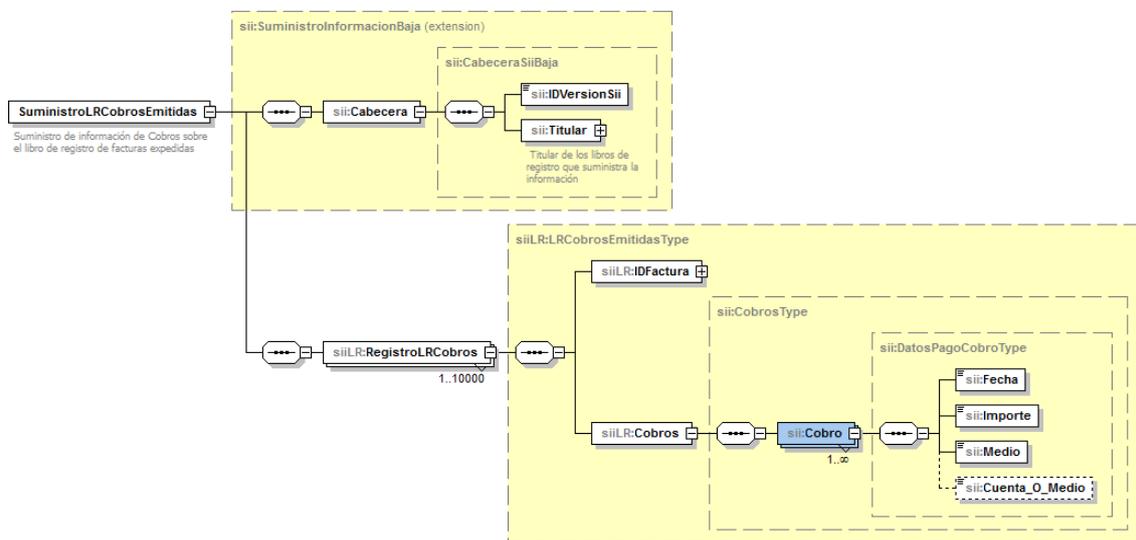

The structure of defined types for each of the records/invoices included in each request is as follows:

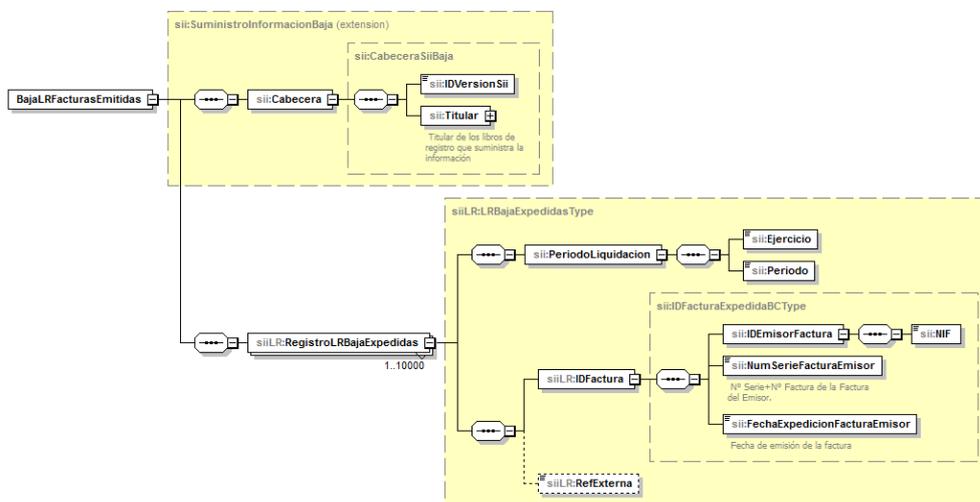

6.2.1.2. Supply of collections against invoices recorded in the Register of invoices issued (including registrations and cancellations via negative entry) Special cash-based system

Amendments and removals cannot be made to the supply of collections. To cancel a collection, the collection information must be sent with a minus value

6.2.1.3. Removal of invoices

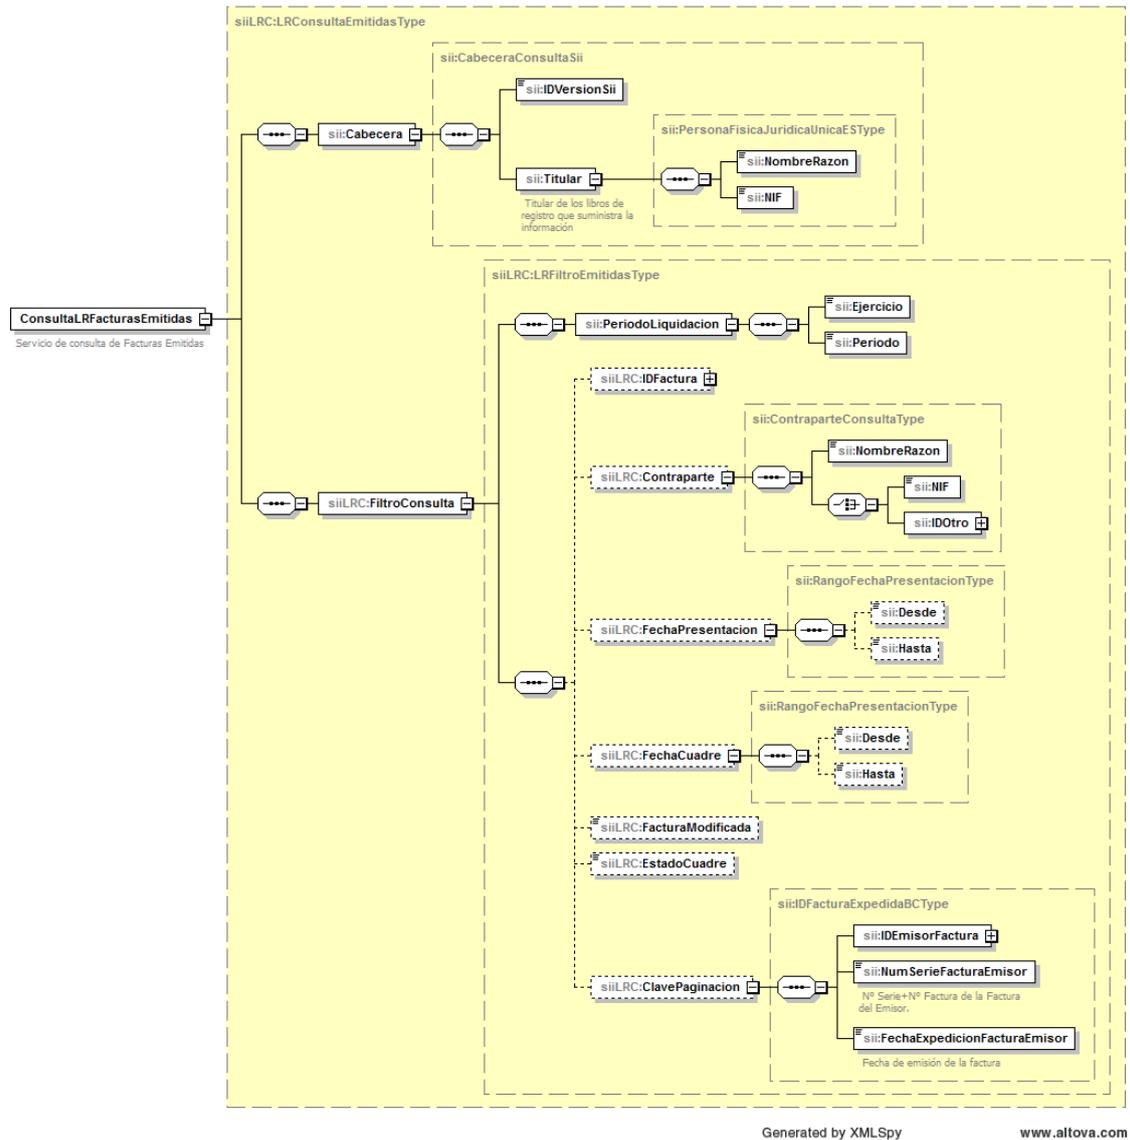

The structure of the request will be as follows:

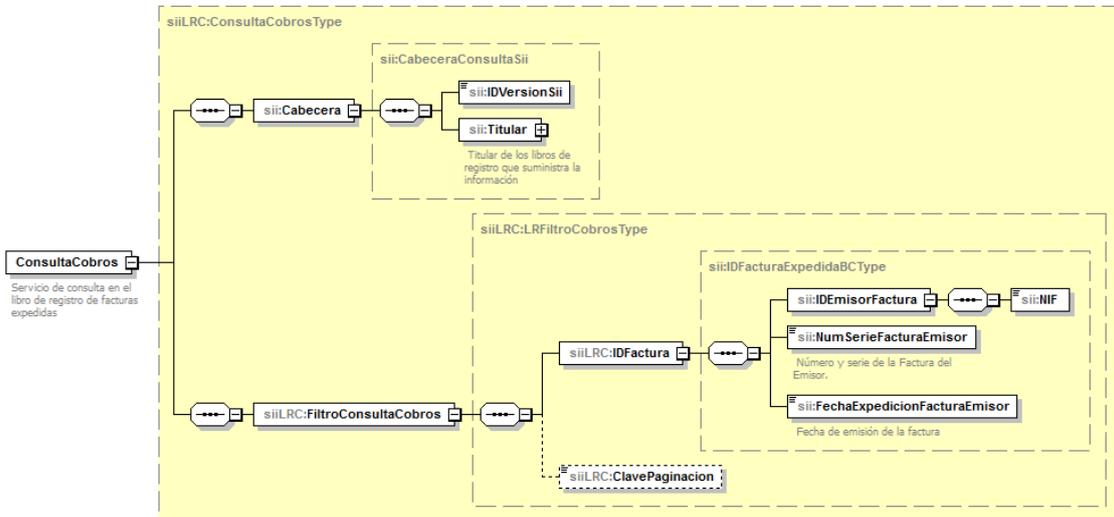

6.2.1.4. Consultation of invoices submitted previously

The structure of the request will be as follows:

6.2.1.5. Consultation of collections submitted previously against invoices recorded in the Invoices issued register.

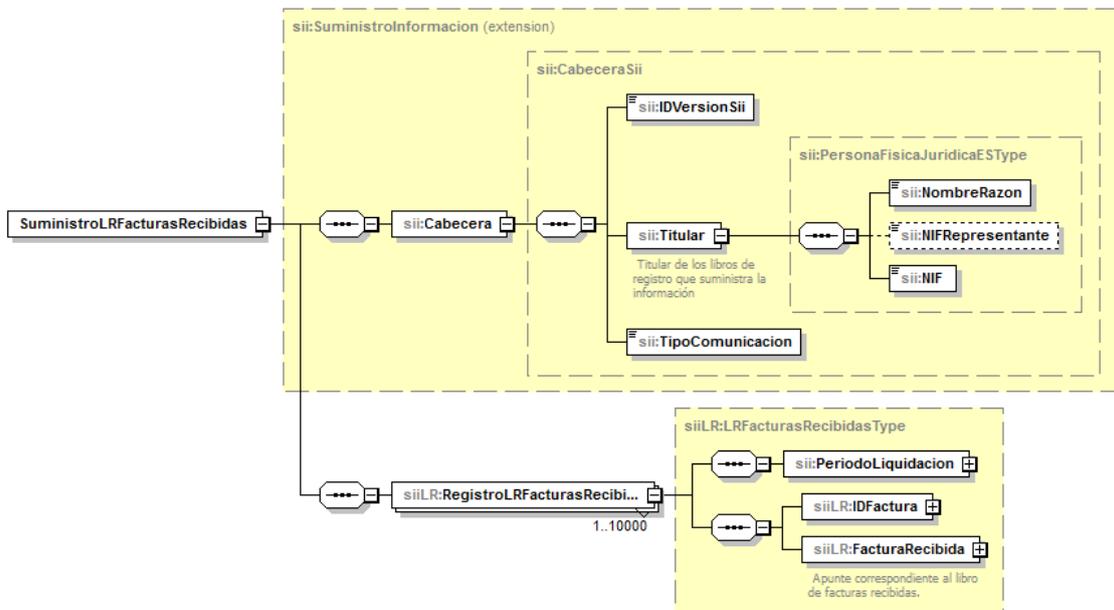

The structure of the request will be as follows:

6.2.2. Invoices received register

6.2.2.1. Registration/Amendment of invoices

The generic structure of the request will be as follows:

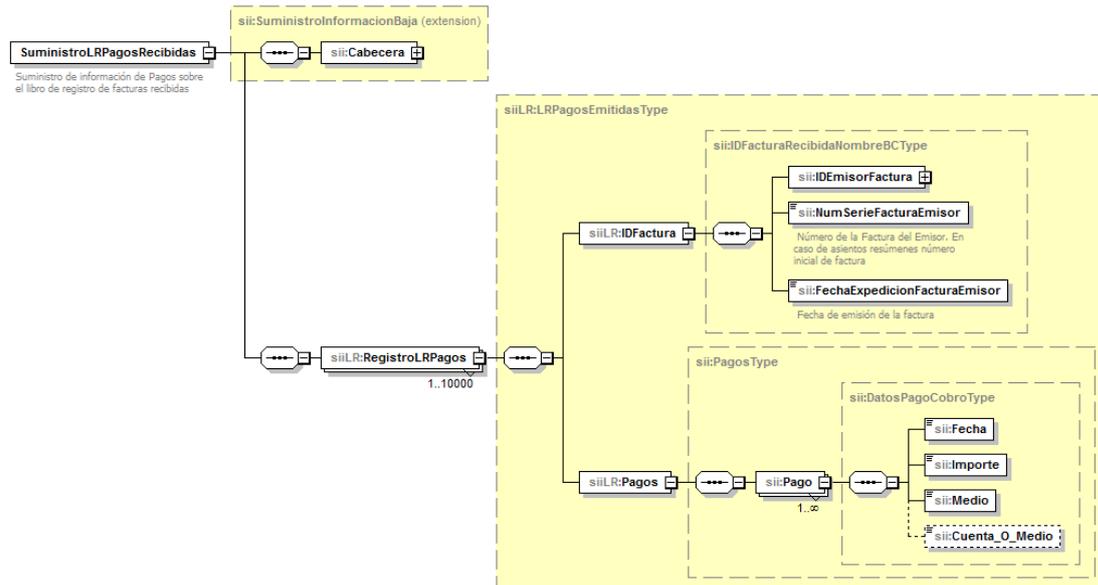

6.2.2.2. Supply of payments against invoices recorded in the Register of invoices received (including registrations and cancellations via negative entry) Special cash-based system

Amendments and removals cannot be made to the supply of payments. To cancel a payment, the collection information must be sent with a minus value

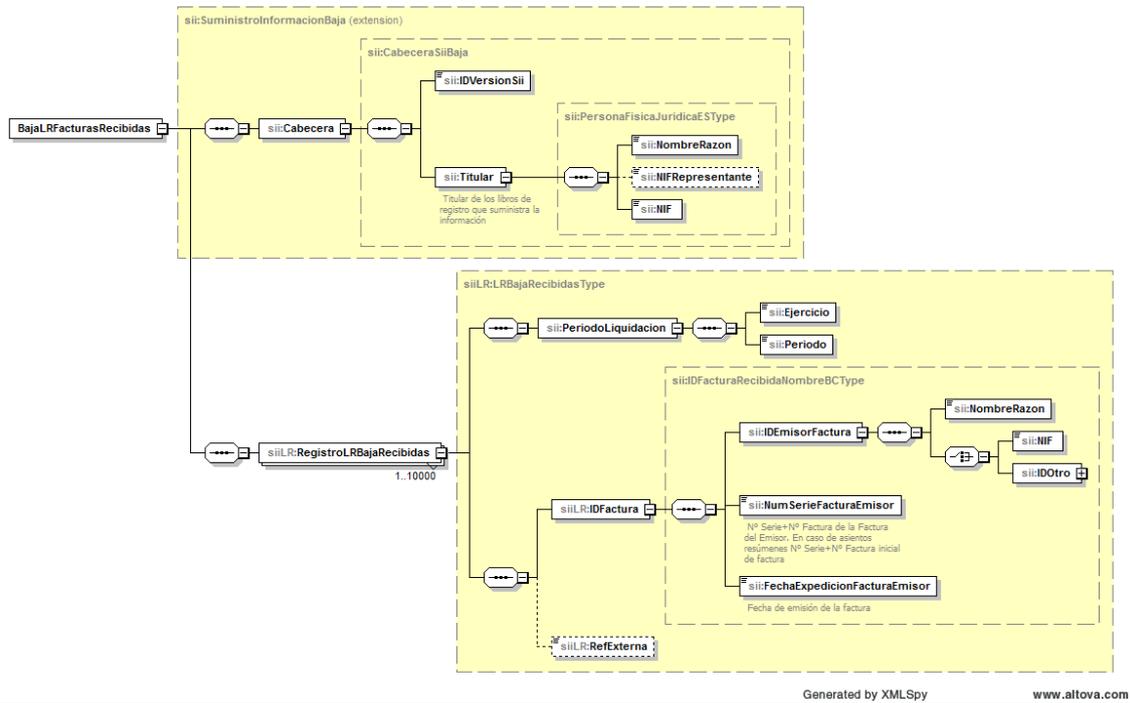

The structure of the request will be as follows:

