INTRODUCTION – ENHANCING THE EU SUSTAINABLE FINANCE FRAMEWORK

Climate change and environmental degradation are defining global challenges of our time. Countries across the world recognise the urgent need to address these challenges, as demonstrated by their support for the Paris Agreement and the UN's 2030 Agenda for Sustainable Development 1, and are setting ambitious targets. Based on the European Green Deal, the EU has made a number of ambitious commitments, in particular to become the first climate-neutral continent by 2050 and to reduce greenhouse gas emissions by at least 55% by 2030 compared to 1990 levels 2. The EU also aims to strengthen its resilience to climate change, to reverse biodiversity loss and the broader degradation of the environment and to leave nobody behind in the process. To reach these targets, the alignment of all sources of finance – public and private, national and multilateral – is required. The EU needs to cooperate globally and work with low- and middle-income countries in their transition.

The EU sustainable finance framework will play a key role in meeting these targets and supporting a sustainable recovery from the COVID pandemic. Europe will need an estimated EUR 350 billion in additional investment per year over this decade to meet its 2030 emissions-reduction target in energy systems alone, alongside the EUR 130 billion it will need for other environmental goals $\underline{3}$. Investment in unsustainable activities and assets are increasingly likely to become stranded, as climate and environmental challenges become ever more material. The insufficient integration of these risks hampers reallocation of resources and risks leading to disruptive readjustments in the future, with implications for financial stability. Accordingly, environmental regulation must be complemented by a sustainable finance framework which channels finance to investment that reduces exposure to these climate and environmental risks $\underline{4}$.

The framework for sustainable finance can make it easier for public authorities to raise sustainable capital. The EU is already taking significant steps in this regard. Under the 2021-2027 Multiannual Financial Framework (MFF) and Next-Generation-EU (NGEU) \underline{s} , the Union aims to spend up to EUR 605 billion on projects addressing the climate crisis and EUR 100 billion in projects supporting biodiversity. Of the EUR 750 billion allocated for Next-Generation-EU, 30% will be raised through issuance of NGEU green bonds. As the 'EU climate bank', the European Investment Bank Group has also taken important steps to support the transition $\underline{6}$.

As the scale of investment required is well beyond the capacity of the public sector, the main objective of the sustainable finance framework is to channel private financial flows into relevant economic activities. Private interest in sustainable investment has grown considerably in recent years but requires a framework for sustainable finance which is clear, consistent and robust. The EU is putting that framework in place.

The sustainable finance framework and the Capital Markets Union reinforce each other, creating more opportunities for businesses and investors. Well-integrated and efficient capital markets should act as a catalyst for effective mobilisation and allocation of capital towards sustainable investments 7. In turn, the momentum of the sustainable finance policy agenda boosts the importance and urgency of the efforts to build a truly single and sustainable market for capital in the European Union.