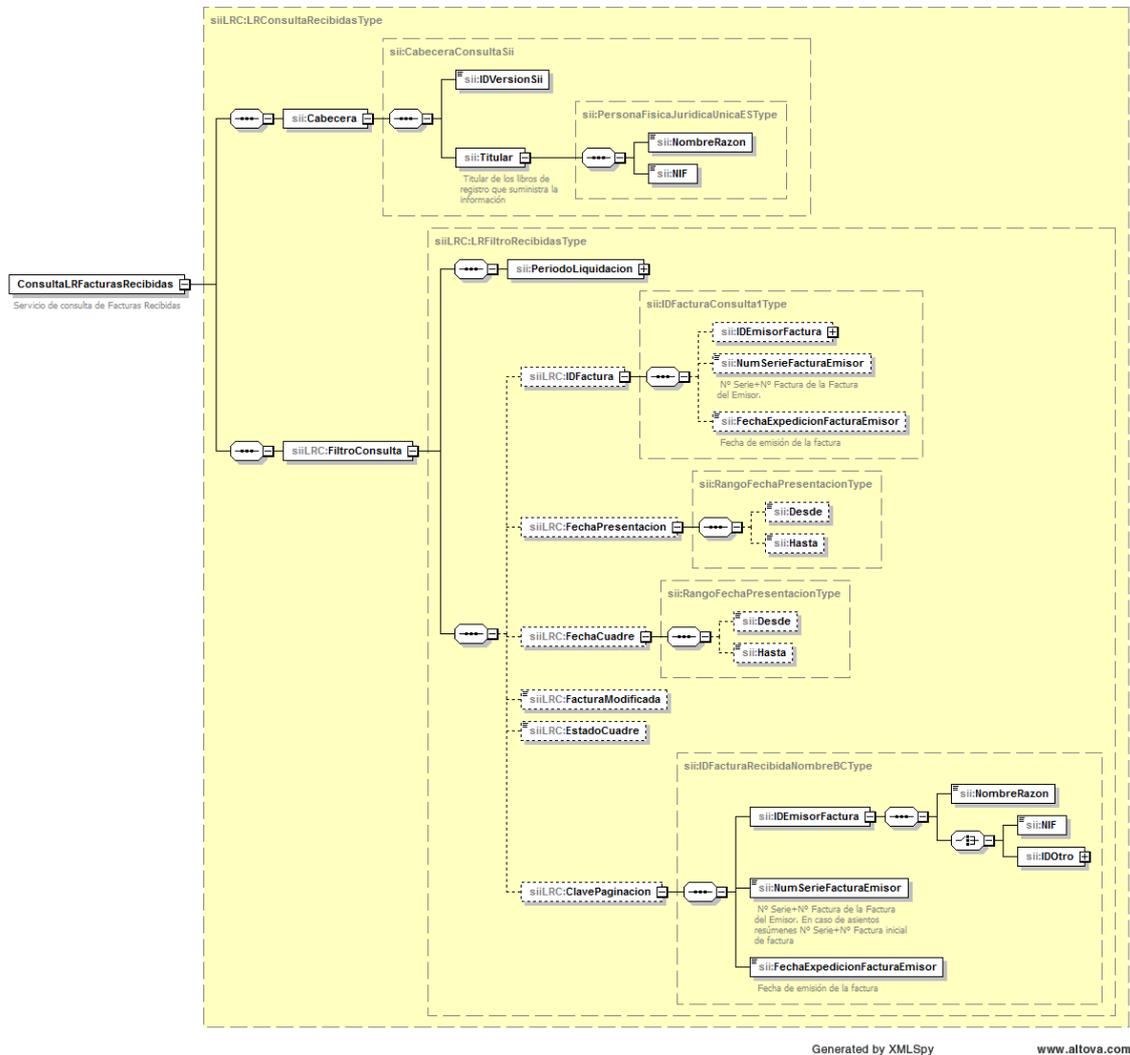

6.2.2.3. Removal of invoices

The structure of the request will be as follows:

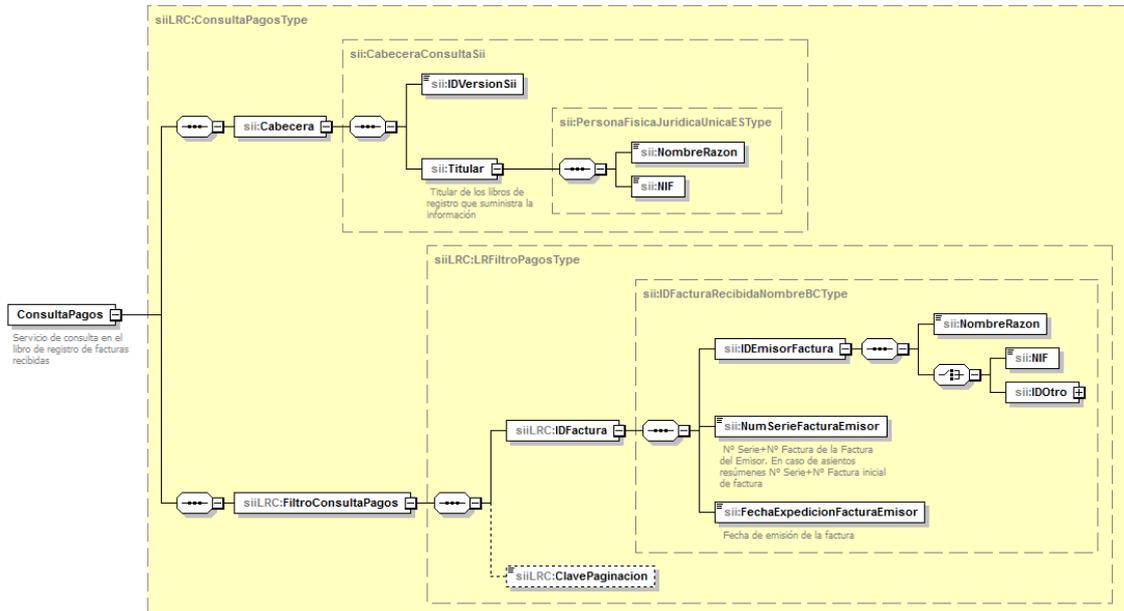

6.2.2.4. Consultation of invoices submitted previously

The structure of the request will be as follows:

6.2.2.5. Consultation of payments submitted previously against invoices recorded in the Register of invoices received.

The structure of the request will be as follows:

Generated by XMLSpy

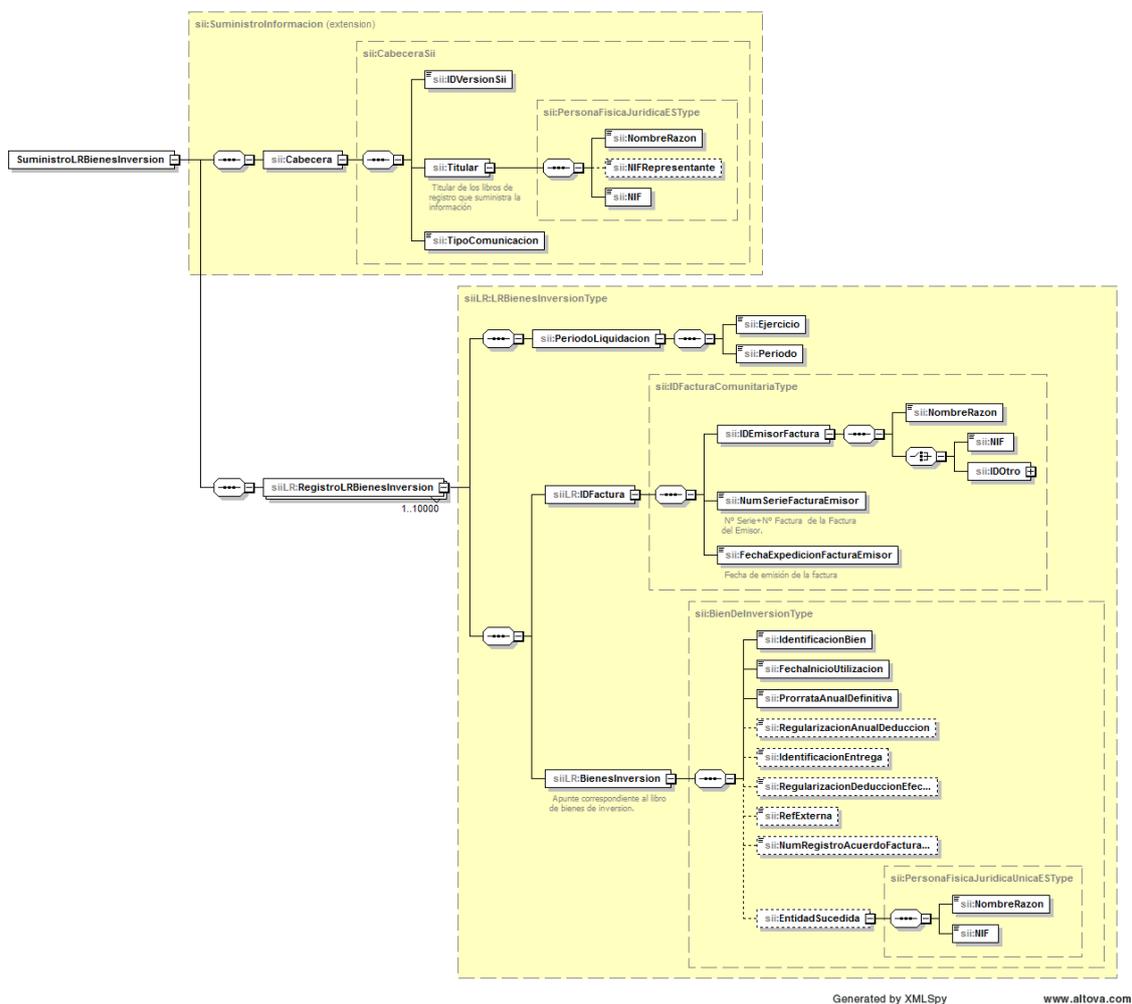

www.altova.com

6.2.3. Capital asset register

6.2.3.1. Registration/Amendment of invoices

The generic structure of the request will be as follows:

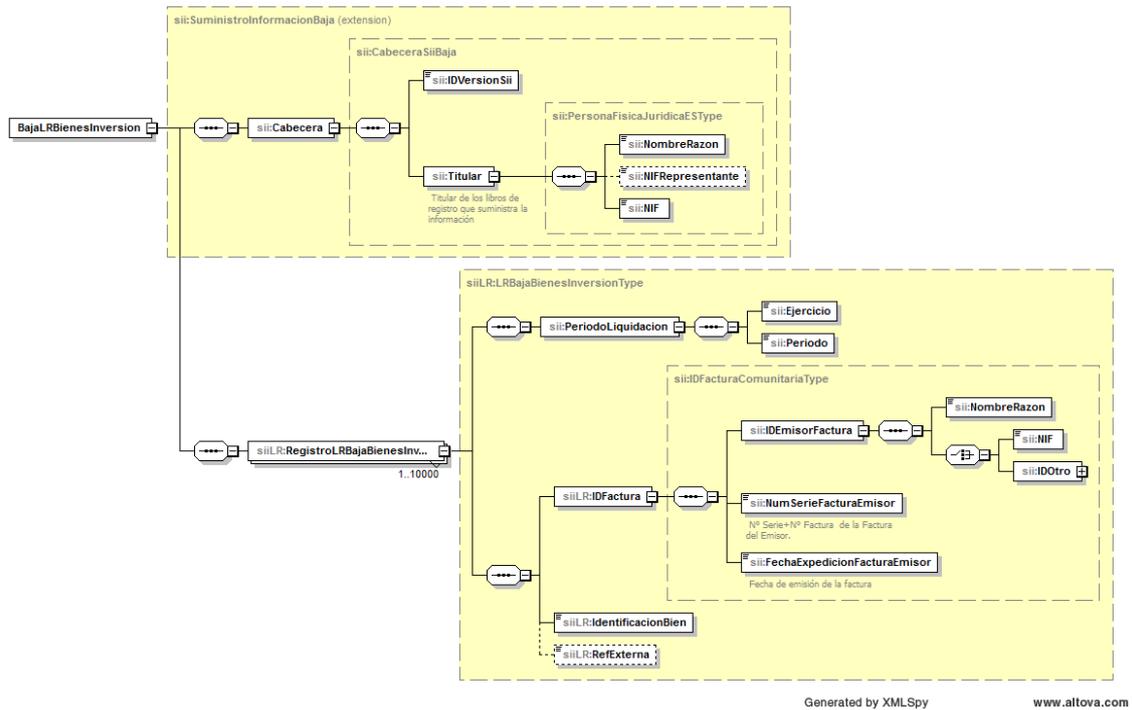

Generated by XMLSpy www.altova.com

6.2.3.2. Removal of invoices

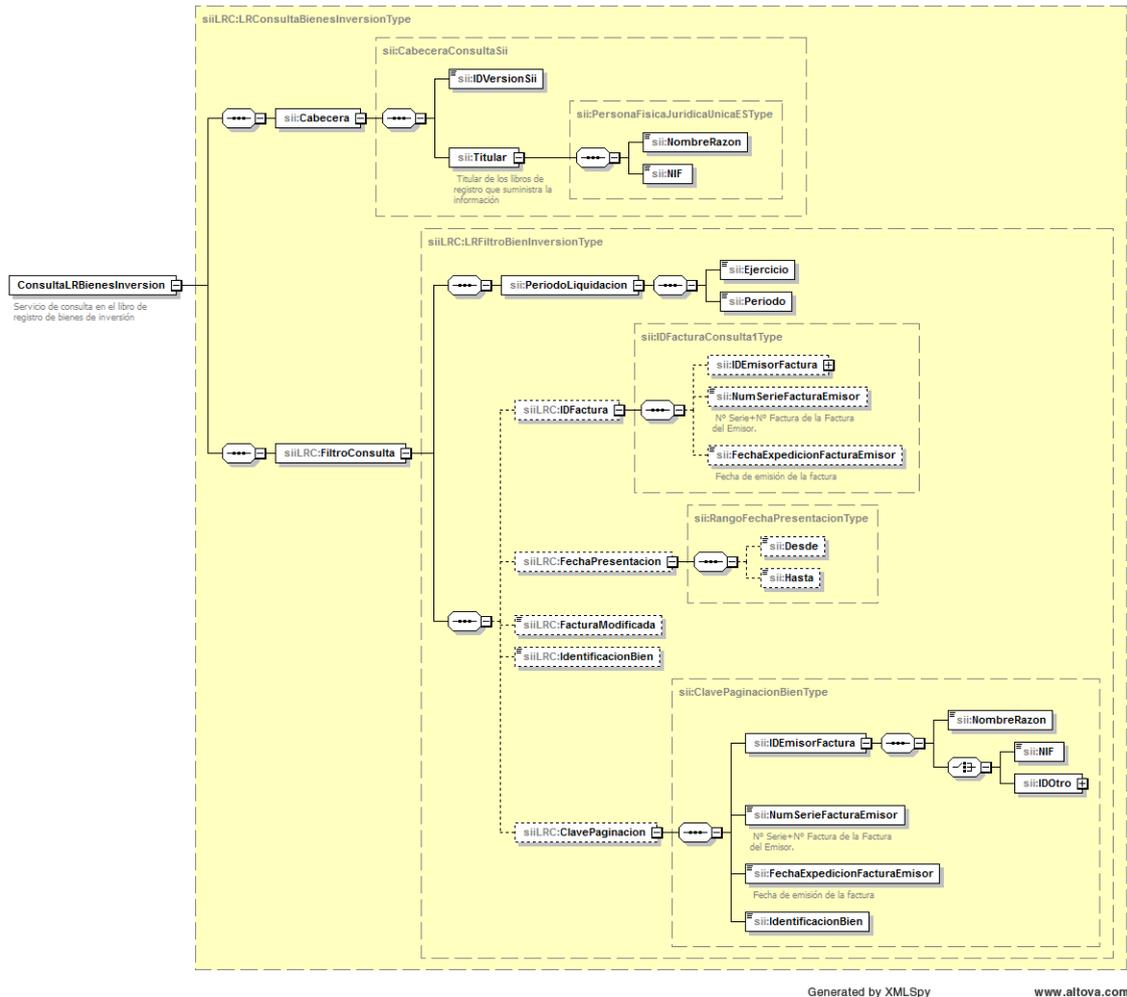

The structure of the request will be as follows:

6.2.3.3. Consultation of invoices submitted previously

The structure of the request will be as follows:

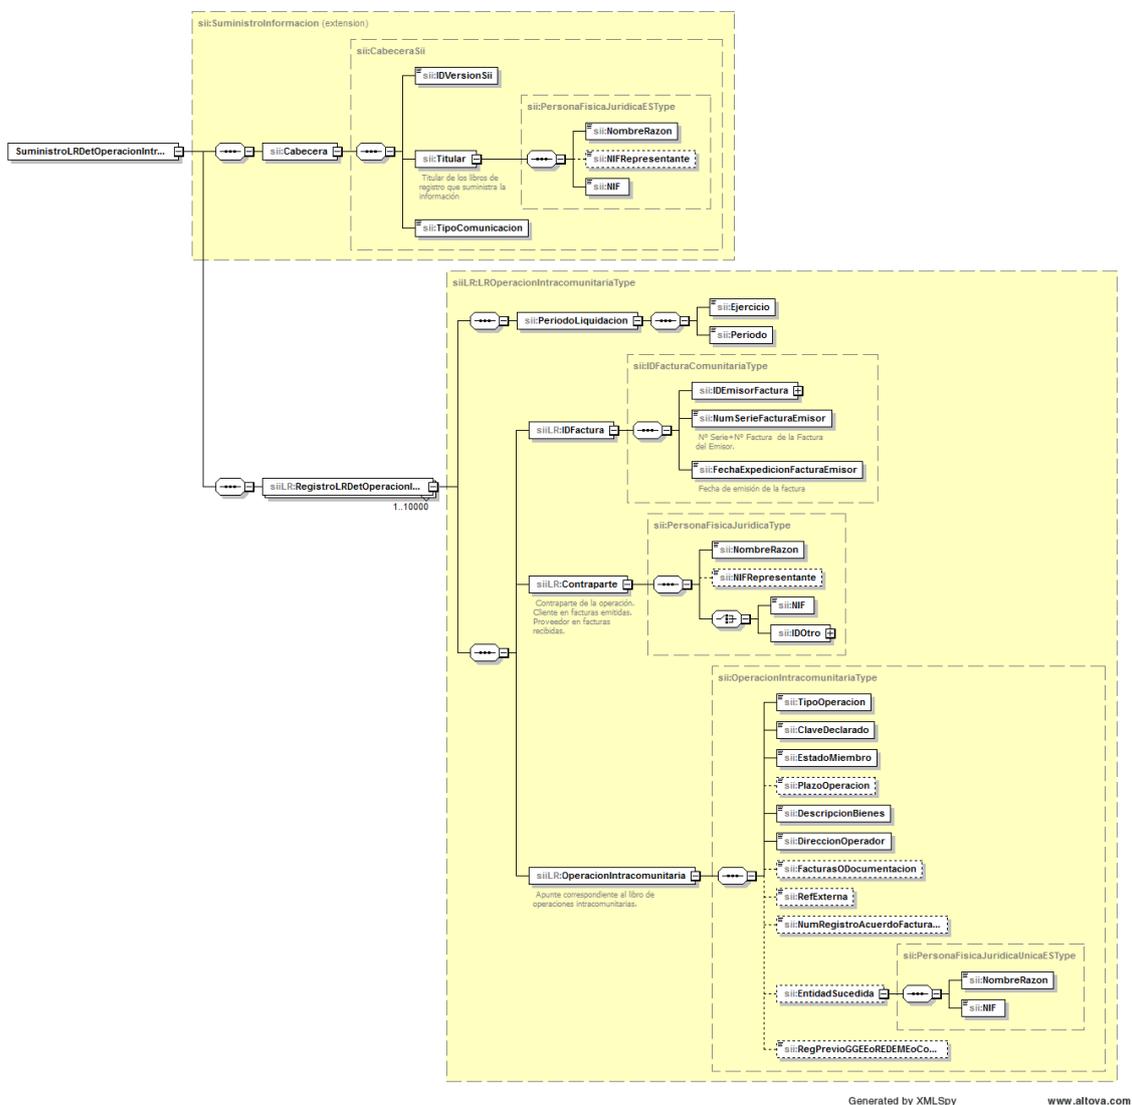

6.2.4. Register of certain intra-EU transactions

6.2.4.1. Registration/Amendment of invoices

The generic structure of the request will be as follows:

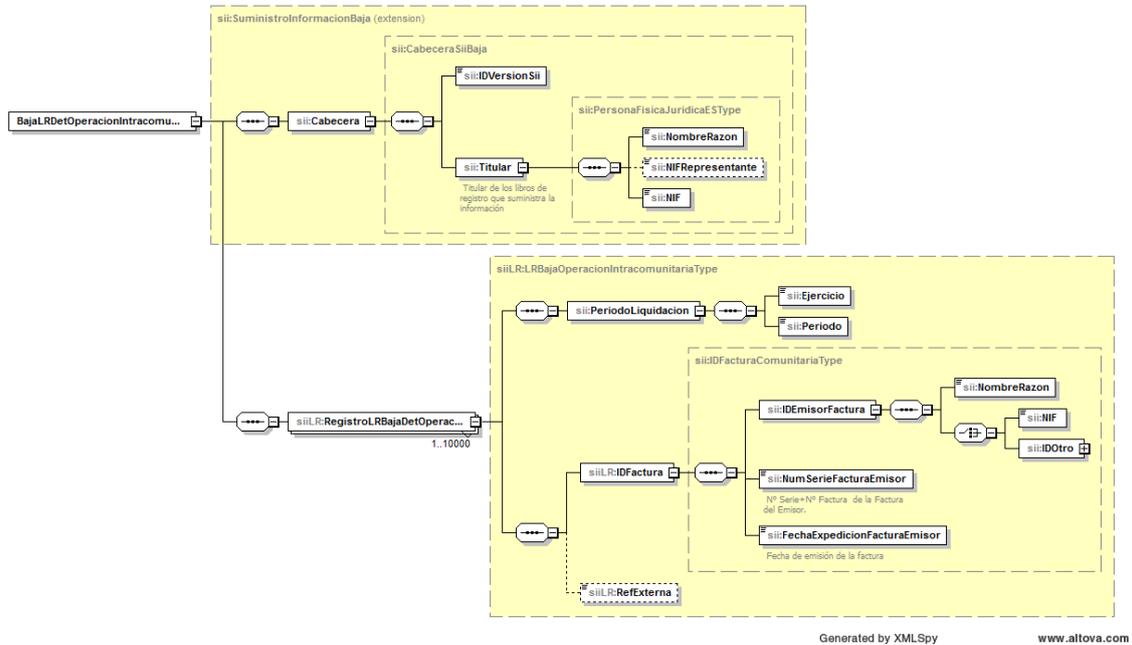

Generated by XMLSpy

www.altova.com

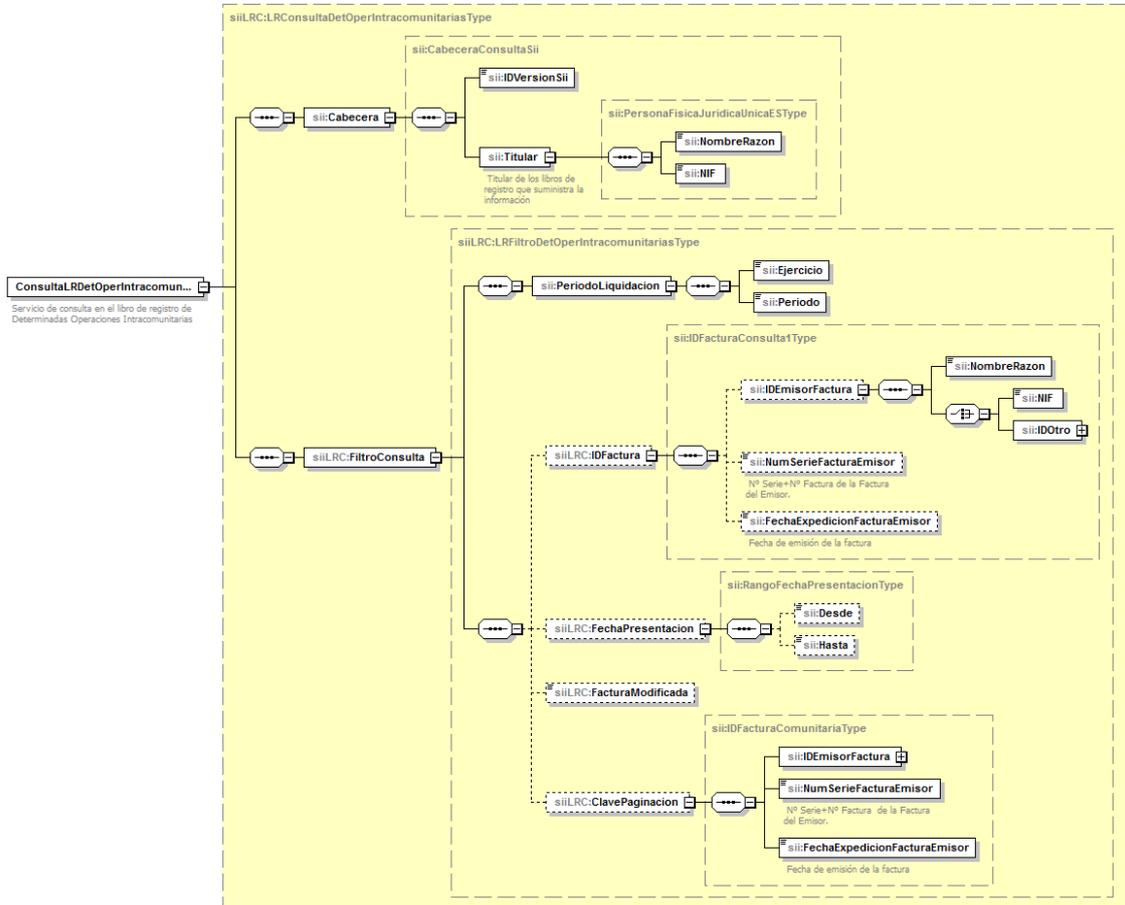

6.2.4.2. Removal of invoices

The structure of the request will be as follows:

6.2.4.3. Consultation of invoices submitted previously

The structure of the request will be as follows:

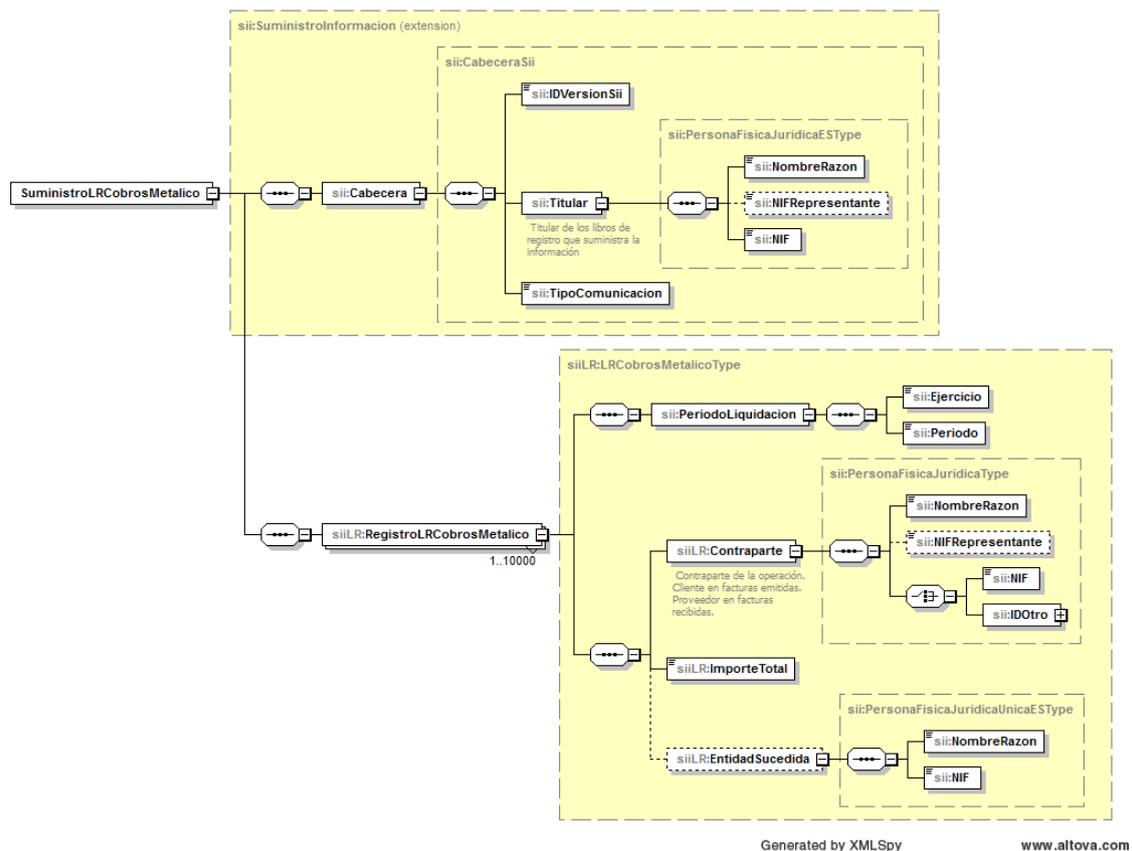

6.2.5. Supply of tax-related transactions charged on an annual basis

6.2.5.1. Collections in cash (Amounts greater than 6,000 euros that were paid in cash during the fiscal year from the same person or entity)

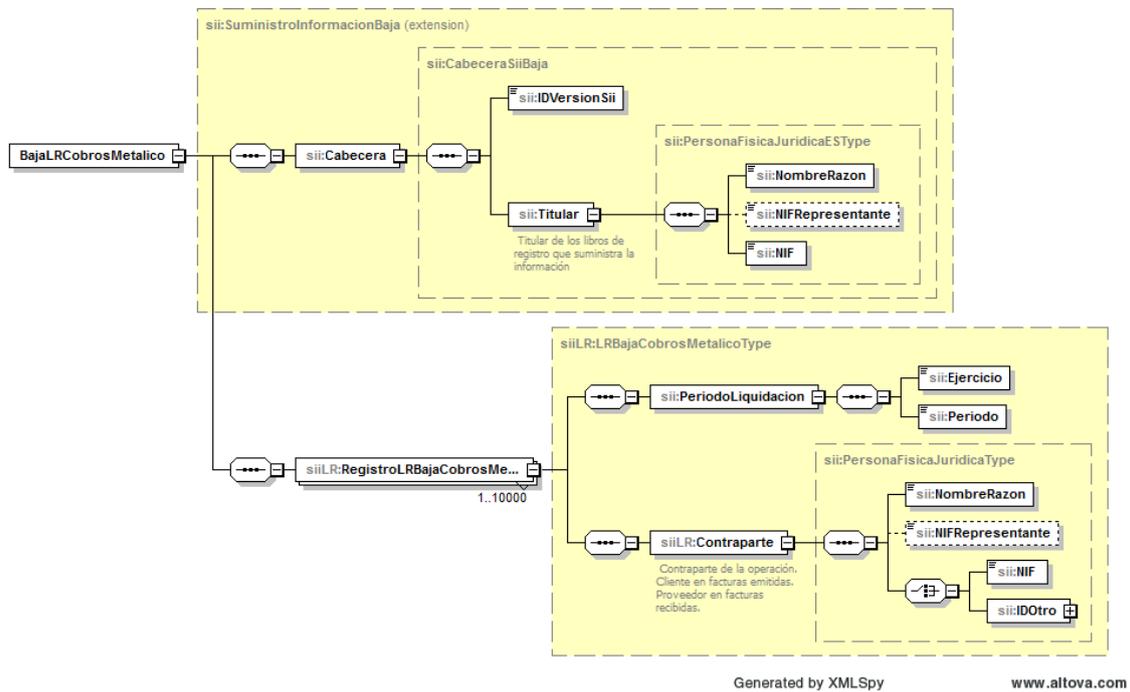

6.2.5.1.1. Registration/Amendment of collections in cash

The generic structure of the request will be as follows:

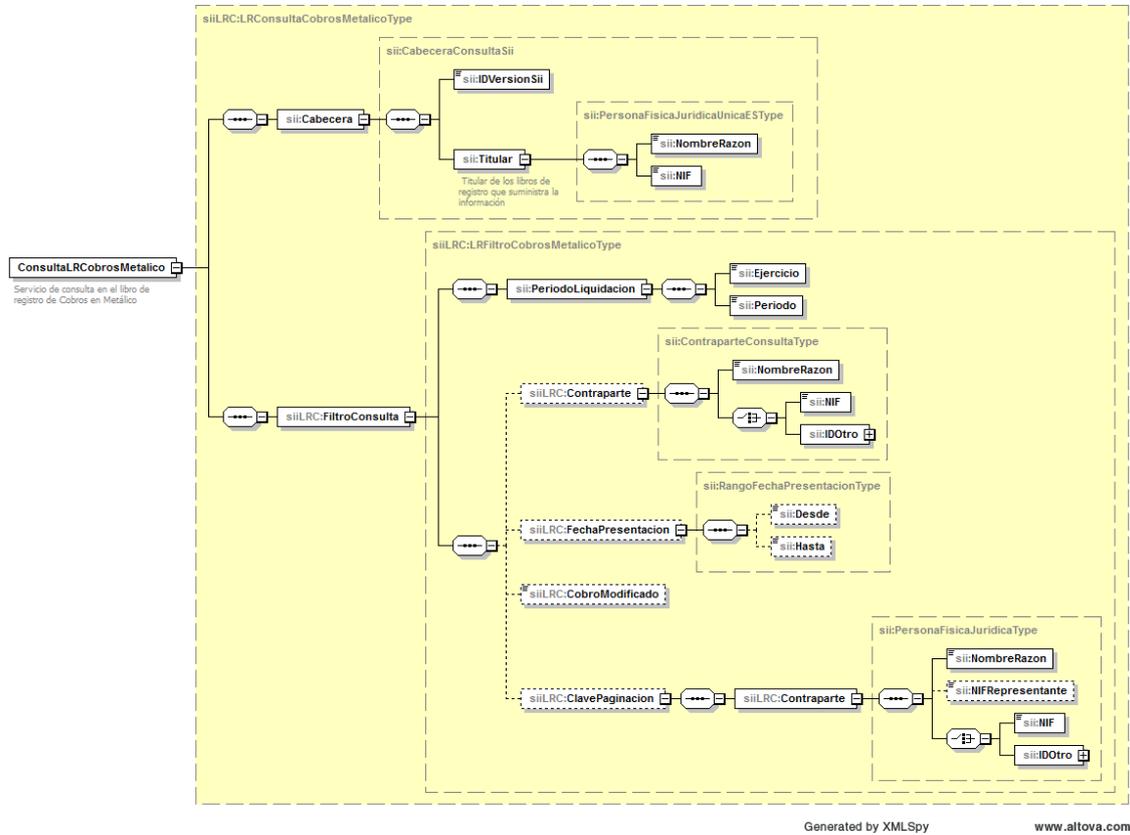

6.2.5.1.2. Removal of collections in cash

6.2.5.1.3. Consultation of collections in cash submitted previously

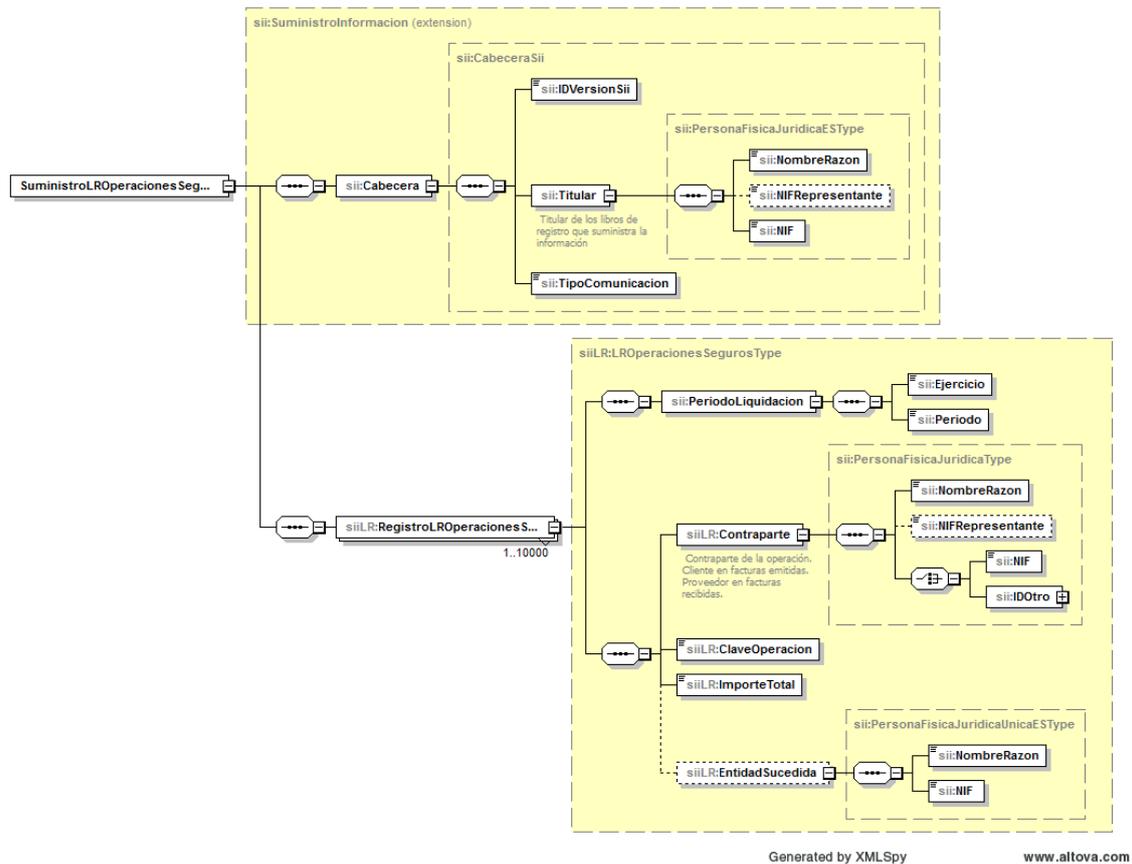

The structure of the request will be as follows:

6.2.5.2. Insurance transactions (Insurance companies shall communicate the premiums or remunerations received and the compensation or loans paid for which they have not issued invoices)

6.2.5.2.1. Registration/amendment of insurance transactions

The generic structure of the request will be as follows:

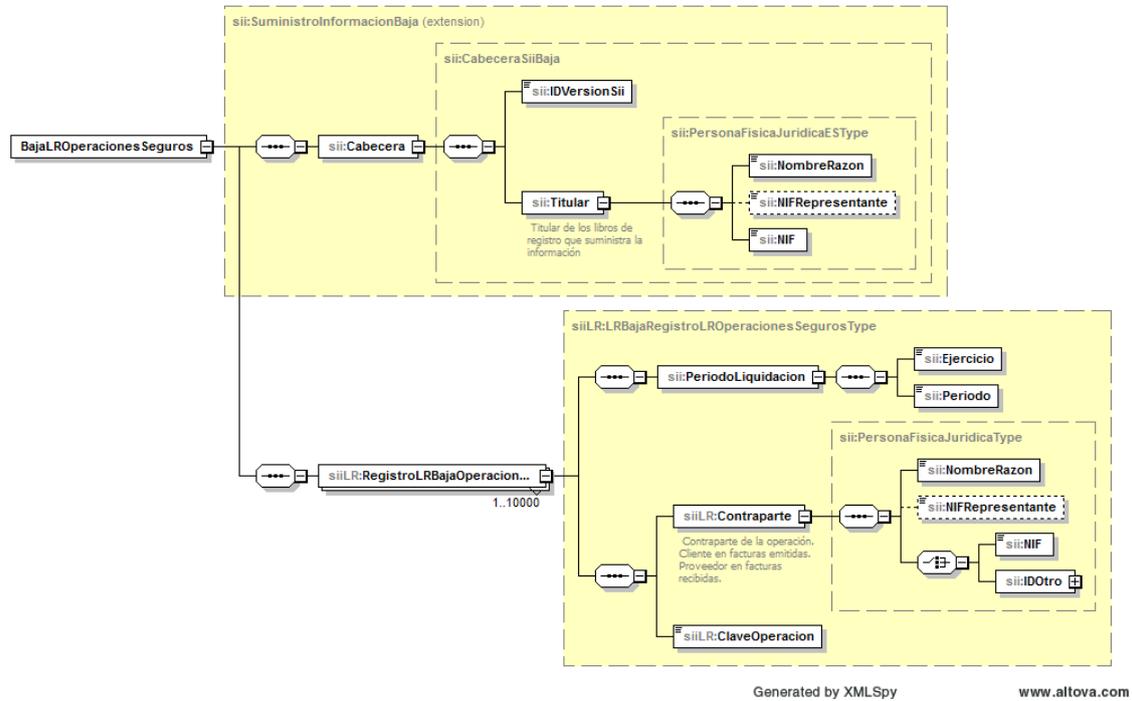

Generated by XMLSpy

www.altova.com

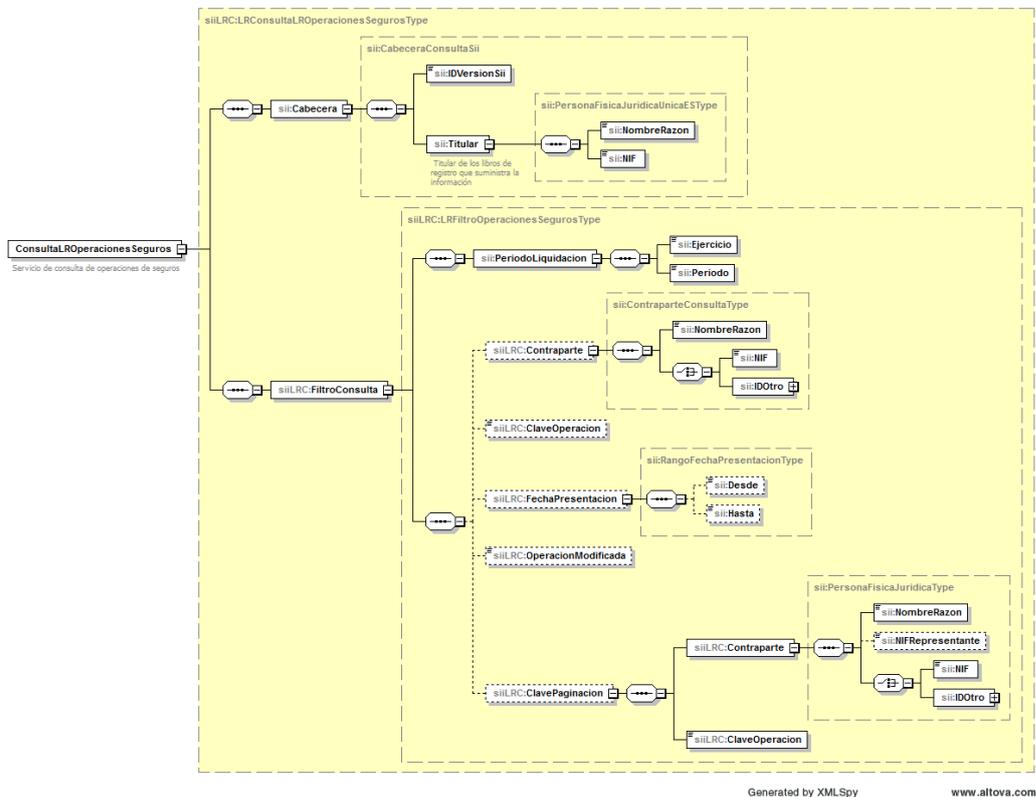

6.2.5.2.2. Removal of insurance transactions

The generic structure of the request will be as follows:

6.2.5.2.3. Consultation of insurance transactions submitted previously

The generic structure of the request will be as follows:

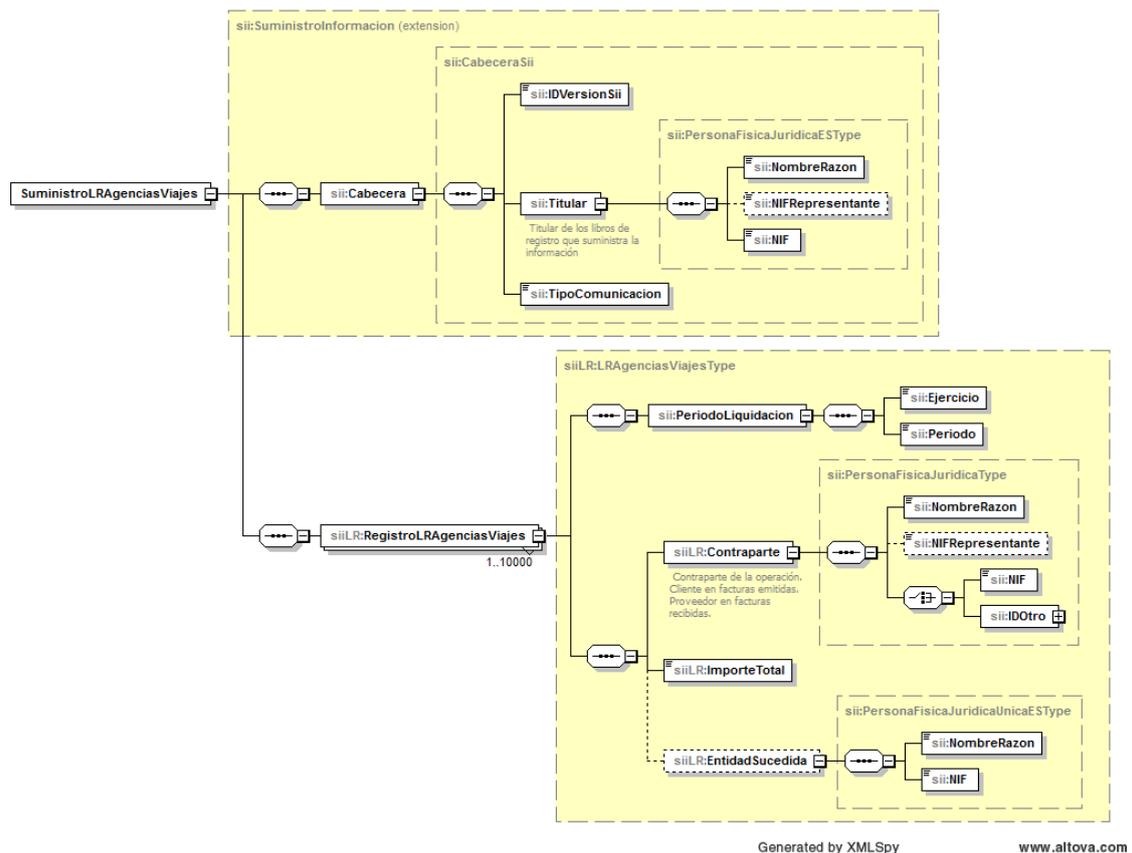

6.2.5.3. Travel agencies. (Provision of services in the performance of which they act as intermediaries on behalf of and for the account of others, as referred to in Section 7.b) of the fourth additional provision of Royal Decree 1619/2012, of 30 November)

6.2.5.3.1. Registration/amendment of travel agency transactions

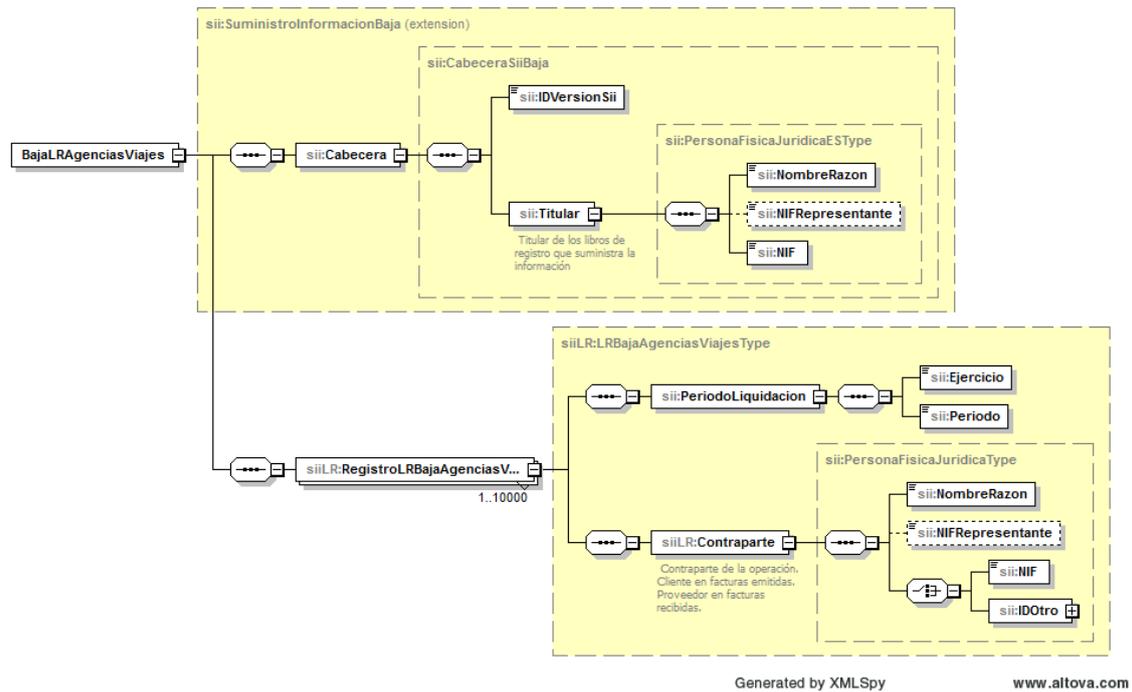

The generic structure of the request will be as follows:

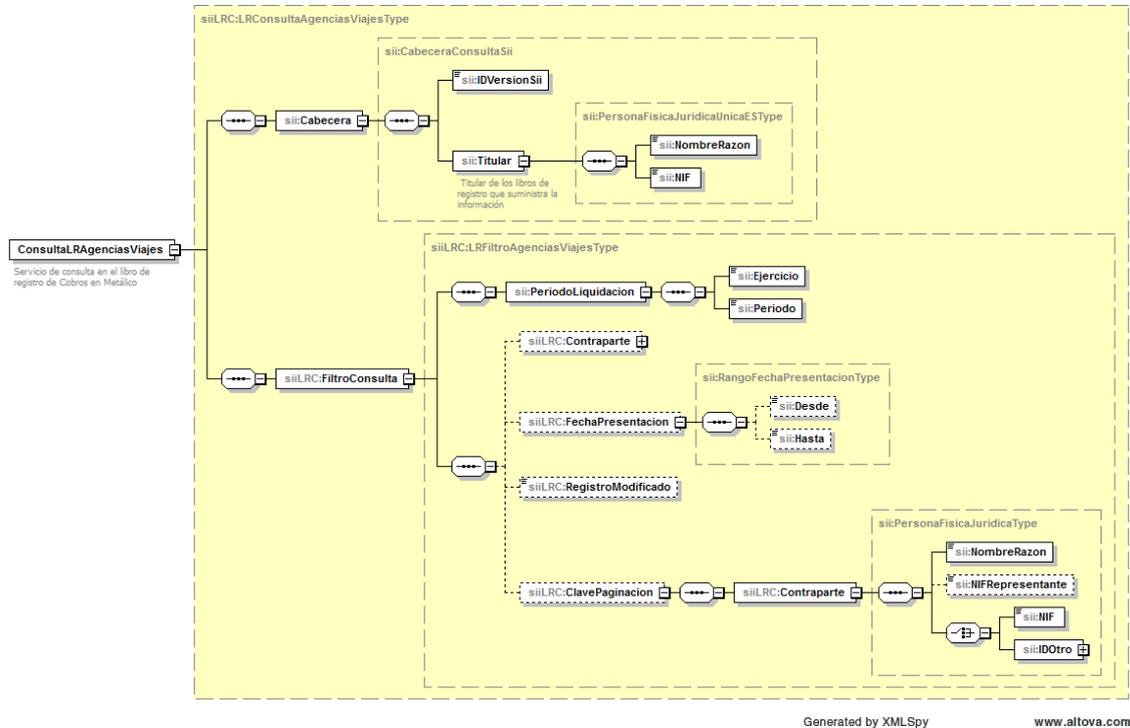

6.2.5.3.2. Removal of travel agency transactions

The generic structure of the request will be as follows:

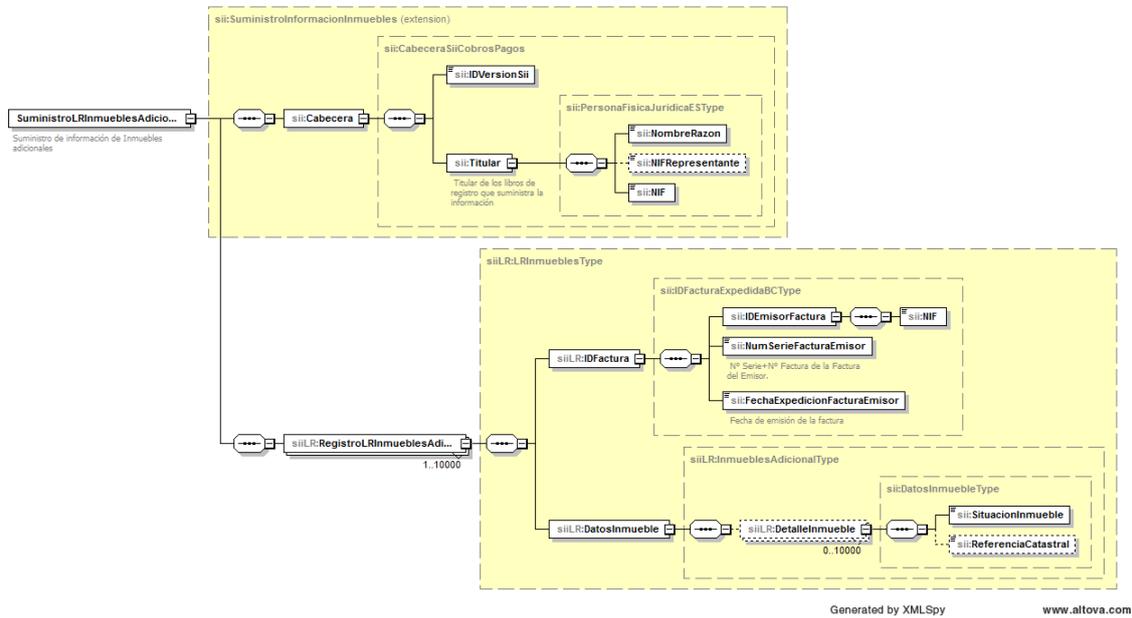

6.2.5.3.3. Consultation of travel agency transactions submitted previously

The generic structure of the request will be as follows:

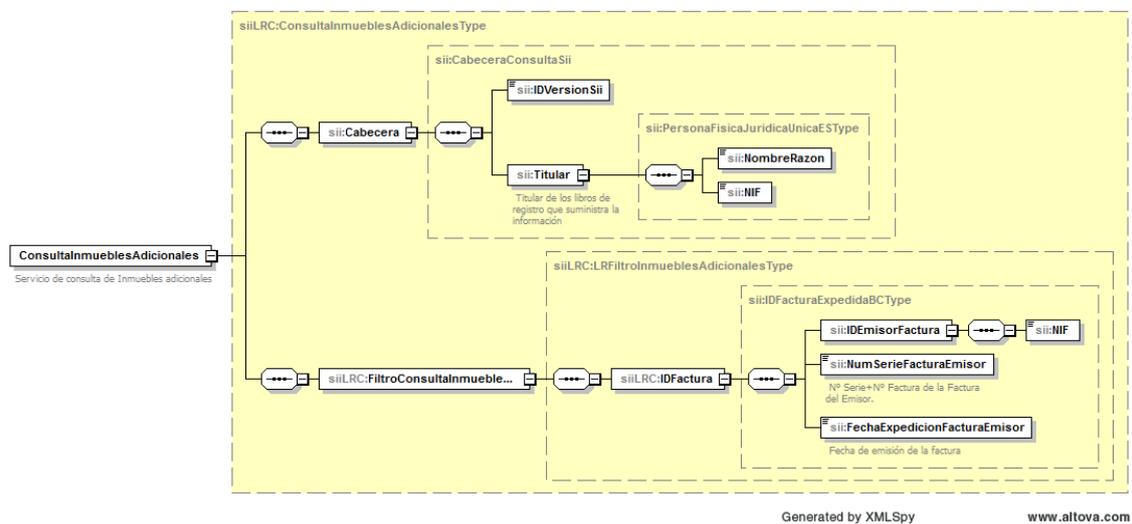

6.2.6. Supply of Additional Property Information for the Register of Invoices Issued (when the number of properties to be reported is greater than 15, the remaining properties associated with the same invoice will be reported according to the following detail)

6.2.6.1. Registration of Additional Property Information

6.2.6.2. Consultation of Additional Property Information

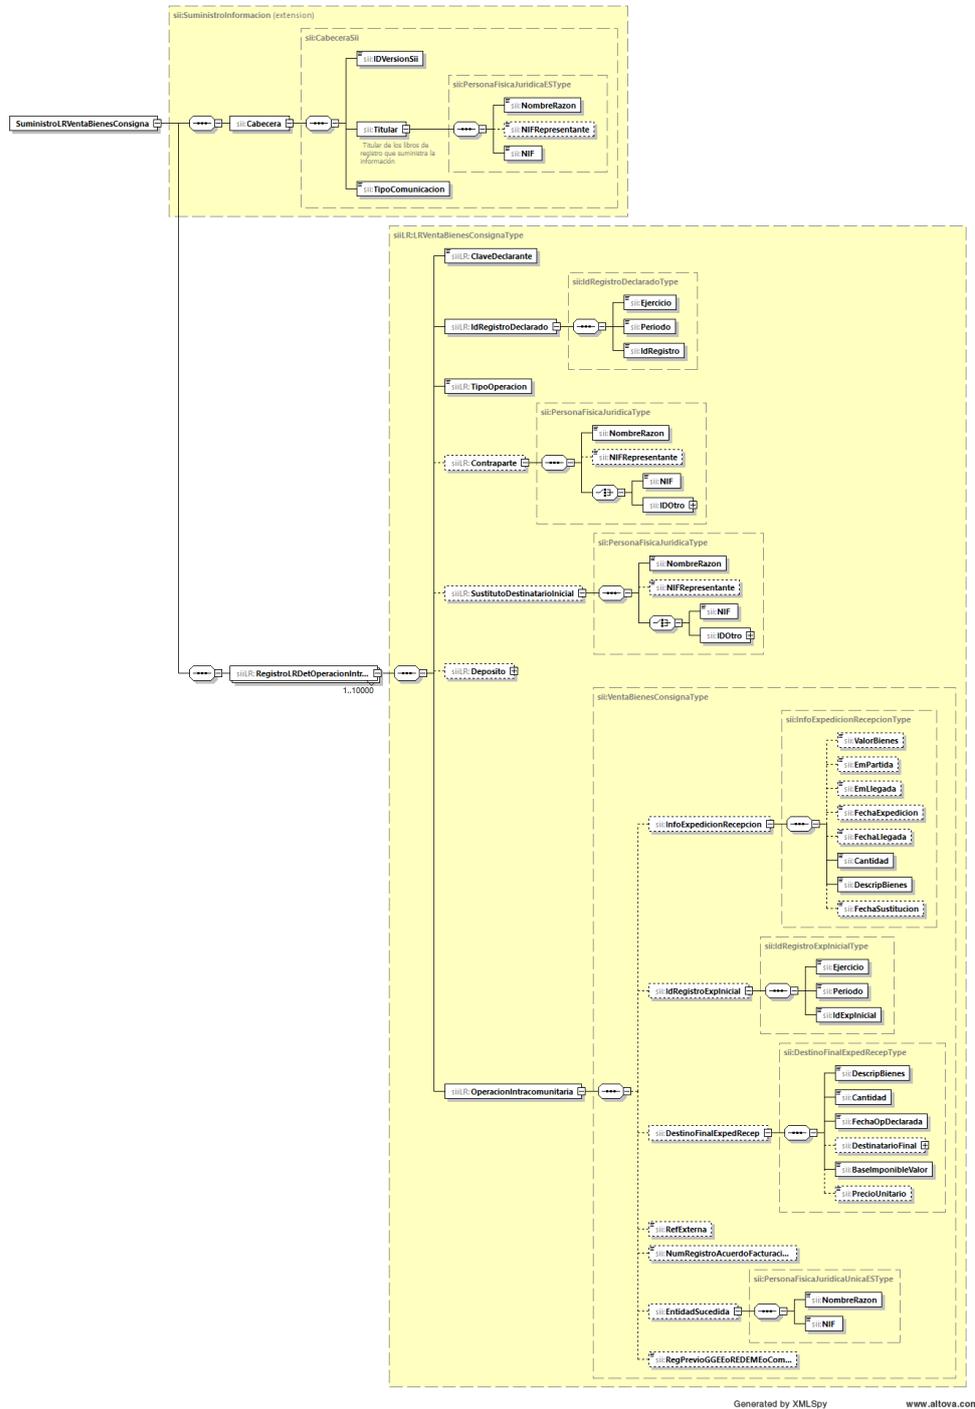

6.2.7. Register of Certain intra-EU Transactions. Sale of goods on consignment

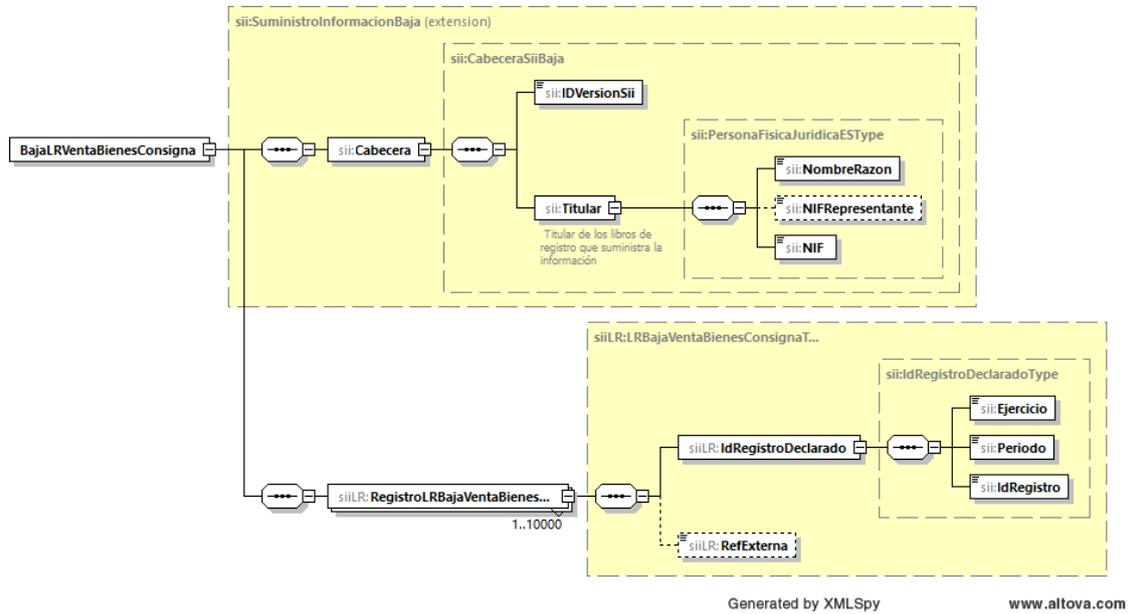

6.2.7.1. Registration/Modification of sale of consignment goods

The generic structure of the request will be as follows:

6.2.7.2. Removal of consignment goods from sale

The structure of the request will be as follows:

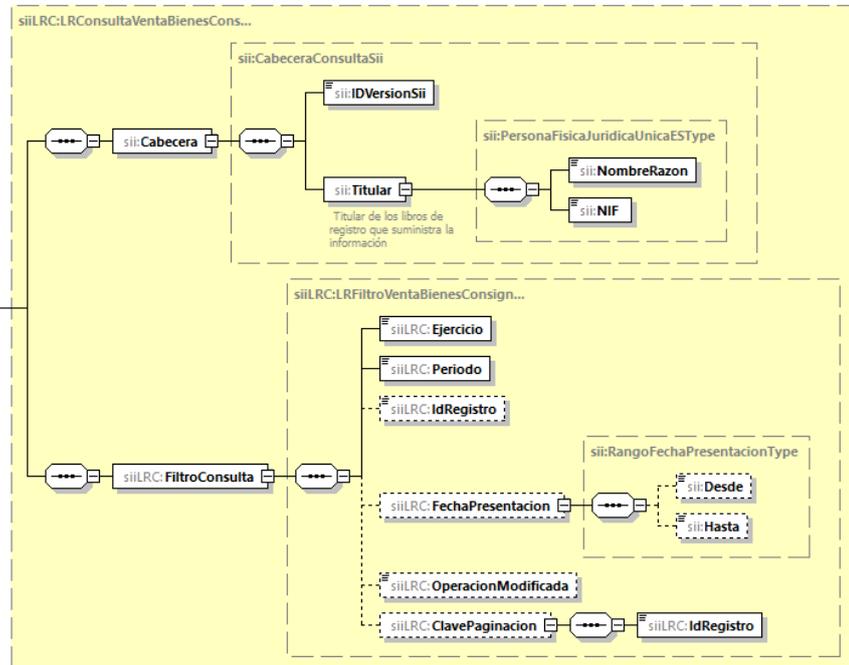

6.2.7.3. Consultation of consignment sales previously submitted

The structure of the request will be as follows:

ConsultaLRConsultaVentaBienes...
Servicio de consulta en el libro de registro de
Venta de Bienes en Consigna

Generated by XMLSpy

www.altova.com

“Response” XML sent by the AEAT:

When the request message has been received correctly by the AEAT and the information requested is ready to be processed, the “Response” XML document will be sent with the corresponding information. In this case, it will consist of:

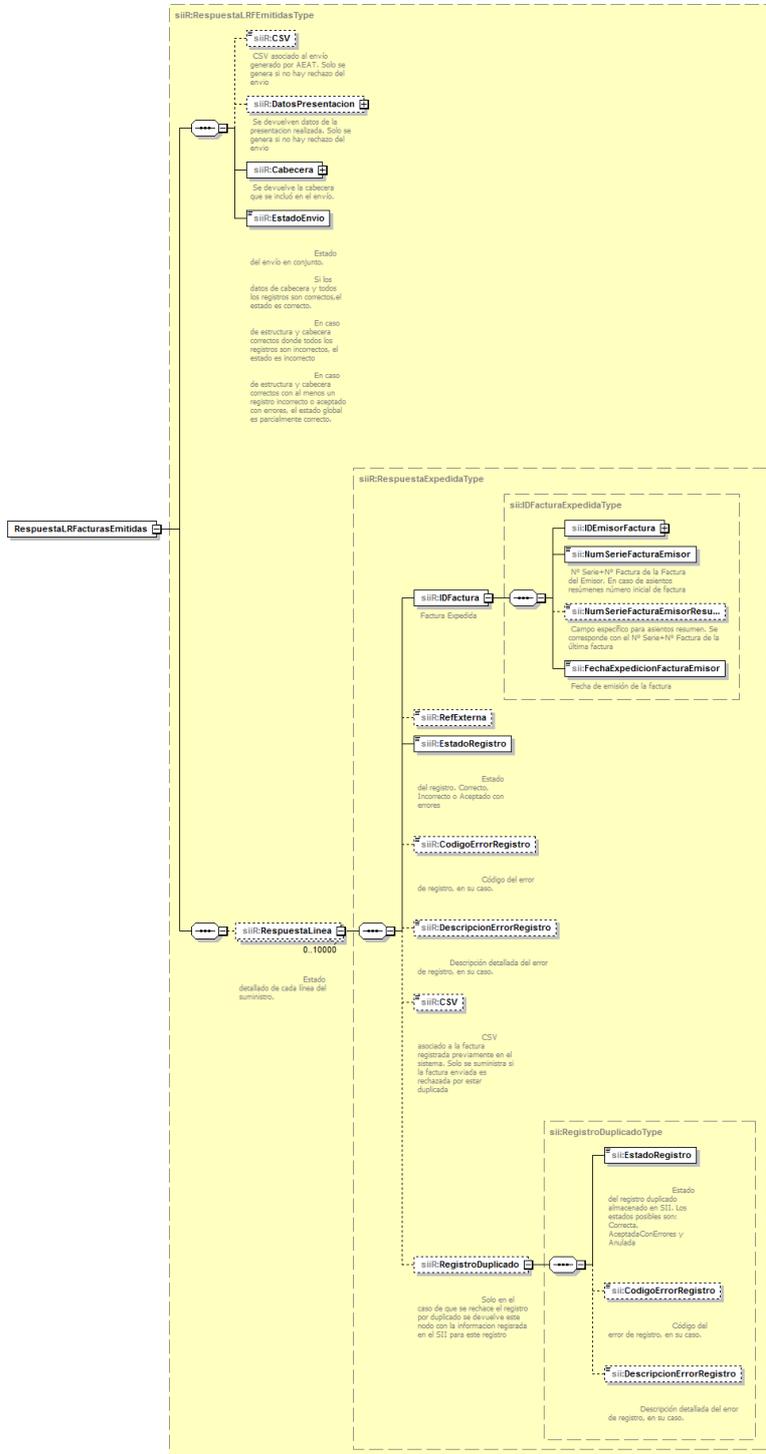

- Header
- List of invoices accepted, rejected or accepted with errors

6.2.8. Invoices issued register

6.2.8.1. Response concerning the Registration/Amendment of invoices

The generic structure of the response will be as follows:

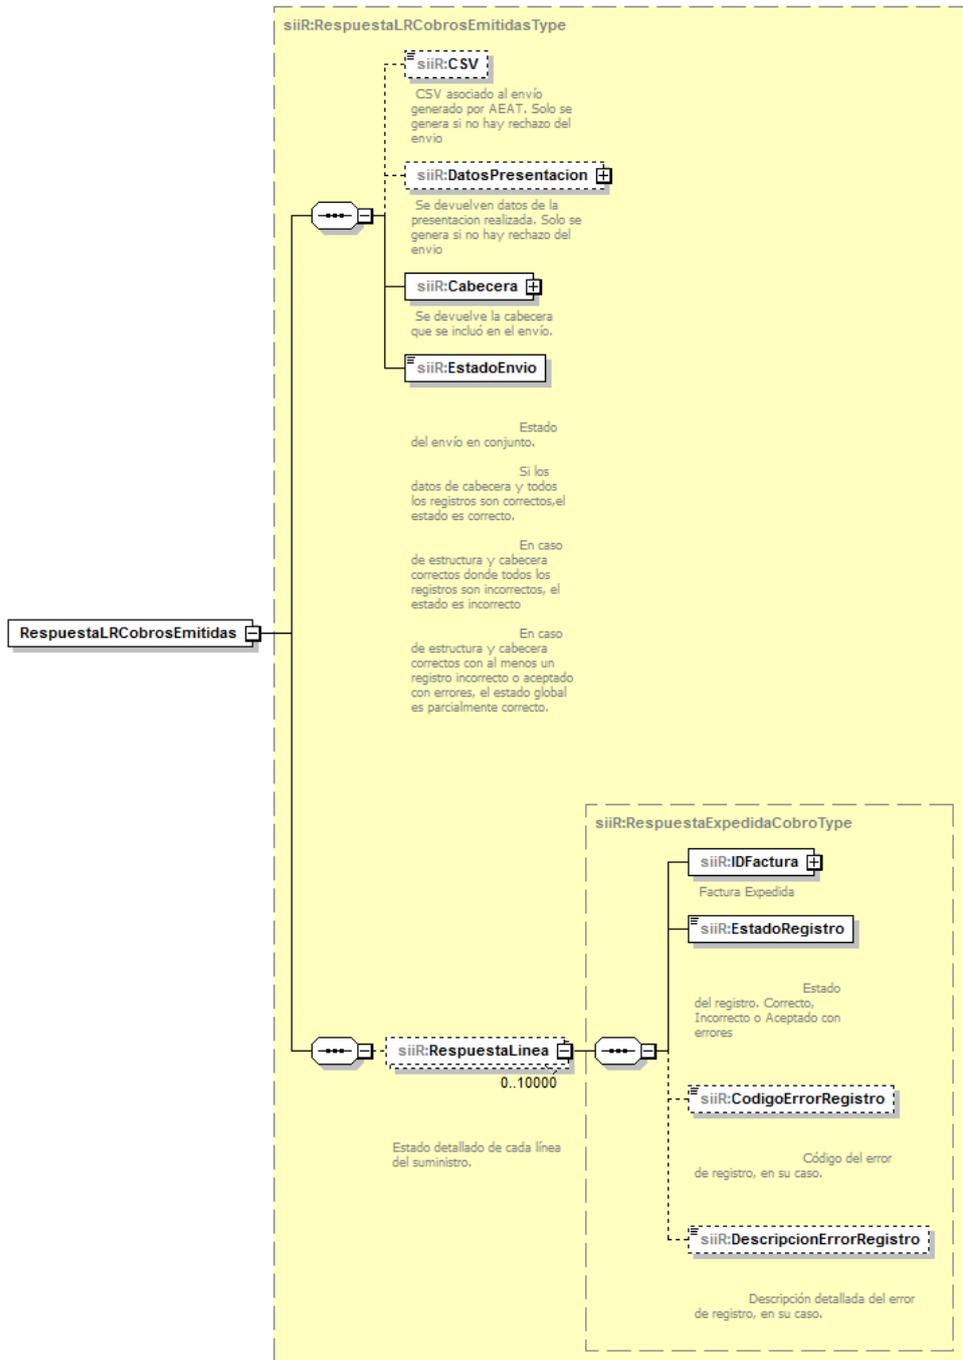

Generated by XMLSpy www.altova.com

6.2.8.2. Response concerning the supply of collections against invoices recorded in the Invoices issued register

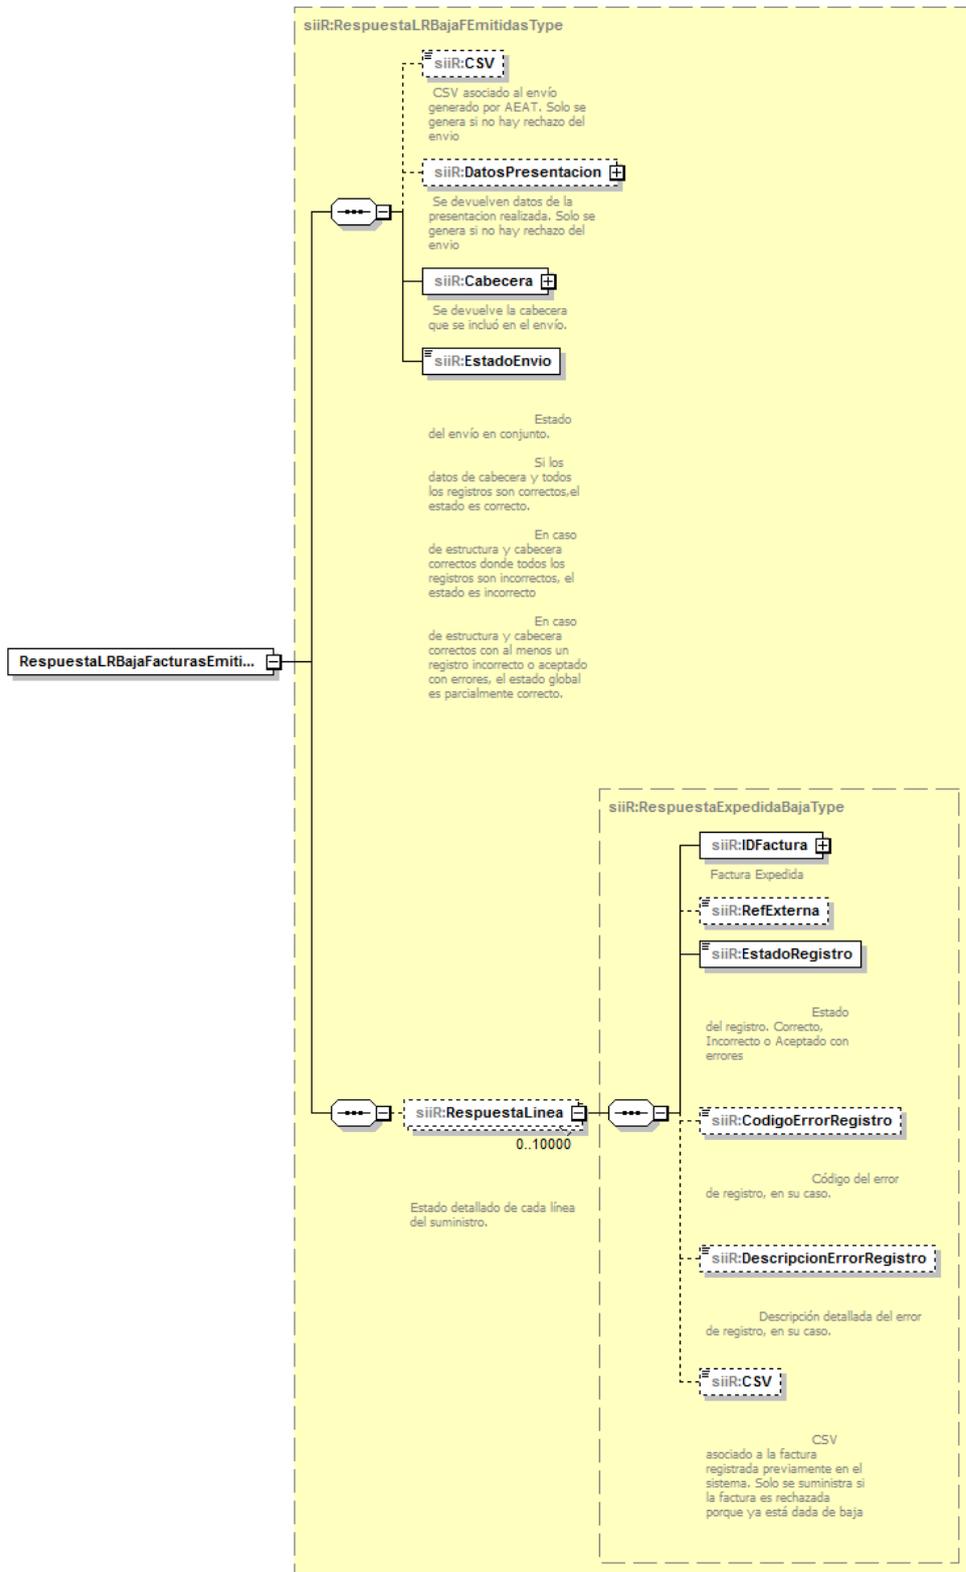

The generic structure of the response will be as follows:

6.2.8.3. Response concerning the removal of invoices

The structure of the response will be as follows:

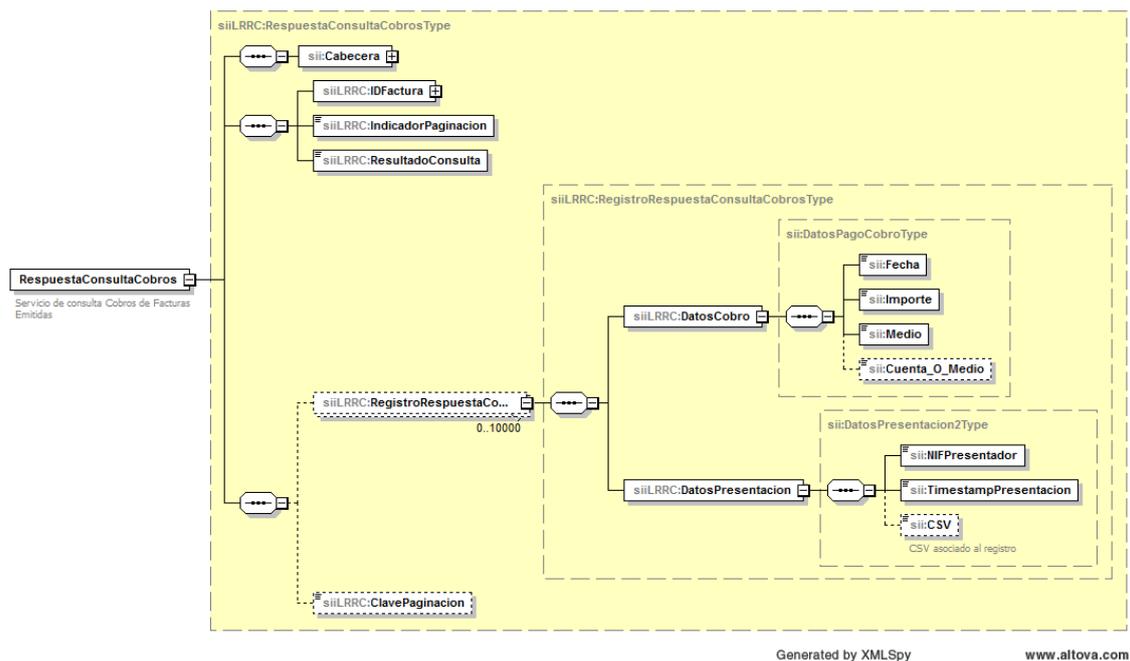

Generated by XMLSpy

www.altova.com

6.2.8.5. Response concerning the Consultation of collections submitted previously against invoices recorded in the Invoices issued register.

The structure of the response will be as follows:

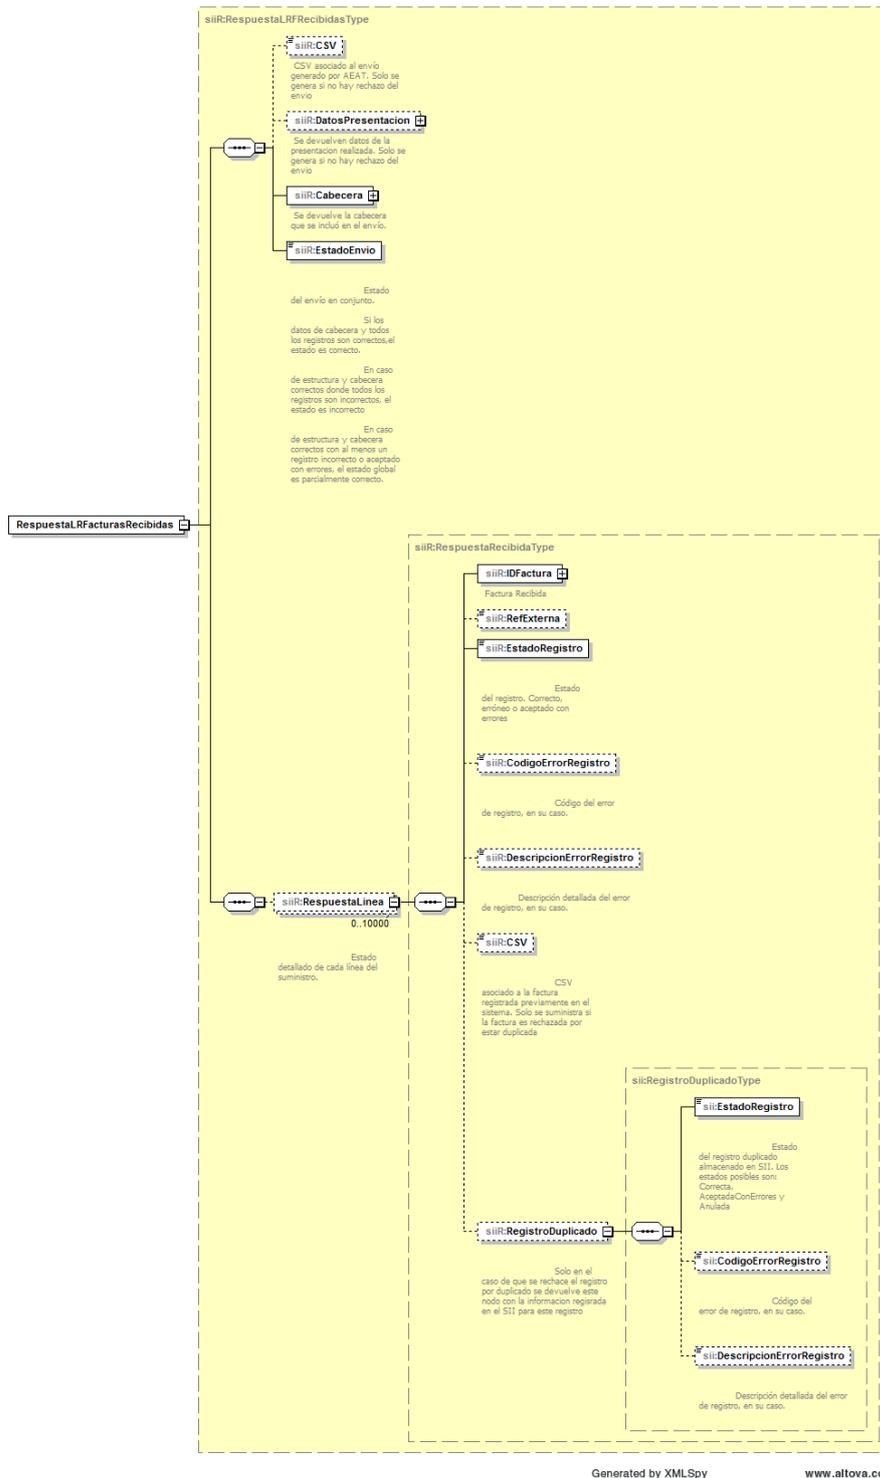

6.2.9. Invoices received register

6.2.9.1. Response concerning the Registration/Amendment of invoices

The generic structure of the response will be as follows:

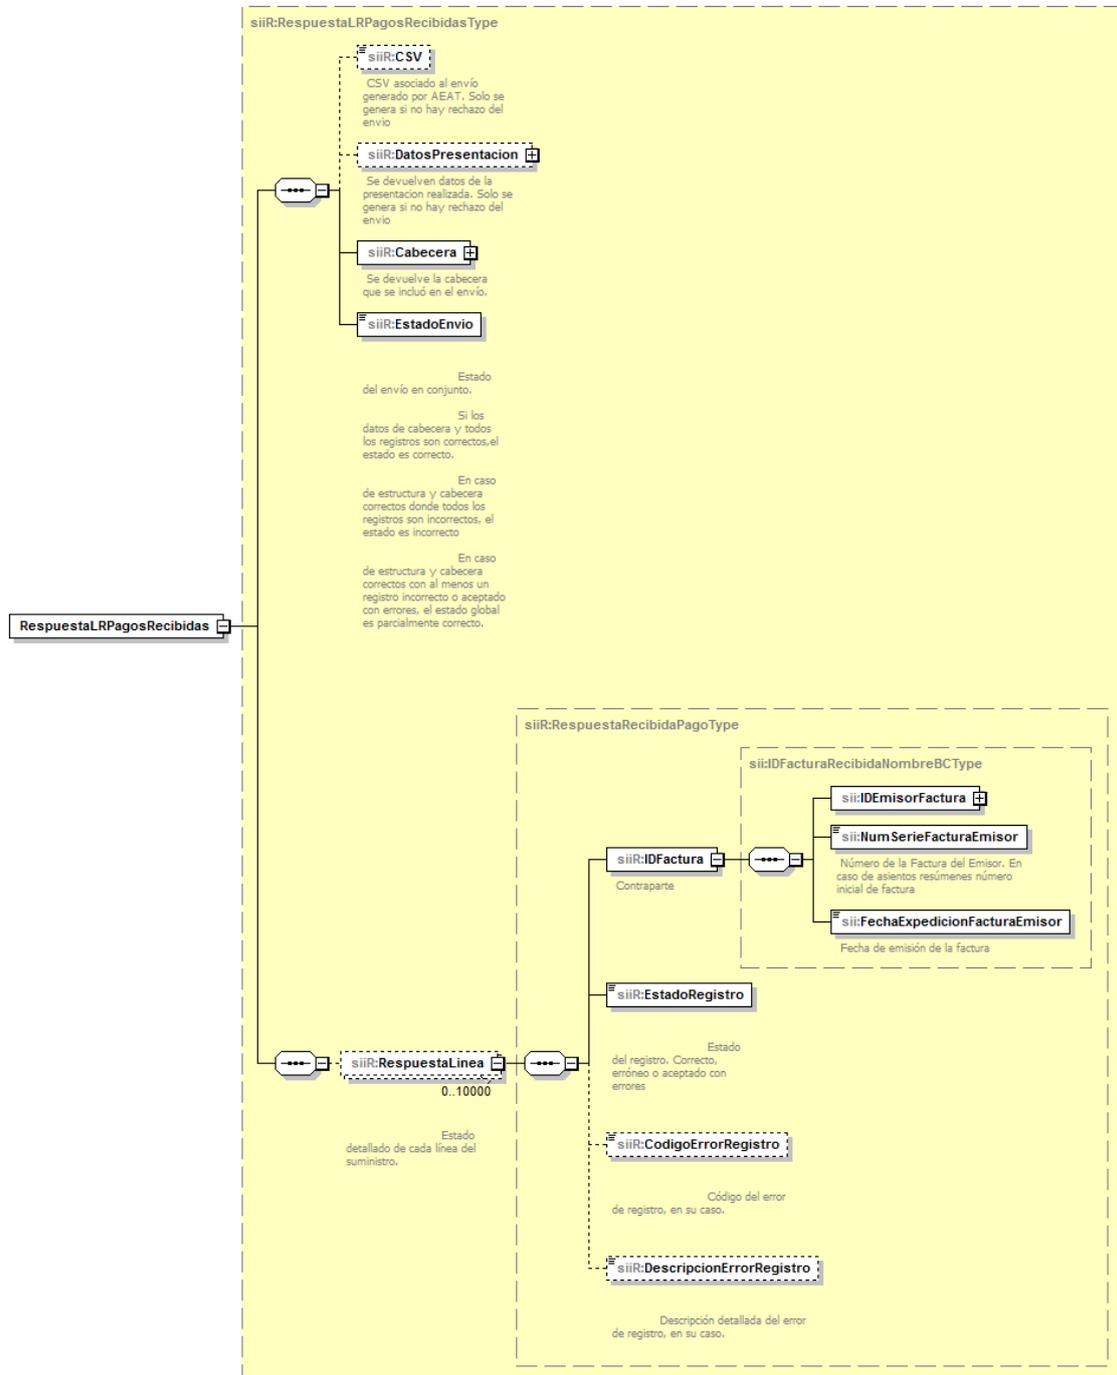

Generated by XMLSpy

www.altova.com

6.2.9.2. Response concerning the supply of payments against invoices recorded in the Invoices received register

The generic structure of the response will be as follows:

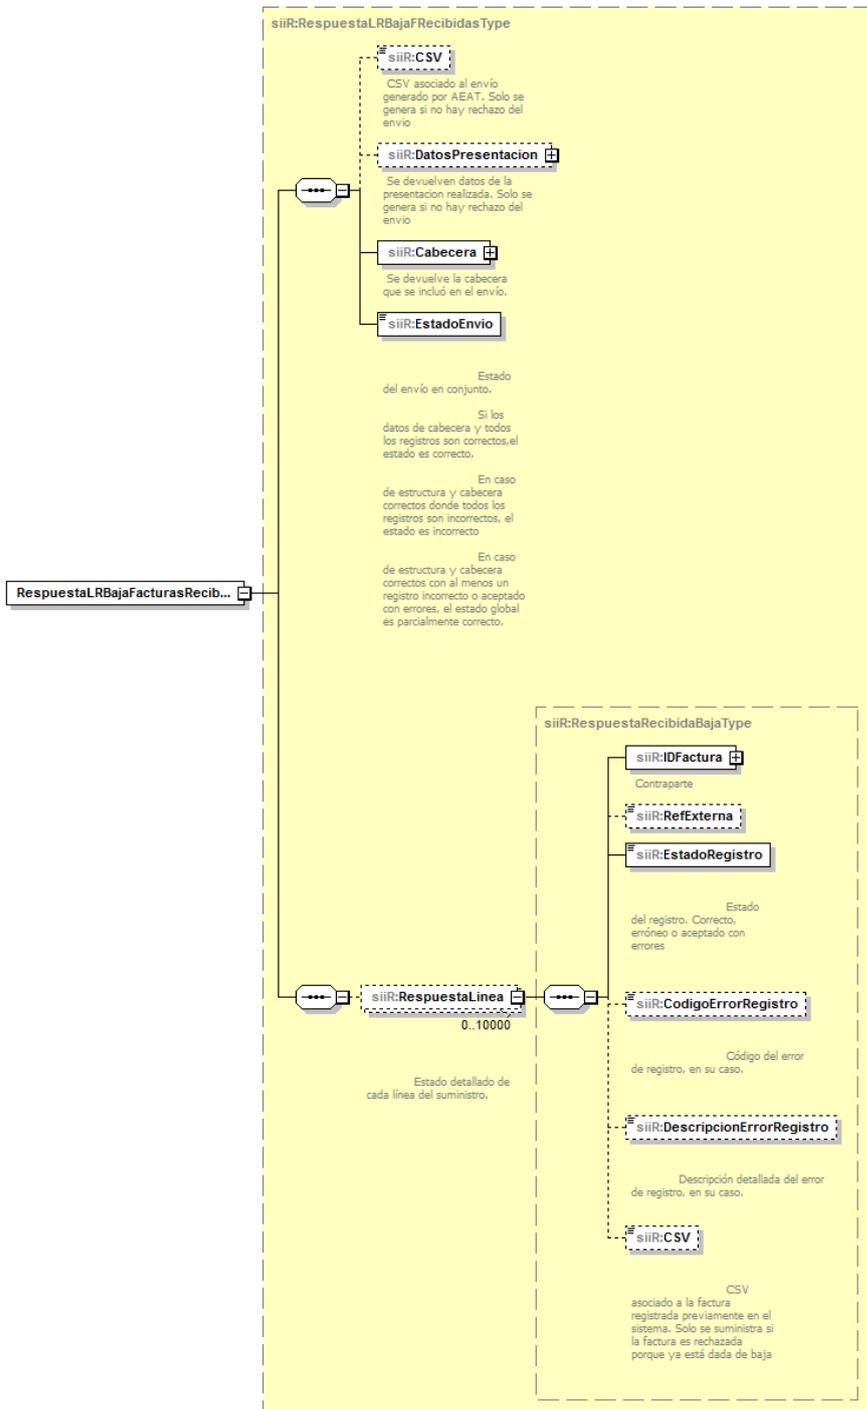

Generated by XMLSpy

www.altova.com

6.2.9.3. Response concerning the removal of invoices

The structure of the response will be as follows:

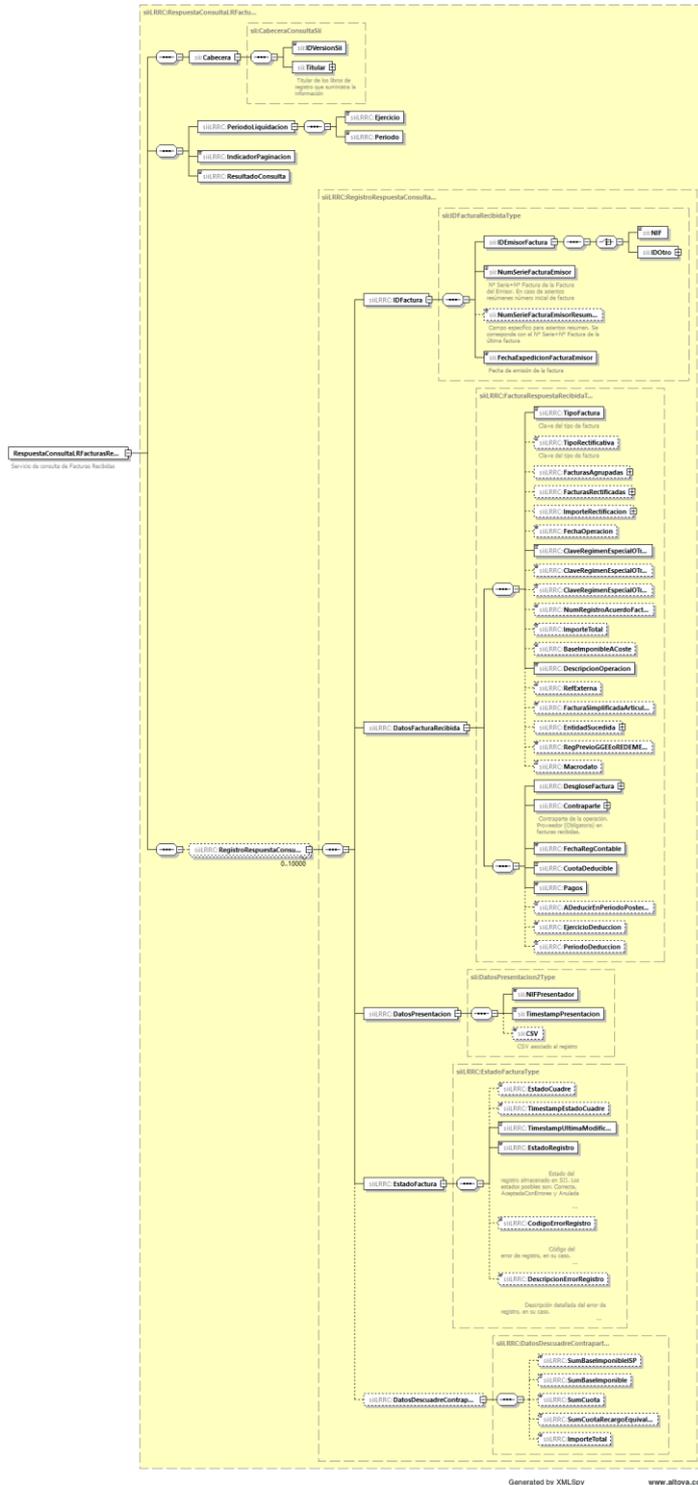

Generated by XMLSpy

		DescripcionErrorRegistro			Detailed description of the duplicate record error	Alphanumeric(500)

6.3.15.

6.4. *Functional specification of the consultation of information filed.*

It is possible to consult records filed previously for the registers of invoices received and issued, capital goods, tax-related transactions charged on an annual basis and certain intra-EU transactions; said consultations must be performed by filtering by tax year and period. Furthermore, you will also have the option of filtering by other fields, to be able to limit the list of invoices obtained with greater precision.

It is also possible to consult the collections/payments of invoices sent and received in registers, filtering by the identification of the invoice that contains the collections/payments to be consulted.

A maximum of 10,000 records will be returned. If there is more data pending in the response, the service will have to be used in a paginated manner (See 6.4.15 Paginated consultation) performing new consultations with the identification of the last record obtained in order to obtain the subsequent records ordered by submission date.

6.4.18. Paginated consultation

When carrying out a consultation, if there is more data pending in the response (the consultation service will return a maximum of 10,000 records), the service will have to be used in a paginated manner. In this case, the <IndicadorPaginacion> field in the response will contain an "S", to state that new consultations must be carried out if you wish to obtain the rest of the records.

To obtain the rest of the pending records, a new consultation request must be sent filling in the <ClavePaginacion> field with the record code, based on which the rest will be obtained. If the <ClavePaginacion> block is not filled in, the consultation will respond with the first 10,000 records ordered by submission date.

For requests to consult the registers of invoices received and issued, capital goods, transactions in cash and certain intra-EU transactions, the <ClavePaginacion> field must be filled in by introducing the last record returned in response to the previous consultation.

For collections and payments, if you wish to obtain the collections/payments pending from a previous consultation, the <ClavePaginacion> field in the new consultation must be filled in using the <ClavePaginacion> field returned in the response to the previous consultation.

6.4.19. Verification information on invoices issued/received in the consultation of invoices submitted

Each invoice issued/received will be checked against the corresponding invoice issued/received that was filed by the client/supplier, according to the following section.

The invoice issued/received will have one of the following verification statuses:

- **Non-verifiable.** These invoices cannot be verified.
- **In process of verification.** "Temporary" status between the registration/modification of the invoice and its verification attempt.
- **Not verified.** The issuer or recipient has not registered the invoice (the issuer's NIF, the issuer's invoice number and issue date do not match).
- **Partially verified.** The issuer and recipient have registered the invoice (the issuer's NIF, the issuer's invoice number and issue date match), but there are discrepancies in some of the invoice data.

- **Verified.** The issuer and recipient have registered the invoice (the issuer's NIF, the issuer's invoice number and issue date match) with the same invoice data.

Invoices with a "Partially verified" status will include the <DatosDescuadreContraparte> block in the consultation response, with the information declared by the counter party (client/supplier) that does not match that included in the register declared by the taxpayer.

The following counter party data will be displayed if there is a discrepancy when carrying out the consultation, in the case that the invoice is partially verified:

- Sum of Taxable Base in transactions with reverse charge
- Sum of Taxable Base in transactions without reverse charge
- Sum of Tax Payable, only for transactions without reverse charge
- Sum of Equivalence Surcharge, only for transactions without reverse charge
- Total invoice amount.

Example: A consultation of the issued invoices register yields a "partially verified" invoice because the "sum of equivalence surcharge" for the invoice consulted does not match the "sum of equivalence surcharge" declared by the client in their received invoices register. In this case, the response will include the <DatosDescuadreContraparte> block with the "sum of equivalence surcharge" field declared by the client in their received invoices register.

In the consultation response for the partially verified invoice, this block would be included with the value of the "sum of equivalence surcharge" declared by the client

6.5. *Functional specification of the consultation of the invoices reported by clients and suppliers.*

Consultation of invoices reported by our clients and suppliers is allowed. It is possible to narrow down the list of invoices to be obtained by means of different filtering parameters: balance status, client/supplier, date of issue, transaction date, etc.

The different consultations of invoices reported by clients/suppliers function by year/ "**charging**" period, details of which are obtained from the date of transaction or, otherwise, the issuance date.

A maximum of 10,000 records will be returned. If there is more data pending in the response, the service will have to be invoked in a paginated way by making new consultations with the identifier of the last record obtained, in order to obtain the following records sorted by date of submission.

Version: 1.1

L22 → Invoice type R5 or F4 with reduction in the taxable base for the granting of coupons, rebates or discounts when only the original invoice is issued

VALUES	DESCRIPTION
S	Yes
N	No

L23 → Invoice verification status

VALUES	DESCRIPTION
1	Non-verifiable. These invoices cannot be verified.
2	In process of verification. "Temporary" status between the registration/modification of the invoice and its verification attempt.
3	Not verified. The issuer or recipient have not registered the invoice (the issuer's NIF, the issuer's invoice number and issue date do not match).
4	Partially verified. The issuer and recipient have registered the invoice (the issuer's NIF, the issuer's invoice number and issue date match), but there are discrepancies in some of the invoice data.
5	Verified. The issuer or recipient have registered the invoice (the issuer's NIF, the issuer's invoice number and issue date match) with the same invoice data.

L24 → Registered invoice status (Obtained in response to a consultation of previously submitted records or when a duplicate record is rejected for registration)

Taxation IT Department
Subdirectorato General for Applications

SII Application

Version: 1.1

Field **<EstadoRegistro>** of the response to a consultation or in the **<RegistroDuplicado>** block of the response to a registration when the record is rejected as a duplicate. Specifies the status of the register, once registered in the system

VALUES	DESCRIPTION
Correct	The invoice registered is completely correct.
AceptadaConErrores	The invoice registered has some errors. See detail of error (L16).
Cancelled	The invoice registered has been cancelled through a removal operation

L25 → Issued by third parties in accordance with a regulatory requirement

VALUES	DESCRIPTION
S	Yes
N	No

L26 → Simplified invoice Article 7.2 and 7.3 RD 1619/2012.

VALUES	DESCRIPTION
S	Yes
N	No

L27 → Invoice without identification of addressee Article 6.1.d) RD 1619/2012

VALUES	DESCRIPTION
--------	-------------

Taxation IT Department
Subdirectorato General for Applications

SII Application

Version: 1.1

S	Yes
N	No

L28 → Identifier that specifies those billing records with difficulties to be sent on time because there is no record of the change of status to GGEE, of the inclusion in REDEME or of a change in the inspection competence.

VALUES	DESCRIPTION
S	Yes
N	No

L29 → Invoices with invoice amount above a threshold of €100,000,000

VALUES	DESCRIPTION
S	Yes
N	No

L30 → Invoice matching status in the consultation of the invoices reported by clients and suppliers

VALUES	DESCRIPTION
3	Not verified. The issuer or recipient have not registered the invoice (the issuer's NIF, the issuer's invoice number and issue date do not match).
4	Partially verified. The issuer and recipient have registered the invoice (the issuer's NIF, the issuer's invoice number and issue date match), but there are discrepancies in some of the invoice data.
5	Verified. The issuer or recipient have registered the invoice (the issuer's NIF, the issuer's

invoice number and issue date match) with the same invoice data.

L31 → Taxpayer Code

VALUES	DESCRIPTION
V	Seller
A	Purchaser

L32 → Transaction Type

VALUES	DESCRIPTION
01	Issuance
02	Replacement of the initial addressee
03	Delivery to the initial recipient or substitute
04	Delivery different recip. Initial or substitute
05	Issue to another country
06	Destruction, loss, theft
07	Return to TAI
08	12-month period elapses without acquisition by the initial or substitute consignee
09	Receipt
10	Acquisition
11	Withdrawal of goods by the seller
12	Destruction or disappearance

L33 → Identifier specifying investment property.

**Taxation IT Department
Subdirectorato General for Applications**

SII Application

Version: 1.1

VALUES	DESCRIPTION
S	Yes
N	No

L34 → Identifier specifying whether the invoice is deducted in a later period

VALUES	DESCRIPTION
S	Yes
N	No

6.3. Values permitted in numeric fields.

For numeric values, leading zeros should not be used (for example, 01, 001 or 01230, would be incorrect; in their place, 1, 1 and 1230 should be used respectively). After the decimal point, trailing zeros may only be used to indicate decimal precision (for example, 12345.7 is the same as 12345.70 and 12345 is the same as 12345.0 and as 12345.00).

(Note: as part of date formats, the numeric fields expressed by each of the components must feature leading zeros up to the required number of digits, for example: 02-07-2014 (and not 2-7-2014).

6.4. Clarification concerning special escape characters.

In the event it is necessary to state one of the following characters in a value of an XML element, they should be escaped with the following XML element:

Character	Escape character
&	&
<	<

7. Annexe I: Definition of services and schemes (Test environment)

Contains the definition of the services and schematics of version 1.1

9.1.1.4.Example XML message for registration when the counter party is not registered

For cases in which an issued invoice is rejected because the counter party (NIF and name) is not registered in the AEAT, you will be able to send the invoice, in a second attempt, providing the NIF in the <IdOtro> block with the following content:

Country code: [ES](#)
ID Code: [07. Not registered](#)
ID Number: [Invoice recipient NIF not registered](#)
Surnames and first name: [Invoice recipient name not registered](#)

In this case, the invoice will appear in SII as accepted with errors. In all cases, a format error in the NIF will mean the rejection of the invoice.

Input XML

```

9.1.2.2.Example import registration XML message

Under Supplier identification details, enter the details for the importer and register holder.

The reference number that appears in the DUA itself and the date of admission by the Customs Administration, respectively, should be recorded as the invoice number and date of issue

Example: An import with DUA number "15ES00418930051657" is being registered, which was admitted on 10/03/2017. The VAT taxable base is €7,250, the VAT amount settled by Customs is 1,522.50 euros.

- Invoice number: 15ES00418930051657
- Issue date: 10/03/2017
- Transaction date (not filled in)
- Invoice Code: F5.

- **Transaction code: 01.**
- **Taxable base €7250.**
- **Rate 21 %**
- **Charge 1522.5**
- **Description: purchase of 150 t-shirts.**
- **Deductible fee: 1522.5**

9.1.2.3.Example XML registration message for type F6-Accounting support material and support documents for entitlement to the deduction

Example: Public property sales deed when invoice has been issued. The public deed also constitutes an invoice with protocol number 1234/2017 and deed date 01/04/2017.

In the register of invoices received:

- Invoice number:1234/2017

- Date of issue: 01/04/2017
- Counter party: NIF A84532501
- Name or company name: CompanyXXXXX
- Fiscal year: 2017
- Period: 04

Date of transaction (not filled in)

Invoice code: F6

Transaction code: 01.

- Total amount: €110,000.

9.1.8. Registration of Certain intra-EU Transactions Sale of goods on consignment

Example 1: Entrepreneur A established in the tax territory and entrepreneur B established in Germany, VAT No DE111111111, entered into a consignment sale agreement in 2019, whereby entrepreneur A undertakes to place goods at B's disposal in a warehouse located in Germany *and managed by B*. B undertakes to purchase the goods within 12 months of the goods' arrival at the warehouse.

The warehouse address is (C/XXXXXXX).

On 1 **March** 2020 A sends goods (10,000 units) worth 10,000 euros to the warehouse in Germany. The goods arrive at the warehouse on 3 **March**.

The transfer of the goods shall be recorded as follows:

9.1.8.1.Example Sale of goods on consignment

9.1.10. Registration of Corrected Invoice due to replacement “S” in the Invoices issued register

Rectification invoice. Correction of an incorrect invoice type: due to replacement S	Transmission of a new invoice with: Operation type A0. R1, R2 or R3 invoice type codes. Corrected invoice type = "S". This is a new unique invoice code, different from the original invoice.	The unique corrected invoice code must not have existed previously. The replaced amounts (Amended base and taxable amount) must be introduced Identifying the list of invoices amended in the field is optional.	Registration of the corrected invoice. It may be classed as correct or incorrect.
---	---	---	---

When the rectification is due to "replacement" it must be notified and the amount of the rectification also stated. This information can be introduced:

- Option 1: Providing information on a new record with the correct amounts after correcting the “taxable base”, “tax payable” and where applicable “surcharge” fields and in turn, the corrected amounts compared to the original invoice in the “corrected base”, “corrected tax payable” and where applicable “corrected surcharge” fields.
- Option 2: Providing information on a new record with the correct amounts after correcting the “taxable base”, “tax payable” and where applicable “surcharge” fields and another record in which the corrected amounts appear.

9.1.10.1.Example XML registration message for corrected invoices due to replacement “Option 1”

Example operation:

Example: Invoice No. 1 with a taxable base of €1,000 and tax payable of €210 needs to be corrected.

OPTION 1: *The amendment due to replacement would entail issuing a corrected invoice with a taxable base of €800 and tax payable of €168, in which it would be stated that the correction made comes to the value of €1000 for the corrected taxable base and €210 for the corrected tax payable.*

- *Two additional fields with the "corrected taxable base" (1,000) and the "corrected tax payable" (210), would be included regardless of their sign.*
- *Total amount: the valid final total would be 968.*
- *VAT breakdown: taxable base: 800, tax payable 168.*

9.1.11. Registration of Corrected Invoice due to a “I” difference in the Invoices issued register

Rectification invoice. Correction of an incorrect invoice type: due to a difference	Transmission of a new invoice with: Operation type A0. R1, R2 or R3 invoice type codes. Corrected invoice type = "I". This is a new unique invoice code, different from the original invoice.	The corrected invoice identification must not have existed previously. The list of corrected invoices may or may not be introduced in the Corrected invoices field.	Registration of the corrected invoice. It may be classed as correct or incorrect.
---	--	---	---

The record of this correction due to a “difference” shall be undertaken REGISTERING a new invoice and stating in the invoice type field that this is a “corrected invoice” and in the corrected invoice type field that it is “due to a difference”. In this case, the amounts replaced in the “corrected taxable base” and “corrected tax payable” should not be filled in; these fields are mandatory for corrections due to replacement. Identifying the corrected invoices is optional.

9.1.11.1.Example XML registration message for corrected invoices due to a difference

Example operation:

Invoice No. 1 with a taxable base of €1,000 and tax payable of €210 needs to be corrected.

The correction due to a difference would entail issuing an invoice with a taxable base of €-200.

The fields and codes to be entered in the Register of Invoices Issued are:

- *Communication Type: A0*
- *Invoice Type: Rx*
- *Correction Type: I*
- *Total amount: the total corrected amount would be -242.*
- *VAT breakdown: taxable base: -200, tax accrued – 42.*

9.1.12. Removal of an incorrect Invoice sent previously

Removal of an incorrect invoice sent previously.	Transmission of the invoice with the unique original invoice code	The unique invoice code must not have existed previously. It must not have been removed.	Removal of the invoice
--	---	--	------------------------

The removal of an invoice must indicate the year and period of the registration and, if it has been modified, the one indicated in the last modification.

9.1.12.1. Example invoice removal XML message

Input XML

```
<?xml version="1.0" encoding="UTF-8"?>
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
xmlns:siiLR="https://www2.agenciatributaria.gob.es/static_files/common/internet/dep/aplicaciones/es/aeat/ssii/fact/ws/SuministroLR.xsd"
xmlns:sii="https://www2.agenciatributaria.gob.es/static_files/common/internet/dep/aplicaciones/es/aeat/ssii/fact/ws/SuministroInformacion.xsd">
  <soapenv:Header/>
```

9.1.13. Supply of collections for an invoice registered in the Invoices issued register

Suministro de Cobros de una factura expedida en Regimen especial de criterio de caja.	Envío de la información de la factura con la clave única de la factura original y suministro del cobro/s a realizar sobre la misma	La clave única de la factura debe existir previamente en el libro de facturas expedidas y el titular debe ser el mismo. No debe estar dada de baja. Debe tener asociado el Régimen especial de criterio de caja	Se acumulan en la factura los importes recibidos a los existentes (pueden ser positivos o negativos)
---	--	---	--

In the supply of collections and payments, there are no specific record correction operations (A1) or removals. If you wish to cancel a collection, the collection to be cancelled should be sent with a minus amount.

The response to the supply of collections and payments is by invoice, accepting or rejecting all collections and payments provided on an invoice. Therefore, either all the collections/payments sent are accepted or all the collections/payments on the invoice sent are rejected.

9.1.13.1. Example collection registration XML message (plus amount)

Input XML

```
<sii:Fecha>31-05-2017</sii:Fecha>  
<sii:Importe>25</sii:Importe>  
<sii:Medio>02</sii:Medio>  
<sii:Cuenta_O_Medio>125347</sii:Cuenta_O_Medio>

```

9.1.14. Provision of additional property information for the register of issued invoices.

Location	Transaction	Terms and Conditions	Consequences
Update of Additional Property Information. For the code ClaveRegimenEspecialOTrascendencia= "12" or "13"	Sending an invoice with the unique code of the original invoice and the additional properties to be registered	The unique invoice code must not have existed previously. It must not have been removed. Must have the code ClaveRegimenEspecialOTrascendencia= "12" or "13"	Additional properties have been updated

When an invoice has more than 15 properties, which are the ones allowed in the XML sending of issued invoices, a specific XML will be sent with the rest of the properties.

There are no specific operations for modifications (A1) or removals in the provision of additional information on buildings. Each shipment updates the additional properties in the invoice, i.e. it updates the system with the "picture" of the last shipment made.

The response to the provision of additional property information is at invoice level and all properties provided in an invoice are either accepted or rejected. Therefore, either all properties shipped are accepted or all properties in the shipment are rejected.

9.1.14.1. Example XML message for the Provision of Additional Property Information

Input XML

```

9.2. Operation: Invoice amendments due to errors regarding invoice data

9.2.1. Amendment of an invoice in the Invoices issued register (caused by a recording error)

Correction of a recording error in the invoice. (includes the correction of recording errors in corrected invoices)	Transmission of an invoice with the unique original invoice code and operation type A1	The unique invoice code must not have existed previously.	Updating the invoice with the new data received.
---	---	---	--

Invoices that have been removed may be amended. The new status of the amended invoice will be “Accepted” or “Accepted with errors”.

9.4. Operation: Invoice amendments due to errors regarding invoice data concerning invoice identification data (IDFactura block of the .xsd)

Operations to be carried out as part of this task are as follows:

Situación	Operación	Condiciones	Consecuencias
Baja de una factura enviada previamente que no procede.	Envío de la factura con la clave única de la factura original	La clave única de la factura debe existir previamente y el titular debe ser el mismo. No debe estar dada de baja.	Baja de la factura
Alta inicial de una factura	Envío de una factura con el tipo de operación A0	La clave única de la factura no debe existir previamente.	Alta de la factura. Podrá quedar como correcta o como errónea.

9.4.1. Removal of an invoice due to errors regarding identification data

9.4.1.1. Example removal of an invoice XML message due to errors regarding identification data

`</soapenv:Body>`
`</soapenv:Envelope>`

9.4.2. Registration of a new invoice

As per the example in section 8.1.1

9.5. Operation: Consultation of invoices submitted previously

9.5.1. Consultation of invoices submitted previously, ordered by submission date

Consultation of invoices submitted previously. The service will return a maximum of 10,000 invoices ordered by submission date

9.5.1.1.Example of previously submitted invoices issued consultation XML message

10. Appendix III: Content to be sent in invoices from the first half of 2017 with retroactive effect

The schemes and WSDLs defined for sending information from the first half of the year are the same as those that have been defined for the normal functioning of SII.

Discrepancies between the mandatory fields defined in the schemes and the information required for the first half of the year shall be settled by providing default values in the following XML fields.

10.1. Default content for issued invoices

FIELD	DEFAULT VALUE
RegistroLRFacturasEmitidas.FacturaExpedida.ClaveRegimenEspecialOTrascendencia	16
RegistroLRFacturasEmitidas.FacturaExpedida.DescripcionOperacion	Register from first half of year
RegistroLRFacturasEmitidas.FacturaExpedida.TipoDesglose.DesgloseFactura.Sujeta.NoExenta. TipoNoExenta	S1

10.2. Example XML message from first half of year for invoices issued register

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
